**S.E. (Part – I) (New/Old) (CBCS) Examination Nov/Dec-2019
 Electronics & Telecommunication Engineering
 ENGINEERING MATHEMATICS – III**

Day & Date: Saturday, 07-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.
 2) Use of non programmable scientific calculator allowed.
 3) Figures to the right indicate full marks.
 4) Assume suitable data if necessary and state it clearly.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) The general solution of $(D^4 + 6D^2 + 9)y = 0$ is _____.
- a) $y = (c_1 + c_2x) e^x + (c_3 + c_4x) e^{-x}$
 b) $y = (c_1 + c_2x) \cos \sqrt{3} x + (c_3 + c_4x) \sin \sqrt{3} x$
 c) $y = (c_1 + c_2x) e^{-x} + (c_3 + c_4x) e^x$
 d) $y = (c_1 + c_2 \cos x) e^x + (c_3 + c_4 \sin x) e^x$
- 2) The particular integral of $(D^4 - n^4)y = \sin nx$ is
- a) $\frac{x}{4n^3} \sin nx$ b) $-\frac{x}{4n^3} \cos nx$
 c) $\frac{x}{4n^3} \cos nx$ d) $-\frac{x}{4n^3} \sin nx$
- 3) If $f(t) = f(t + T)$ where T is period of $f(t)$ then $L\{f(t)\} =$ _____.
- a) $\frac{1}{1 - e^{-Ts}} \int_0^T e^{-st} f(t) dt$ b) $\frac{1}{1 - e^{Ts}} \int_0^T e^{-st} f(t) dt$
 c) $\frac{1}{1 - e^{st}} \int_0^T e^{-sT} f(t) dt$ d) $\frac{1}{1 - e^{-st}} \int_0^T e^{sT} f(t) dt$
- 4) $L^{-1}\left\{\frac{s+3}{s^2+3^2}\right\} =$ _____.
- a) $\cos 3t$ b) $\sin 3t$
 c) $3t + \cos 3t$ d) $\cos 3t + \sin 3t$

- 5) If $L\{f_1(t)\} = \phi_1(s)$ & $L\{f_2(t)\} = \phi_2(s)$ then $L^{-1}\{\phi_1(s) \cdot \phi_2(s)\} = \underline{\hspace{2cm}}$.
- a) $\int_0^t f_1(u)f_2(t-u)du$ b) $\int_0^\infty f_1(u)f_2(t-u)du$
- c) $\int_0^t f_1(u)f_2(u)du$ d) $\int_0^\infty f_1(u)f_2(u)du$
- 6) If $\bar{x} = 70, \bar{y} = 149, b_{yx} = 0.7$ then the equation of the line of regression of y on x is
- a) $y = 0.7x + 60$ b) $y = 0.7x + 80$
c) $y = 0.7x + 100$ d) $y = 0.7x + 120$
- 7) If a random variable x has a Poisson distribution with mean 3, then $P(x = 4) = \underline{\hspace{2cm}}$.
- a) 0.11 b) 0.13
c) 0.15 d) 0.17
- 8) In solving algebraic and transcendental equation, which of the following method is called method of chord?
- a) Newton's Raphson b) Regula Falsi
c) Iteration method d) Bisection method
- 9) In solving simultaneous linear equation, which of the following method is direct method?
- a) Gauss elimination b) Gauss Jacobi's
c) Newton's Raphson d) Gauss Seidal
- 10) Fourier series of $f(x) = 1 - x^2$ in $(-1, 1)$ contains .
- a) only sine series b) only cosine series
c) both sine and cosine series d) none of these
- 11) In the interval $(0, 2)$ the constant term in the Fourier series of $f(x) = x$ is .
- a) 1 b) 2
c) 3 d) 0
- 12) Fourier cosine transform of e^{-x} for $x \geq 0$ is .
- a) $\frac{s}{1+s^2}$ b) $\sqrt{\frac{2}{\pi}} \frac{s}{s^2+1}$
c) $\sqrt{\frac{\pi}{2}} \frac{1}{1+s^2}$ d) $\sqrt{\frac{2}{\pi}} \frac{1}{1+s^2}$

- 13) If $Z\{f(k)\} = F(z)$, then $Z\{k \cdot f(k)\} =$ _____.
- | | |
|--------------------------|-------------------------|
| a) $\frac{dF(z)}{dz}$ | b) $z \frac{dF(z)}{dz}$ |
| c) $-z \frac{dF(z)}{dz}$ | d) $-\frac{dF(z)}{dz}$ |
- 14) For $|z| > 1$, the inverse z-Transform of $\frac{z}{z-1}$ is _____.
- | | |
|------------------|--------------------|
| a) $1, k \geq 0$ | b) $2^k, k \geq 0$ |
| c) $2^k, k < 0$ | d) not exists |

S.E. (Part – I) (New/Old) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ENGINEERING MATHEMATICS – III

Day & Date: Saturday, 07-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicate full marks.
 3) Assume suitable data if necessary.
 4) Use of non-programmable calculators is allowed.

Section – I

Q.2 Attempt any three of the following question.

09

- a) In an experiment with 500 seeds in group of 5 the following results were obtained

$x:$	0	1	2	3	4	5	Total
$f:$	10	70	150	160	80	30	500

Where f denote the number of groups in which x seeds germinated. Fit a binominal distributed to the data.

- b) Solve $(D^2 - 5D + 6)y = \sin 3x$
 c) Find $L\{te^{-3t} \sin t\}$
 d) Evaluate $\int_0^{\infty} \frac{\sin 2t}{t} dt$ by using Laplace transform.
 e) Find inverse Laplace transform of $\log\left(1 + \frac{a^2}{s^2}\right)$

Q.3 Attempt any three of the following question..

09

- a) If the probability that an individual suffers a bad reaction from a particular injection is 0.001, determine the probability that out of 2000 individuals
 1) exactly four
 2) more than two individuals will suffer from bad reaction
 b) Solve $(D^2 + 2D + 1)y = x \cos x$
 c) Find $L\left\{\frac{e^{-3t} \sin 5t}{t}\right\}$
 d) Find the Laplace transform of $(1 + 2t - 3t^2 + 4t^3).H(t - 2)$.
 e) Using convolution theorem find inverse Laplace transform of $\frac{1}{s.(s^2+4)}$

Q.4 Attempt any two of the following question.

- a) From the following data find line of regression of x on y & estimate x when $y = 105$

$x:$	44	58	49	46	58	56	48	46	48	47
$y:$	88	114	102	113	91	89	102	93	114	94

- b) An electrical circuit consists of an inductance L , a condenser of capacity C & an e.m.f. $E = E_0 \cos wt$ so that the charge Q satisfies the differential equation

$$\frac{d^2Q}{dt^2} + \frac{Q}{LC} = \frac{E_0}{L} \cos wt$$

If $w = \frac{1}{\sqrt{LC}}$ & initially $Q = Q_0$ at $t = 0$ & the current is $i = i_0$ at $t = 0$. show that the charge Q at time t is given by

$$Q = Q_0 \cos wt + \frac{i_0}{w} \sin wt + \frac{E_0}{2Lw} t \sin wt$$

- c) Solve by using Laplace transform

$$(D^2 + 25)y = 10 \cos 5t, y(0) = 2 \text{ \& } y'(0) = 0$$

Section-II**Q.5 Attempt any three of the following questions.**

09

- a) Solve the following set of equations by Gauss Elimination method.
 $3x + 4y + 5z = 18, 2x - y + 8z = 13, 5x - 2y + 7z = 20.$
- b) Solve the equation $x \tan x + 1 = 0$ by Regula Falsi method starting with $a = 2.5$ and $b = 3$ correct to three decimal places.
- c) Expand x^2 as a Fourier series in interval $(-1, 1)$
- d) Find z -transform of the sequence
 $f(k) = 3^k, \quad k < 0$
 $= 2^k, \quad k \geq 0$
- e) Find the Fourier Sine transform of $f(x) = 2e^{-5x} + 5e^{-2x}$ where $x \geq 0$

Q.6 Attempt any three of the following questions.

09

- a) Find a positive real root of $2x^3 - 3x - 6 = 0$ by Newton's Raphson method correct to five places of decimal.
- b) Obtain half range sine series of $f(x) = lx - x^2$ in the interval $(0, l)$.
- c) Find z -transform of the sequence $\{k^2 a^k\}$ where $k \geq 0$
- d) Express the function $f(x) = 1 \quad 0 \leq x < \pi$
 $= 0 \quad x > \pi$
as a Fourier sine integral representation
- e) Solve the following system of equation by Gauss-Seidal method correct to three decimal places.
 $x + y + 54z = 110, \quad 27x + 6y - z = 85, \quad 6x + 15y + 2z = 72$

Q.7 Attempt any two of the following questions.

a) Find the Fourier series of the function

$$\begin{aligned} f(x) &= \pi x & 0 < x < 1 \\ &= 0 & 1 < x < 2 \end{aligned}$$

b) Find inverse z-transform of $\frac{2z^2-5z}{(z-2)(z-3)}$ where $|z| > 3$

c) Find the Fourier transform of the function

$$\begin{aligned} f(x) &= 1 - x^2 & |x| \leq 1 \\ &= 0 & |x| > 1 \end{aligned}$$

Hence evaluate

$$\int_0^{\infty} \left(\frac{\sin x - x \cos x}{x^3} \right) \cos\left(\frac{x}{2}\right) dx$$

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) In solving algebraic and transcendental equation, which of the following method is called method of chord?

a) Newton's Raphson	b) Regula Falsi
c) Iteration method	d) Bisection method

- 2) In solving simultaneous linear equation, which of the following method is direct method?

a) Gauss elimination	b) Gauss Jacobi's
c) Newton's Raphson	d) Gauss Seidal

- 3) Fourier series of $f(x) = 1 - x^2$ in $(-1, 1)$ contains _____.

a) only sine series	b) only cosine series
c) both sine and cosine series	d) none of these

- 4) In the interval $(0, 2)$ the constant term in the Fourier series of $f(x) = x$ is _____.

a) 1	b) 2
c) 3	d) 0

- 5) Fourier cosine transform of e^{-x} for $x \geq 0$ is _____.

a) $\frac{s}{1+s^2}$	b) $\sqrt{\frac{2}{\pi}} \frac{s}{s^2+1}$
c) $\sqrt{\frac{\pi}{2}} \frac{1}{1+s^2}$	d) $\sqrt{\frac{2}{\pi}} \frac{1}{1+s^2}$

 d) Find the Laplace transform of $(1 + 2t - 3t^2 + 4t^3).H(t - 2)$.
 e) Using convolution theorem find inverse Laplace transform of $\frac{1}{s.(s^2+4)}$

Q.4 Attempt any two of the following question.

- a) From the following data find line of regression of x on y & estimate x when $y = 105$

x :	44	58	49	46	58	56	48	46	48	47
y :	88	114	102	113	91	89	102	93	114	94

- b) An electrical circuit consists of an inductance L , a condenser of capacity C & an e.m.f. $E = E_0 \cos wt$ so that the charge Q satisfies the differential equation

$$\frac{d^2Q}{dt^2} + \frac{Q}{LC} = \frac{E_0}{L} \cos wt$$

If $w = \frac{1}{\sqrt{LC}}$ & initially $Q = Q_0$ at $t = 0$ & the current is $i = i_0$ at $t = 0$. show that the charge Q at time t is given by

$$Q = Q_0 \cos wt + \frac{i_0}{w} \sin wt + \frac{E_0}{2Lw} t \sin wt$$

- c) Solve by using Laplace transform

$$(D^2 + 25)y = 10 \cos 5t, y(0) = 2 \text{ \& } y'(0) = 0$$

Section-II**Q.5 Attempt any three of the following questions.**

09

- a) Solve the following set of equations by Gauss Elimination method.
 $3x + 4y + 5z = 18, 2x - y + 8z = 13, 5x - 2y + 7z = 20.$
- b) Solve the equation $x \tan x + 1 = 0$ by Regula Falsi method starting with $a = 2.5$ and $b = 3$ correct to three decimal places.
- c) Expand x^2 as a Fourier series in interval $(-1, 1)$
- d) Find z -transform of the sequence
 $f(k) = 3^k, k < 0$
 $= 2^k, k \geq 0$
- e) Find the Fourier Sine transform of $f(x) = 2e^{-5x} + 5e^{-2x}$ where $x \geq 0$

Q.6 Attempt any three of the following questions.

09

- a) Find a positive real root of $2x^3 - 3x - 6 = 0$ by Newton's Raphson method correct to five places of decimal.
- b) Obtain half range sine series of $f(x) = lx - x^2$ in the interval $(0, l)$.
- c) Find z -transform of the sequence $\{k^2 a^k\}$ where $k \geq 0$
- d) Express the function $f(x) = 1 \quad 0 \leq x < \pi$
 $= 0 \quad x > \pi$
 as a Fourier sine integral representation
- e) Solve the following system of equation by Gauss-Seidal method correct to three decimal places.
 $x + y + 54z = 110, \quad 27x + 6y - z = 85, \quad 6x + 15y + 2z = 72$

Q.7 Attempt any two of the following questions.

a) Find the Fourier series of the function

$$\begin{aligned} f(x) &= \pi x & 0 < x < 1 \\ &= 0 & 1 < x < 2 \end{aligned}$$

b) Find inverse z-transform of $\frac{2z^2-5z}{(z-2)(z-3)}$ where $|z| > 3$

c) Find the Fourier transform of the function

$$\begin{aligned} f(x) &= 1 - x^2 & |x| \leq 1 \\ &= 0 & |x| > 1 \end{aligned}$$

Hence evaluate

$$\int_0^{\infty} \left(\frac{\sin x - x \cos x}{x^3} \right) \cos\left(\frac{x}{2}\right) dx$$

- 6) Fourier series of $f(x) = 1 - x^2$ in $(-1, 1)$ contains _____.
 a) only sine series b) only cosine series
 c) both sine and cosine series d) none of these
- 7) In the interval $(0, 2)$ the constant term in the Fourier series of $f(x) = x$ is _____.
 a) 1 b) 2
 c) 3 d) 0
- 8) Fourier cosine transform of e^{-x} for $x \geq 0$ is _____.
 a) $\frac{s}{1+s^2}$ b) $\sqrt{\frac{2}{\pi}} \frac{s}{s^2+1}$
 c) $\sqrt{\frac{\pi}{2}} \frac{1}{1+s^2}$ d) $\sqrt{\frac{2}{\pi}} \frac{1}{1+s^2}$
- 9) If $z\{f(k)\} = F(z)$, then $Z\{k \cdot f(k)\} =$ _____.
 a) $\frac{dF(z)}{dz}$ b) $z \frac{dF(z)}{dz}$
 c) $-z \frac{dF(z)}{dz}$ d) $-\frac{dF(z)}{dz}$
- 10) For $|z| > 1$, the inverse z-Transform of $\frac{z}{z-1}$ is _____.
 a) $1, k \geq 0$ b) $2^k, k \geq 0$
 c) $2^k, k < 0$ d) not exists
- 11) The general solution of $(D^4 + 6D^2 + 9)y = 0$ is _____.
 a) $y = (c_1 + c_2x) e^x + (c_3 + c_4x) e^{-x}$
 b) $y = (c_1 + c_2x) \cos \sqrt{3} x + (c_3 + c_4x) \sin \sqrt{3} x$
 c) $y = (c_1 + c_2x) e^{-x} + (c_3 + c_4x) e^x$
 d) $y = (c_1 + c_2 \cos x) e^x + (c_3 + c_4 \sin x) e^x$
- 12) The particular integral of $(D^4 - n^4)y = \sin nx$ is
 a) $\frac{x}{4n^3} \sin nx$ b) $-\frac{x}{4n^3} \cos nx$
 c) $\frac{x}{4n^3} \cos nx$ d) $-\frac{x}{4n^3} \sin nx$

13) If $f(t) = f(t + T)$ where T is period of $f(t)$ then $L\{f(t)\} = \underline{\hspace{2cm}}$.

a) $\frac{1}{1 - e^{-Ts}} \int_0^T e^{-st} f(t) dt$

b) $\frac{1}{1 - e^{Ts}} \int_0^T e^{-st} f(t) dt$

c) $\frac{1}{1 - e^{st}} \int_0^T e^{-sT} f(t) dt$

d) $\frac{1}{1 - e^{-st}} \int_0^T e^{sT} f(t) dt$

14) $L^{-1}\left\{\frac{s+3}{s^2+3^2}\right\} = \underline{\hspace{2cm}}$.

a) $\cos 3t$

b) $\sin 3t$

c) $3t + \cos 3t$

d) $\cos 3t + \sin 3t$

Section – I

Q.2 Attempt any three of the following question.

09

- a) In an experiment with 500 seeds in group of 5 the following results were obtained

$x:$	0	1	2	3	4	5	Total
$f:$	10	70	150	160	80	30	500

Where f denote the number of groups in which x seeds germinated. Fit a binominal distributed to the data.

- b) Solve $(D^2 - 5D + 6)y = \sin 3x$
 c) Find $L\{te^{-3t} \sin t\}$
 d) Evaluate $\int_0^{\infty} \frac{\sin 2t}{t} dt$ by using Laplace transform.
 e) Find inverse Laplace transform of $\log\left(1 + \frac{a^2}{s^2}\right)$

Q.3 Attempt any three of the following question..

09

- a) If the probability that an individual suffers a bad reaction from a particular injection is 0.001, determine the probability that out of 2000 individuals
 1) exactly four
 2) more than two individuals will suffer from bad reaction
 b) Solve $(D^2 + 2D + 1)y = x \cos x$
 c) Find $L\left\{\frac{e^{-3t} \sin 5t}{t}\right\}$
 d) Find the Laplace transform of $(1 + 2t - 3t^2 + 4t^3).H(t - 2)$.
 e) Using convolution theorem find inverse Laplace transform of $\frac{1}{s.(s^2+4)}$

Q.4 Attempt any two of the following question.

- a) From the following data find line of regression of x on y & estimate x when $y = 105$

$x:$	44	58	49	46	58	56	48	46	48	47
$y:$	88	114	102	113	91	89	102	93	114	94

- b) An electrical circuit consists of an inductance L , a condenser of capacity C & an e.m.f. $E = E_0 \cos wt$ so that the charge Q satisfies the differential equation

$$\frac{d^2Q}{dt^2} + \frac{Q}{LC} = \frac{E_0}{L} \cos wt$$

If $w = \frac{1}{\sqrt{LC}}$ & initially $Q = Q_0$ at $t = 0$ & the current is $i = i_0$ at $t = 0$. show that the charge Q at time t is given by

$$Q = Q_0 \cos wt + \frac{i_0}{w} \sin wt + \frac{E_0}{2Lw} t \sin wt$$

- c) Solve by using Laplace transform

$$(D^2 + 25)y = 10 \cos 5t, y(0) = 2 \text{ \& } y'(0) = 0$$

Section-II**Q.5 Attempt any three of the following questions.**

09

- a) Solve the following set of equations by Gauss Elimination method.
 $3x + 4y + 5z = 18, 2x - y + 8z = 13, 5x - 2y + 7z = 20.$
- b) Solve the equation $x \tan x + 1 = 0$ by Regula Falsi method starting with $a = 2.5$ and $b = 3$ correct to three decimal places.
- c) Expand x^2 as a Fourier series in interval $(-1, 1)$
- d) Find z -transform of the sequence
 $f(k) = 3^k, \quad k < 0$
 $= 2^k, \quad k \geq 0$
- e) Find the Fourier Sine transform of $f(x) = 2e^{-5x} + 5e^{-2x}$ where $x \geq 0$

Q.6 Attempt any three of the following questions.

09

- a) Find a positive real root of $2x^3 - 3x - 6 = 0$ by Newton's Raphson method correct to five places of decimal.
- b) Obtain half range sine series of $f(x) = lx - x^2$ in the interval $(0, l)$.
- c) Find z -transform of the sequence $\{k^2 a^k\}$ where $k \geq 0$
- d) Express the function $f(x) = 1 \quad 0 \leq x < \pi$
 $= 0 \quad x > \pi$
 as a Fourier sine integral representation
- e) Solve the following system of equation by Gauss-Seidal method correct to three decimal places.
 $x + y + 54z = 110, \quad 27x + 6y - z = 85, \quad 6x + 15y + 2z = 72$

Q.7 Attempt any two of the following questions.

a) Find the Fourier series of the function

$$\begin{aligned} f(x) &= \pi x & 0 < x < 1 \\ &= 0 & 1 < x < 2 \end{aligned}$$

b) Find inverse z-transform of $\frac{2z^2-5z}{(z-2)(z-3)}$ where $|z| > 3$

c) Find the Fourier transform of the function

$$\begin{aligned} f(x) &= 1 - x^2 & |x| \leq 1 \\ &= 0 & |x| > 1 \end{aligned}$$

Hence evaluate

$$\int_0^{\infty} \left(\frac{\sin x - x \cos x}{x^3} \right) \cos\left(\frac{x}{2}\right) dx$$

- 1) Fourier series of $f(x) = 1 - x^2$ in $(-1, 1)$ contains _____.
 - a) only sine series
 - b) only cosine series
 - c) both sine and cosine series
 - d) none of these

- 2) In the interval $(0, 2)$ the constant term in the Fourier series of $f(x) = x$ is _____.
 - a) 1
 - b) 2
 - c) 3
 - d) 0

- 3) Fourier cosine transform of e^{-x} for $x \geq 0$ is _____.
 - a) $\frac{s}{1+s^2}$
 - b) $\sqrt{\frac{2}{\pi}} \frac{s}{s^2+1}$
 - c) $\sqrt{\frac{\pi}{2}} \frac{1}{1+s^2}$
 - d) $\sqrt{\frac{2}{\pi}} \frac{1}{1+s^2}$

- 4) If $z\{f(k)\} = F(z)$, then $Z\{k \cdot f(k)\} =$ _____.
 - a) $\frac{dF(z)}{dz}$
 - b) $z \frac{dF(z)}{dz}$
 - c) $-z \frac{dF(z)}{dz}$
 - d) $-\frac{dF(z)}{dz}$

- 5) For $|z| > 1$, the inverse z-Transform of $\frac{z}{z-1}$ is _____.
 - a) $1, k \geq 0$
 - b) $2^k, k \geq 0$
 - c) $2^k, k < 0$
 - d) not exists

- 6) The general solution of $(D^4 + 6D^2 + 9)y = 0$ is _____.
- a) $y = (c_1 + c_2x)e^x + (c_3 + c_4x)e^{-x}$
 b) $y = (c_1 + c_2x)\cos\sqrt{3}x + (c_3 + c_4x)\sin\sqrt{3}x$
 c) $y = (c_1 + c_2x)e^{-x} + (c_3 + c_4x)e^x$
 d) $y = (c_1 + c_2\cos x)e^x + (c_3 + c_4\sin x)e^x$
- 7) The particular integral of $(D^4 - n^4)y = \sin nx$ is
- a) $\frac{x}{4n^3}\sin nx$ b) $-\frac{x}{4n^3}\cos nx$
 c) $\frac{x}{4n^3}\cos nx$ d) $-\frac{x}{4n^3}\sin nx$
- 8) If $f(t) = f(t + T)$ where T is period of $f(t)$ then $L\{f(t)\} =$ _____.
- a) $\frac{1}{1 - e^{-Ts}} \int_0^T e^{-st} f(t) dt$ b) $\frac{1}{1 - e^{Ts}} \int_0^T e^{-st} f(t) dt$
 c) $\frac{1}{1 - e^{st}} \int_0^T e^{-sT} f(t) dt$ d) $\frac{1}{1 - e^{-st}} \int_0^T e^{sT} f(t) dt$
- 9) $L^{-1}\left\{\frac{s+3}{s^2+3^2}\right\} =$ _____.
- a) $\cos 3t$ b) $\sin 3t$
 c) $3t + \cos 3t$ d) $\cos 3t + \sin 3t$
- 10) If $L\{f_1(t)\} = \phi_1(s)$ & $L\{f_2(t)\} = \phi_2(s)$ then $L^{-1}\{\phi_1(s) \cdot \phi_2(s)\} =$ _____.
- a) $\int_0^t f_1(u)f_2(t-u)du$ b) $\int_0^\infty f_1(u)f_2(t-u)du$
 c) $\int_0^t f_1(u)f_2(u)du$ d) $\int_0^\infty f_1(u)f_2(u)du$
- 11) If $\bar{x} = 70, \bar{y} = 149, b_{yx} = 0.7$ then the equation of the line of regression of y on x is
- a) $y = 0.7x + 60$ b) $y = 0.7x + 80$
 c) $y = 0.7x + 100$ d) $y = 0.7x + 120$
- 12) If a random variable x has a Poisson distribution with mean 3, then $P(x = 4) =$ _____.
- a) 0.11 b) 0.13
 c) 0.15 d) 0.17

- 13) In solving algebraic and transcendental equation, which of the following method is called method of chord?
- | | |
|---------------------|---------------------|
| a) Newton's Raphson | b) Regula Falsi |
| c) Iteration method | d) Bisection method |
- 14) In solving simultaneous linear equation, which of the following method is direct method?
- | | |
|----------------------|-------------------|
| a) Gauss elimination | b) Gauss Jacobi's |
| c) Newton's Raphson | d) Gauss Seidal |

S.E. (Part – I) (New/Old) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ENGINEERING MATHEMATICS – III

Day & Date: Saturday, 07-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicate full marks.
 3) Assume suitable data if necessary.
 4) Use of non-programmable calculators is allowed.

Section – I

Q.2 Attempt any three of the following question. 09

- a) In an experiment with 500 seeds in group of 5 the following results were obtained

$x:$	0	1	2	3	4	5	Total
$f:$	10	70	150	160	80	30	500

Where f denote the number of groups in which x seeds germinated. Fit a binominal distributed to the data.

- b) Solve $(D^2 - 5D + 6)y = \sin 3x$
 c) Find $L\{te^{-3t} \sin t\}$
 d) Evaluate $\int_0^{\infty} \frac{\sin 2t}{t} dt$ by using Laplace transform.
 e) Find inverse Laplace transform of $\log\left(1 + \frac{a^2}{s^2}\right)$

Q.3 Attempt any three of the following question.. 09

- a) If the probability that an individual suffers a bad reaction from a particular injection is 0.001, determine the probability that out of 2000 individuals
 1) exactly four
 2) more than two individuals will suffer from bad reaction
 b) Solve $(D^2 + 2D + 1)y = x \cos x$
 c) Find $L\left\{\frac{e^{-3t} \sin 5t}{t}\right\}$
 d) Find the Laplace transform of $(1 + 2t - 3t^2 + 4t^3).H(t - 2)$.
 e) Using convolution theorem find inverse Laplace transform of $\frac{1}{s.(s^2+4)}$

Q.4 Attempt any two of the following question.

- a) From the following data find line of regression of x on y & estimate x when $y = 105$

$x:$	44	58	49	46	58	56	48	46	48	47
$y:$	88	114	102	113	91	89	102	93	114	94

- b) An electrical circuit consists of an inductance L , a condenser of capacity C & an e.m.f. $E = E_0 \cos wt$ so that the charge Q satisfies the differential equation

$$\frac{d^2Q}{dt^2} + \frac{Q}{LC} = \frac{E_0}{L} \cos wt$$

If $w = \frac{1}{\sqrt{LC}}$ & initially $Q = Q_0$ at $t = 0$ & the current is $i = i_0$ at $t = 0$. show that the charge Q at time t is given by

$$Q = Q_0 \cos wt + \frac{i_0}{w} \sin wt + \frac{E_0}{2Lw} t \sin wt$$

- c) Solve by using Laplace transform

$$(D^2 + 25)y = 10 \cos 5t, y(0) = 2 \text{ \& } y'(0) = 0$$

Section-II**Q.5 Attempt any three of the following questions.**

09

- a) Solve the following set of equations by Gauss Elimination method.
 $3x + 4y + 5z = 18, 2x - y + 8z = 13, 5x - 2y + 7z = 20.$
- b) Solve the equation $x \tan x + 1 = 0$ by Regula Falsi method starting with $a = 2.5$ and $b = 3$ correct to three decimal places.
- c) Expand x^2 as a Fourier series in interval $(-1, 1)$
- d) Find z -transform of the sequence
 $f(k) = 3^k, \quad k < 0$
 $= 2^k, \quad k \geq 0$
- e) Find the Fourier Sine transform of $f(x) = 2e^{-5x} + 5e^{-2x}$ where $x \geq 0$

Q.6 Attempt any three of the following questions.

09

- a) Find a positive real root of $2x^3 - 3x - 6 = 0$ by Newton's Raphson method correct to five places of decimal.
- b) Obtain half range sine series of $f(x) = lx - x^2$ in the interval $(0, l)$.
- c) Find z -transform of the sequence $\{k^2 a^k\}$ where $k \geq 0$
- d) Express the function $f(x) = 1 \quad 0 \leq x < \pi$
 $= 0 \quad x > \pi$
 as a Fourier sine integral representation
- e) Solve the following system of equation by Gauss-Seidal method correct to three decimal places.
 $x + y + 54z = 110, \quad 27x + 6y - z = 85, \quad 6x + 15y + 2z = 72$

Q.7 Attempt any two of the following questions.

a) Find the Fourier series of the function

$$\begin{aligned} f(x) &= \pi x & 0 < x < 1 \\ &= 0 & 1 < x < 2 \end{aligned}$$

b) Find inverse z-transform of $\frac{2z^2-5z}{(z-2)(z-3)}$ where $|z| > 3$

c) Find the Fourier transform of the function

$$\begin{aligned} f(x) &= 1 - x^2 & |x| \leq 1 \\ &= 0 & |x| > 1 \end{aligned}$$

Hence evaluate

$$\int_0^{\infty} \left(\frac{\sin x - x \cos x}{x^3} \right) \cos\left(\frac{x}{2}\right) dx$$

S.E. (Part – I) (New/Old) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ELECTRONICS CIRCUIT ANALYSIS AND DESIGN – I

Day & Date: Tuesday, 10-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.
 2) Figures to the right indicate full marks.
 3) Assume suitable data if necessary.
 4) Use of electronic component datasheet is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) The ripple factor is independent of resistance in _____ filter.
 - a) L
 - b) LC
 - c) C
 - d) CLC
- 2) Load regulation of ideal power supply must be _____.
 - a) Zero
 - b) Infinite
 - c) Large
 - d) None of these
- 3) PIV of rectifier diode depends upon _____.
 - a) Maximum reverse voltage across it
 - b) Maximum forward voltage across it
 - c) Type of semiconductor material used
 - d) None of these
- 4) Load regulation can be improved in LC filter by _____.
 - a) Inductor filter
 - b) Using capacitor filter
 - c) Using bleeder resistor
 - d) Using bleeder capacitor
- 5) If one of the diode in centre tapped full wave rectifier circuit get damaged it act like _____.
 - a) Clamper circuit
 - b) Half wave rectifier
 - c) Both a & b
 - d) Cant say
- 6) Reverse saturation current gets _____ for every _____ rise in temperature.
 - a) Half, 10°C
 - b) Triple, 30°C
 - c) Double, 10°C
 - d) Constant, 10°C
- 7) The critical value of inductance in choke input filter is _____.
 - a) $3\omega/R_L$
 - b) $R_L/3\omega$
 - c) $3\omega R_L$
 - d) R_L
- 8) Which are the majority charge carriers in P-channel JFET by enhancing the flow of current between two N-regions or gates?
 - a) Holes
 - b) Electrons
 - c) Both a & b
 - d) None of the above

- 9) Which internally connected region is heavily doped with an impurity by forming double PN junctions in JFET?
 a) Source
 b) Drain
 c) Gate
 d) Channel
- 10) The output voltage of common base amplifier is _____ with input signal.
 a) in phase
 b) 270°
 c) 90° out of phase
 d) 180°
- 11) The total emitter current (I_E) is given by _____.
 a) $I_E = I_{pE} * I_{nE}$
 b) $I_E = I_{pE} - I_{nE}$
 c) $I_E = I_{pE} / I_{nE}$
 d) $I_E = I_{pE} + I_{nE}$
- 12) The correct relation between the transistor parameters α and β are related by _____.
 a) $\beta = 1 - \alpha/\alpha$
 b) $\beta = 1 + \alpha/\alpha$
 c) $\alpha = \beta + 1/\beta$
 d) $\alpha = \beta/\beta + 1$
- 13) The Early Effect is also called as _____.
 a) Base-width modulation effect
 b) Base-width amplification effect
 c) Punch through effect
 d) None of the mentioned
- 14) Which of the following acts as a buffer?
 a) CC amplifier
 b) CE amplifier
 c) CB amplifier
 d) Cascaded amplifier

S.E. (Part – I) (New/Old) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ELECTRONICS CIRCUIT ANALYSIS AND DESIGN – I

Day & Date: Tuesday, 10-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicate full marks.
 3) Assume suitable data if necessary.
 4) Use of electronic component datasheet is allowed.

Section – I**Q.2 Solve any four****16**

- What is PIV rating of diode? What is value of PIV for centre tapped full wave rectifier explain with neat circuit diagram.
- Calculate value of reverse saturation current for Silicon diode at room temperature when applied voltage is 5V and forward current through diode is 1A.
- Explain with neat circuit diagram working of voltage Tripler.
- Draw output waveform and transfer characteristics for following circuit.

- Derive expression for efficiency and ripple factor for half wave rectifier.

Q.3 Solve any two.**12**

- Design unregulated power supply with two diode and CLC filter to provide 20V and 10mA current, ripple content in the output must be less than 1%.
- Explain depletion and diffusion capacitance of diode and derive expression of diffusion capacitance.
- What is clamper? Explain working of positive clamper with neat circuit diagram and waveform. Explain working of voltage doubler.

Section – II**Q.4 Solve any four questions.****16**

- Design Collector to base biasing circuit for
 $V_{CEQ} = 5V, I_{CQ} = 5mA, V_{CC} = 12V, \beta_{dc} = 120$.
- Justify output voltage signal is 180° out of phase with input signal with suitable diagram for transistor Common Emitter amplifier.
- Explain DC load line concept in BJT CE amplifier.
- Explain effect of Gate to source voltage on channel conductivity for JFET.
- Explain high frequency response of BJT amplifier.

Q.5 Solve any Two questions.

- a)** Consider transistor CE amplifier with $R_L = 2.7K\Omega$, $h_{ie} = 4.5K\Omega$, $h_{re} = 2 \times 10^{-4}$, $h_{fe} = 330$, $h_{oe} = 30\mu\text{S}$. Calculate A_i , A_v , R_i , R_o , A_p .
- b)** Design a single stage CE amplifier with voltage divider bias to give voltage gain of 40, $V_{o\text{peak}} = 4V$ and stability factor $S=10$. Assume $h_{fe} = 45$, $h_{ie} = 1.4K\Omega$.
- c)** Explain Common Source JFET amplifier with its basic parameters.

 - d) None of these
- 8) PIV of rectifier diode depends upon _____.
 - a) Maximum reverse voltage across it
 - b) Maximum forward voltage across it
 - c) Type of semiconductor material used
 - d) None of these
- 9) Load regulation can be improved in LC filter by _____.
 - a) Inductor filter
 - b) Using capacitor filter
 - c) Using bleeder resistor
 - d) Using bleeder capacitor

- 10) If one of the diode in centre tapped full wave rectifier circuit get damaged it act like _____.
- | | |
|--------------------|------------------------|
| a) Clamper circuit | b) Half wave rectifier |
| c) Both a & b | d) Cant say |
- 11) Reverse saturation current gets _____ for every _____ rise in temperature.
- | | |
|-----------------|-------------------|
| a) Half, 10°C | b) Triple, 30°C |
| c) Double, 10°C | d) Constant, 10°C |
- 12) The critical value of inductance in choke input filter is _____.
- | | |
|------------------|------------------|
| a) $3\omega/R_L$ | b) $R_L/3\omega$ |
| c) $3\omega R_L$ | d) R_L |
- 13) Which are the majority charge carriers in P-channel JFET by enhancing the flow of current between two N-regions or gates?
- | | |
|---------------|----------------------|
| a) Holes | b) Electrons |
| c) Both a & b | d) None of the above |
- 14) Which internally connected region is heavily doped with an impurity by forming double PN junctions in JFET?
- | | |
|-----------|------------|
| a) Source | b) Drain |
| c) Gate | d) Channel |

S.E. (Part – I) (New/Old) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ELECTRONICS CIRCUIT ANALYSIS AND DESIGN – I

Day & Date: Tuesday, 10-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicate full marks.
 3) Assume suitable data if necessary.
 4) Use of electronic component datasheet is allowed.

Section – I**Q.2 Solve any four****16**

- What is PIV rating of diode? What is value of PIV for centre tapped full wave rectifier explain with neat circuit diagram.
- Calculate value of reverse saturation current for Silicon diode at room temperature when applied voltage is 5V and forward current through diode is 1A.
- Explain with neat circuit diagram working of voltage Tripler.
- Draw output waveform and transfer characteristics for following circuit.

- Derive expression for efficiency and ripple factor for half wave rectifier.

Q.3 Solve any two.**12**

- Design unregulated power supply with two diode and CLC filter to provide 20V and 10mA current, ripple content in the output must be less than 1%.
- Explain depletion and diffusion capacitance of diode and derive expression of diffusion capacitance.
- What is clamper? Explain working of positive clamper with neat circuit diagram and waveform. Explain working of voltage doubler.

Section – II**Q.4 Solve any four questions.****16**

- Design Collector to base biasing circuit for
 $V_{CEQ} = 5V, I_{CQ} = 5mA, V_{CC} = 12V, \beta_{dc} = 120$.
- Justify output voltage signal is 180° out of phase with input signal with suitable diagram for transistor Common Emitter amplifier.
- Explain DC load line concept in BJT CE amplifier.
- Explain effect of Gate to source voltage on channel conductivity for JFET.
- Explain high frequency response of BJT amplifier.

Q.5 Solve any Two questions.

- a) Consider transistor CE amplifier with $R_L = 2.7K\Omega$, $h_{ie} = 4.5K\Omega$, $h_{re} = 2 \times 10^{-4}$, $h_{fe} = 330$, $h_{oe} = 30\mu\text{S}$. Calculate A_i , A_v , R_i , R_o , A_p .
- b) Design a single stage CE amplifier with voltage divider bias to give voltage gain of 40, $V_{o\text{peak}} = 4V$ and stability factor $S=10$. Assume $h_{fe} = 45$, $h_{ie} = 1.4K\Omega$.
- c) Explain Common Source JFET amplifier with its basic parameters.

S.E. (Part – I) (New/Old) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
NETWORK THEORY & ANALYSIS

Day & Date: Thursday, 12-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer Book.
 2) Figures to the right indicate full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) Quality factor Q of coil is defined as _____.
 a) $Q = WL/2R$
 b) $Q = 2\pi$ *Max energy stored/energy dissipated per cycle
 c) $Q = 1/2WCR$
 d) None
- 2) A practical current source consists of _____.
 a) An ideal current source in series with a resistance
 b) An ideal current source in parallel with a resistance
 c) An ideal current source in parallel with voltage source
 d) None of the above
- 3) In parallel resonance, resonance occurs when susceptance part of admittance is _____.
 a) Infinite
 b) $X_L > X_C$
 c) $X_C > X_L$
 d) Zero
- 4) In series RLC circuit operating frequency below for _____.
 a) I leads Vs
 b) I lags behind Vs
 c) I & Vs in phase
 d) None
- 5) In Series RLC circuit, at resonance the voltage across capacitor and voltage across inductance are in _____.
 a) $V_L > V_C$
 b) $V_C > V_L$
 c) $V_L = V_C$
 d) $V_L + V_C$
- 6) What is the driving point impedance at port one with port two open circuited for the network shown below ($Z_a = 1\Omega$, $Z_b = 3\Omega$, & $Z_c = 2\Omega$)?

- a) 4 Ω
- b) 3 Ω
- c) 5 Ω
- d) 2 Ω

- 7) When two port networks are connected in parallel the resultant _____.
- Z parameters are the sum of individual parameters
 - Y parameters are the sum of individual parameters
 - both a & b
 - None
- 8) If the number of zeros (n) are greater than the number of poles (m), then there will be _____ number of zeros at $s = \infty$.
- n
 - M
 - n-m
 - n+m
- 9) If V_1 is the voltage at port 1 and V_2 is the voltage at port 2, then the attenuation in dB is?
- $20 \log_{10} (V_1/V_2)$
 - $10 \log_{10} (V_1/V_2)$
 - $20 \log_{10} (V_2/V_1)$
 - $10 \log_{10} (V_2/V_1)$
- 10) In band elimination filter, the frequency of resonance of individual arms is geometric _____.
- Mean of two cut-off frequencies
 - Difference of two cut-off frequencies
 - Product of two cut-off frequencies
 - Division of two cut-off frequencies
- 11) Transient behavior occurs in any circuit when _____.
- There are sudden changes of applied voltage
 - The voltage source is shorted
 - The circuit is connected or disconnected from the supply
 - All of these
- 12) A series R-L circuit with $R = 30\Omega$ and $L = 15H$ has a constant voltage $V = 60V$ applied at $t = 0$. Determine the current (A) in the circuit at $t = 0+$.
- 1
 - 2
 - 3
 - 0
- 13) The ratio of the current transform at one port to current transform at other port is called?
- Transfer admittance
 - Transfer impedance
 - Current transfer ratio
 - Voltage transfer ratio
- 14) Consider the RL circuit shown in the figure below. The input voltage $V_s(t)$ is also shown in the figure. Let $t_1 = 0.1$ msec. What is $i(0-)$?

- 0mA
- 1mA
- 0.56mA
- 0.75mA

Electronics & Telecommunication Engineering
NETWORK THEORY & ANALYSIS**

Day & Date: Thursday, 12-12-2019
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

Instructions: 1) All questions are compulsory.
2) Figures to the right indicate full marks.

Section – I

Q.2 Attempt any four.

16

- a) For the circuit shown below determine the current in $(2+j3) \Omega$ by using superposition theorem.

- b) Derive expression for resonant frequency in series RLC circuit. How the value of R will affect on frequency response.
- c) Define bandwidth. Derive expression for upper cut off and lower cut off frequencies for series resonant circuit.
- d) The parameters of two port n/w are $Z_{11} = 10\Omega$, $Z_{22} = 15\Omega$, $Z_{12} = Z_{21} = 5\Omega$. Find the equivalent T n/w.
- e) Find h parameters for the circuit shown below.

Q.3 Attempt any two.

a) State and verify maximum transfer theorem. A DC voltage source has open circuit voltage of 20V and internal resistance for of 2 Ω. Determine the value of the load resistance that gives maximum power dissipation.

b) Show that $\omega_r = \frac{1}{\sqrt{LC}} \sqrt{\frac{R_L^2 - (\frac{L}{C})}{R_C^2 - (\frac{L}{C})}}$

For circuit shown below, find the value of L at which the circuit resonates at a frequency of 1000 rda/sec.

c) Explain reciprocity and symmetry for -
 1) Z parameters
 2) Y parameters

Section – II

Q.4 Attempt any four

a) Design a π type attenuator to give 20dB attenuation and to have characteristic impedance of 100Ω.
 b) Find $Z_{11}(S)=V_1(S)/I_1(S)$ and $G_{21}(S)=V_2(S)/V_1(S)$ for the Network shown below.

- c) In the circuit shown below, the initial charge on the capacitor is 2.5 mC, with the voltage polarity as indicated. The switch is closed at time $t=0$. calculate the current $i(t)$ at a time t after the switch is closed.

- d) What is filter? What are applications of filter? Explain types of filters with its ideal attenuation characteristics.
 e) Give the definition of poles and zero of the network and significance of pole and zero of the network function.

Q.5 Attempt any two.

12

- a) Explain the classification of filter in brief. Design T section of m-derived LPF having cut off frequency of 1 Kz, Design impedance of 400Ω and the resonant frequency of 1100Hz.
 b) Show the Pole zero Plot of the given network function $V(S)$ and hence obtain $V(t)$.

$$I(S) = \frac{3S}{(S + 2)(S^2 + 2S + 2)}$$

- c) Discuss step voltage and Step current response of R-L Circuit.

Q.3 Attempt any two.

a) State and verify maximum transfer theorem. A DC voltage source has open circuit voltage of 20V and internal resistance for of 2 Ω. Determine the value of the load resistance that gives maximum power dissipation.

b) Show that $\omega_r = \frac{1}{\sqrt{LC}} \sqrt{\frac{R_L^2 - (\frac{L}{C})}{R_C^2 - (\frac{L}{C})}}$

For circuit shown below, find the value of L at which the circuit resonates at a frequency of 1000 rda/sec.

c) Explain reciprocity and symmetry for -
 1) Z parameters
 2) Y parameters

Section – II

Q.4 Attempt any four

a) Design a π type attenuator to give 20dB attenuation and to have characteristic impedance of 100Ω.
 b) Find $Z_{11}(S)=V_1(S)/I_1(S)$ and $G_{21}(S)=V_2(S)/V_1(S)$ for the Network shown below.

- c) In the circuit shown below, the initial charge on the capacitor is 2.5 mC, with the voltage polarity as indicated. The switch is closed at time $t=0$. calculate the current $i(t)$ at a time t after the switch is closed.

- d) What is filter? What are applications of filter? Explain types of filters with its ideal attenuation characteristics.
 e) Give the definition of poles and zero of the network and significance of pole and zero of the network function.

Q.5 Attempt any two.

12

- a) Explain the classification of filter in brief. Design T section of m-derived LPF having cut off frequency of 1 Kz, Design impedance of 400Ω and the resonant frequency of 1100Hz.
 b) Show the Pole zero Plot of the given network function $V(S)$ and hence obtain $V(t)$.

$$I(S) = \frac{3S}{(S + 2)(S^2 + 2S + 2)}$$

- c) Discuss step voltage and Step current response of R-L Circuit.

S.E. (Part – I) (New/Old) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
DIGITAL TECHNIQUES

Day & Date: Saturday, 14-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer Book.
 2) Figures to the right indicate full marks.
 3) Draw neat diagrams.
 4) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) In a four variable K-map eight adjacent cells give _____.
 a) Single variable term b) Two variable term
 c) Three variable term d) Four variable term

- 2) In a 4 bit full adder how many half adders and OR gates are required?
 a) 8 and 4 b) 7 and 4
 c) 7 and 3 d) 8 and 3

- 3) Consider the following statements for a multiplexer _____.
 i) selects one of the several inputs and steers it to the output
 ii) routes the data from a single input to many outputs
 iii) converts parallel data into serial data
 iv) is a combinational circuit
 Which of the above is correct for a Multiplexer?
 a) i, ii, iii b) i, iii, iv
 c) i, ii, iv d) ii, iii, iv

- 4) Consider the following statements.
 i) ECL has least propagation delay
 ii) TTL has largest fan out
 iii) CMOS has highest noise margin
 iv) TTL has lowest power dissipation
 Which of the following are correct for above statements?
 a) i & iii b) ii & iv
 c) iii & iv d) i & ii

- 5) A JK flip flop can be converted to D flip flop by, _____.
 a) Connecting both J and K terminals to D
 b) Connecting J terminal to D and leaving K open
 c) Connecting K terminal to D and leaving J open
 d) Connecting J terminal to D and K terminal to D through an inverter

- 6) How many NAND gates are used to construct Active High S-R flip flop?
 a) 5 b) 3
 c) 4 d) 8

S.E. (Part – I) (New/Old) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
DIGITAL TECHNIQUES

Day & Date: Saturday, 14-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicate full marks.
 3) Draw neat diagrams.
 4) Assume suitable data if necessary.

Section – I

Q.2 Answer any four. 16

- a) Implement the following Boolean function F, using NOR logic

$$F(A, B, C, D) = \sum(0, 4, 8, 9, 10, 11, 12, 14)$$
- b) Explain and design a 2-bit magnitude comparator which should compare x & y and give output as x>y, x=y and x<y.
- c) Design an Odd Parity Generator for 3 bit binary input.
- d) Design and explain 2 input NAND gate using CMOS.
- e) Explain 1-bit latch using NAND logic.

Q.3 Solve any two. 12

- a) Simplify the following functions, and implement using NAND gate

$$F(A, B, C, D) = AC'D' + A'C + ABC + AB'C + A'C'D'$$
- b) Explain General model for flip-flop conversion and convert D-flip flop to T flip-flop.
- c) Define and explain following characteristics of a logic family
 - 1) Fan-out
 - 2) Propagation Delay
 - 3) Power Dissipation
 - 4) Figure of Merit (Speed Power Product)

Section – II

Q.4 Attempt any four. 16

- a) Explain in detail SIPO Shift register with example & waveform.
- b) Design 2 bit synchronous down counter using T Flip flop.
- c) Write VHDL code for Comparator.
- d) Explain Mealy machine with block diagram & example.
- e) Design a PROM PLD based 3 bit binary to gray converter.

Q.5 Attempt any two. 12

- a) Explain in detail ring counter & twisted ring counter with waveform.
- b) Write a short note on IC 7490. Design MOD 7 counter using IC 7490.
- c) Explain sequence detector with example.

- 2) How many NAND gates are used to construct Active High S-R flip flop?
 - a) 5
 - b) 3
 - c) 4
 - d) 8
- 3) In comparison with Serial adder the Parallel adder _____.
 - a) is slower
 - b) has same speed
 - c) is faster
 - d) has delayed output
- 4) Maximum MOD number for a 2-bit binary counter is _____.
 - a) 4
 - b) 3
 - c) 8
 - d) 16
- 5) To serially shift a 5-bit of data into a shift register, there must be _____.
 - a) 1 clock pulse
 - b) 4 clock pulses
 - c) 5 clock pulses
 - d) 1 clock pulse for each 1
- 6) To operate correctly, starting a ring counter requires _____.
 - a) presetting all the flip-flops
 - b) clearing all the flip-flops
 - c) presetting one flip-flop and clearing all the others
 - d) none of the above
- 7) How many minimum number of flip-flops are required to make a MOD-28 binary counter?
 - a) 32
 - b) 16
 - c) 5
 - d) 4
- 8) When two counters are cascaded, the overall MOD number is equal to the _____ of their individual MOD numbers.
 - a) Product
 - b) Sum
 - c) Log
 - d) Reciprocal

- 9) Clock signals are used in sequential logic circuits _____.
a) To tell current time
b) To tell how propagation delay
c) To carry serial data signals
d) To synchronize events in various parts of the system
- 10) How many flip-flops are in the IC7495?
a) 1
b) 2
c) 3
d) 4
- 11) In a four variable K-map eight adjacent cells give _____.
a) Single variable term
b) Two variable term
c) Three variable term
d) Four variable term
- 12) In a 4 bit full adder how many half adders and OR gates are required?
a) 8 and 4
b) 7 and 4
c) 7 and 3

 2) All questions are compulsory.
 3) Figures to the right indicate full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q1 Choose the correct option alternatives from the options.

14

- 1) Modulation is done in _____.
 a) Transmitter
 b) Radio receiver
 c) Between transmitter and radio receiver
 d) None of the above
- 2) Superhertodyne principle refers to _____.
 a) Using a large number of amplifier stages
 b) Using a push-pull circuit
 c) Obtaining lower fixed intermediate frequency
 d) None of the above
- 3) The IF is 455 kHz. If the radio receiver is tuned to 855 kHz, the local oscillator frequency is _____.
 a) 455KHz
 b) 1310KHz
 c) 1500KHz
 d) 1520KHz
- 4) In an AM wave, the majority of the power is in _____.
 a) Lower Sideband
 b) Upper sideband
 c) Carrier
 d) None of above
- 5) Low frequency noise is _____.
 a) Shot Nosie
 b) Thermal Nosie
 c) Flicker Nosie
 d) None of above
- 6) Nosie figure of an amplifier is always _____.
 a) Less than one
 b) Greater than one
 c) Equal to one
 d) Equal to 100
- 7) An AM broadcast transmitter has a carrier power of 50KW. with 80% modulation, total power that would be produced will be _____.
 a) 40 KW
 b) 50 KW
 c) 66 KW
 d) 100 KW
- 8) The amount of frequency deviation in FM signal depends on _____.
 a) Amplitude of the modulating signal
 b) Carrier frequency
 c) Modulating frequency
 d) Transmitter amplifier

- 9) Pre emphasis is done _____.
- a) For boosting of modulating signal voltage
 - b) For modulating signals at higher frequencies
 - c) In FM before modulation
 - d) All of the above
- 10) Which mode of propagation is adopted in HF antennas?
- a) Ionosphere
 - b) Ground wave
 - c) Tropospheric
 - d) All of the above
- 11) The Nquist sample rate for a maximum analog information frequency of 4 Khz is _____.
- a) 2KHz
 - b) 4KHz
 - c) 8KHz
 - d) 16KHz
- 12) Radiation pattern of half wave dipole antenna is _____.
- a) Omni-directional
 - b) Uni-directional
 - c) Pattern of Eight
 - d) None
- 13) What is the maximum modulating frequency allowed in FM broadcastings?
- a) 40 KHz
 - b) 75 KHz
 - c) 15 KHz
 - d) 120 KHz
- 14) Indirect Method of FM generation is _____.
- a) Reactance modulator
 - b) Varactor diode modulator
 - c) Transistorized modulator
 - d) Armstrong modulator

Electronics & Telecommunication Engineering
ANALOG COMMUNICATION

Day & Date: Tuesday, 17-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figure to the right indicates full marks.

Section – I

Q.2 Solve any four of the following. **16**

- a) Explain the characteristics of AM receiver.
- b) Draw the schematic diagram of VSB modulator and explain.
- c) Explain different transmission media used in the communication system.
- d) Write a note on filter method of SSB generation.
- e) The antenna current of an AM transmitter is 8 A , if only the carrier is sent, but it increases to 8.93 A, if the carrier is modulated by a single sinusoidal wave. Determine the percentage modulation. Also find the antenna current if the percent of modulation changes to 0.8.

Q.3 Solve any two of the following. **12**

- a) Derive the expression for the total power in the modulated wave and show that 33.33% of the total power is used for information transmission.
- b) Derive an expression for Noise equivalent resistance due to cascading of many amplifier.
- c) Draw and explain super heterodyne receiver. What are its advantages and disadvantages over TRF receiver?

Section – II

Q.4 Solve any four of the following. **16**

- a) Compare sky-wave and space-wave propagation.
- b) What is pre-emphasis? Why is it used? Sketch a typical pre-emphasis circuit and explain why de-emphasis must be used also.
- c) Define Nyquist rate and Nyquist interval.
- d) Explain pulse amplitude modulation method.
- e) What is ground wave propagation? What are its limitation?

Q.5 Solve any two of the following. **12**

- a) With block diagram, explain the working of the Armstrong method of FM generation.
- b) Write a short note on.
 - 1) Half dipole antenna
 - 2) Yagi uda antenna
- c) Draw a neat diagram of foster seeley discriminator and explain the working in brief with the help of voltage phasor diagram.

S.E. (Part – I) (New/Old) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ANALOG COMMUNICATION

Day & Date: Tuesday, 17-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figure to the right indicates full marks.

Section – I

- Q.2 Solve any four of the following.** **16**
- a) Explain the characteristics of AM receiver.
 - b) Draw the schematic diagram of VSB modulator and explain.
 - c) Explain different transmission media used in the communication system.
 - d) Write a note on filter method of SSB generation.
 - e) The antenna current of an AM transmitter is 8 A , if only the carrier is sent, but it increases to 8.93 A, if the carrier is modulated by a single sinusoidal wave. Determine the percentage modulation. Also find the antenna current if the percent of modulation changes to 0.8.
- Q.3 Solve any two of the following.** **12**
- a) Derive the expression for the total power in the modulated wave and show that 33.33% of the total power is used for information transmission.
 - b) Derive an expression for Noise equivalent resistance due to cascading of many amplifier.
 - c) Draw and explain super heterodyne receiver. What are its advantages and disadvantages over TRF receiver?

Section – II

- Q.4 Solve any four of the following.** **16**
- a) Compare sky-wave and space-wave propagation.
 - b) What is pre-emphasis? Why is it used? Sketch a typical pre-emphasis circuit and explain why de-emphasis must be used also.
 - c) Define Nyquist rate and Nyquist interval.
 - d) Explain pulse amplitude modulation method.
 - e) What is ground wave propagation? What are its limitation?
- Q.5 Solve any two of the following.** **12**
- a) With block diagram, explain the working of the Armstrong method of FM generation.
 - b) Write a short note on.
 - 1) Half dipole antenna
 - 2) Yagi uda antenna
 - c) Draw a neat diagram of foster seeley discriminator and explain the working in brief with the help of voltage phasor diagram.

S.E. (Part – I) (New/Old) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ANALOG COMMUNICATION

Day & Date: Tuesday, 17-12-2019
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No.1 is compulsory and should be solved in first 30 minute in answer book.
 2) All questions are compulsory.
 3) Figures to the right indicate full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q1 Choose the correct option alternatives from the options.

14

- 1) Low frequency noise is _____.
 - a) Shot Noise
 - b) Thermal Noise
 - c) Flicker Noise
 - d) None of above
- 2) Noise figure of an amplifier is always _____.
 - a) Less than one
 - b) Greater than one
 - c) Equal to one
 - d) Equal to 100
- 3) An AM broadcast transmitter has a carrier power of 50KW. with 80% modulation, total power that would be produced will be _____.
 - a) 40 KW
 - b) 50 KW
 - c) 66 KW
 - d) 100 KW
- 4) The amount of frequency deviation in FM signal depends on _____.
 - a) Amplitude of the modulating signal
 - b) Carrier frequency
 - c) Modulating frequency
 - d) Transmitter amplifier
- 5) Pre emphasis is done _____.
 - a) For boosting of modulating signal voltage
 - b) For modulating signals at higher frequencies
 - c) In FM before modulation
 - d) All of the above
- 6) Which mode of propagation is adopted in HF antennas?
 - a) Ionosphere
 - b) Ground wave
 - c) Tropospheric
 - d) All of the above
- 7) The Nyquist sample rate for a maximum analog information frequency of 4 Khz is _____.
 - a) 2KHz
 - b) 4KHz
 - c) 8KHz
 - d) 16KHz
- 8) Radiation pattern of half wave dipole antenna is _____.
 - a) Omni-directional
 - b) Uni-directional
 - c) Pattern of Eight
 - d) None
- 9) What is the maximum modulating frequency allowed in FM broadcastings?
 - a) 40 KHz
 - b) 75 KHz
 - c) 15 KHz
 - d) 120 KHz

- 10) Indirect Method of FM generation is _____.
- a) Reactance modulator
 - b) Varactor diode modulator
 - c) Transistorized modulator
 - d) Armstrong modulator
- 11) Modulation is done in_____.
- a) Transmitter
 - b) Radio receiver
 - c) Between transmitter and radio receiver
 - d) None of the above
- 12) Superhertodyne principle refers to _____.
- a) Using a large number of amplifier stages
 - b) Using a push-pull circuit
 - c) Obtaining lower fixed intermediate frequency
 - d) None of the above
- 13) The IF is 455 kHz. If the radio receiver is tuned to 855 kHz, the local oscillator frequency is _____.
- a) 455KHz
 - b) 1310KHz
 - c) 1500KHz
 - d) 1520KHz
- 14) In an AM wave, the majority of the power is in _____.
- a) Lower Sideband
 - b) Upper sideband
 - c) Carrier
 - d) None of above

Electronics & Telecommunication Engineering
ELECTRONICS CIRCUIT ANALYSIS AND DESIGN – II**

Day & Date: Friday, 22-11-2019
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.
2) Assume suitable data if necessary
3) Figures to the right indicate full marks
4) Use of datasheet and non programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct Answer

14

- 1) Output resistance of current series negative feedback amplifier _____.
a) Increases b) Decreases
c) Does not change d) Becomes Unpredictable

- 2) When multistage amplifier is used to amplify DC signal then the coupling used is _____.
a) Direct b) Transformer
c) R-C d) R-L

- 3) If the transistor is operated in such a way that output current flows for 60° of the input signal then its _____ operation.
a) Class A b) Class B
c) Class C d) Class D

- 4) For Wein bridge oscillator a variable capacitor with 47pF and upper limit 470 pF is used, what should be the value of fixed resistance required to provide upper frequency limit of 200KHz.
a) 16.92 ohm b) 20.92 ohm
c) 30.92 ohm d) None of the these

- 5) When no signal is applied the approximate collector efficiency of Class A power amplifier is _____.
a) 10% b) 0%
c) 25% d) 50%

- 6) The frequency response of transformer coupled amplifier is _____.
a) Good b) Very Good
c) Excellent d) Poor

- 7) Cascading two amplifier stages will result in _____.
a) reduction in gain and increase in bandwidth
b) reduction in gain and reduction in bandwidth
c) increase in gain and reduction in bandwidth
d) increase in gain and increase in bandwidth

- 8) A pre-regulator is used with a transistor series regulator in order to _____.
- a) Increase the input resistance of series transistor
 - b) Decrease the input resistance of series transistor
 - c) Increase the output resistance of series transistor
 - d) Increase the current gain of series transistor
- 9) Schmitt trigger is _____.
- a) Oscillator
 - b) Amplifier
 - c) Comparator
 - d) All of these
- 10) Sine wave can be converted by _____.
- a) Rectifier
 - b) Schmitt trigger
 - c) Astable multivibrator
 - d) All of these
- 11) In monostable multivibrator quasi stable state duration is _____.
- a) RC
 - b) 0.7 RC
 - c) 1.4 RC
 - d) None of these
- 12) For selecting transistor in multi vibrator design, transistor used should have _____.
- a) less t_d
 - b) more t_f
 - c) less t_d and t_r
 - d) less t_d , t_r , t_f , t_s
- 13) For IC regulators output capacitor is required for _____.
- a) Improving stability
 - b) Short circuit protection
 - c) Improve transient response
 - d) Over voltage protection
- 14) In IC 555 discharge pin is _____.
- a) Pin No 2
 - b) Pin No 7
 - c) Pin No 4
 - d) Pin No 6

2) Assume suitable data if necessary
3) Figures to the right indicate full marks
4) Use of datasheet and non programmable calculator is allowed.

Section – I

Q.2 Attempt Any Four

16

- How overall low frequency response of n identical cascaded amplifier stage can be calculated? What will be overall lower 3dB frequency if three identical amplifier stages having lower cutoff frequency of 64Hz are cascaded?
- Discuss R-C coupled Multistage amplifier with its advantages and disadvantage. Draw its frequency response.
- What is Piezo electric effect? Explain the crystal oscillator circuit with its advantages.
- How power amplifiers are classified based on location of Q point on load line?
- Three amplifier stages are working in cascade with 0.05V peak to peak input providing 150Vpp output. If voltage gain of first stage is 20 and input to the third stage is 15Vpp Determine.
 - Overall voltage gain
 - Voltage gain of second and third stage
 - Input voltage of second stage
- A sinusoidal signal $V_s = 1.95 \sin 400t$ is applied to the power amplifier. The resulting current is
 $I_o = 12 \sin 400t + 1.2 \sin 800t + 0.9 \sin 1200t + 0.4 \sin 1600t$
 Calculate the total harmonic distortion and the percentage increase in power because of distortion.

Q.3 Attempt Any Two

12

- Design a wein bridge oscillator to provide peak to peak output voltage of 5V at the frequency of 5V at the frequency of 15KHz. Use $V_{CC} = 12V$.
- Design a class A transformer coupled amplifier to deliver 45mW to the load resistance of 40hm. Use supply voltage of 9Volts.
- What is the advantage of negative feedback in amplifiers? Discuss the effect of negative feedback on stability, Band width, noise, distortion, i/p resistance and o/p resistance for different types of negative feedback.

Section – II

Q.4 Attempt Any Four

16

- Derive a frequency of oscillation for Astable multivibrator using IC 555.
- Design an adjustable voltage regulator using LM-317 to satisfy following conditions- $V_o = 5V$ to 12V at output current of 1 A.
- Explain different triggering methods in transistorized multivibrator circuits.

- d) Design a constant current source using IC 7805 to source a current variation from 100mA to 200mA to the load variation of 10Ω to 30Ω .
- e) Explain Thermal Shutdown concept in IC Regulator.

Q.5 Attempt Any Two**12**

- a) Design a Transistorized series voltage regulator for given requirement
 $V_o = 25V$, at 50mA, $V_{in} = 30V$
Assume for Q1, $h_{fe1} = 100$, $h_{ie1} = 12K\Omega$, $V_{BE1} = 0.6V$
For Q2, $h_{fe2} = 150$, $h_{ie2} = 3K\Omega$, $V_{BE2} = 0.65V$
- b) What are the features of IC regulator? Explain dual tracking voltage regulator.
- c) Design a circuit to switch the system ON-OFF repeatedly for varying ON-OFF periods as follows -
 - 1) ON time variation = 1msec to 3msec
 - 2) OFF time variation = 0.5msec to 2msecSystem draws a current of 1.5A from 230V mains.
Use Proper IC to drive a relay of 12V, 40Ω .

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct Answer**14**

- 1) A pre-regulator is used with a transistor series regulator in order to _____.
 a) Increase the input resistance of series transistor
 b) Decrease the input resistance of series transistor
 c) Increase the output resistance of series transistor
 d) Increase the current gain of series transistor
- 2) Schmitt trigger is _____.
 a) Oscillator
 b) Amplifier
 c) Comparator
 d) All of these
- 3) Sine wave can be converted by _____.
 a) Rectifier
 b) Schmitt trigger
 c) Astable multivibrator
 d) All of these
- 4) In monostable multivibrator quasi stable state duration is _____.
 a) RC
 b) 0.7 RC
 c) 1.4 RC
 d) None of these
- 5) For selecting transistor in multi vibrator design, transistor used should have _____.
 a) less t_d
 b) more t_f
 c) less t_d and t_r
 d) less t_d , t_r , t_f , t_s
- 6) For IC regulators output capacitor is required for _____.
 a) Improving stability
 b) Short circuit protection
 c) Improve transient response
 d) Over voltage protection
- 7) In IC 555 discharge pin is _____.
 a) Pin No 2
 b) Pin No 7
 c) Pin No 4
 d) Pin No 6
- 8) Output resistance of current series negative feedback amplifier _____.
 a) Increases
 b) Decreases
 c) Does not change
 d) Becomes Unpredictable

- 9) When multistage amplifier is used to amplify DC signal then the coupling used is _____.
- a) Direct
 - b) Transformer
 - c) R-C
 - d) R-L
- 10) If the transistor is operated in such a way that output current flows for 60° of the input signal then its _____ operation.
- a) Class A
 - b) Class B
 - c) Class C
 - d) Class D
- 11) For Wein bridge oscillator a variable capacitor with 47pF and upper limit 470pF is used, what should be the value of fixed resistance required to provide upper frequency limit of 200kHz .
- a) 16.92 ohm
 - b) 20.92 ohm
 - c) 30.92 ohm
 - d) None of the these
- 12) When no signal is applied the approximate collector efficiency of Class A power amplifier is _____.
- a) 10%
 - b) 0%
 - c) 25%
 - d) 50%
- 13) The frequency response of transformer coupled amplifier is _____.
- a) Good
 - b) Very Good
 - c) Excellent
 - d) Poor
- 14) Cascading two amplifier stages will result in _____.
- a) reduction in gain and increase in bandwidth
 - b) reduction in gain and reduction in bandwidth
 - c) increase in gain and reduction in bandwidth

a) Rectifier b) Schmitt trigger
c) Astable multivibrator d) All of these
- 7) In monostable multivibrator quasi stable state duration is _____.
a) RC b) 0.7 RC
c) 1.4 RC d) None of these
- 8) For selecting transistor in multi vibrator design, transistor used should have _____.
a) less td b) moretf
c) less td and tr d) less td, tr, tf, ts

- 9) For IC regulators output capacitor is required for _____.
- a) Improving stability b) Short circuit protection
c) Improve transient response d) Over voltage protection
- 10) In IC 555 discharge pin is _____.
- a) Pin No 2 b) Pin No 7
c) Pin No 4 d) Pin No 6
- 11) Output resistance of current series negative feedback amplifier _____.
- a) Increases b) Decreases
c) Does not change d) Becomes Unpredictable
- 12) When multistage amplifier is used to amplify DC signal then the coupling used is _____.
- a) Direct b) Transformer
c) R-C d) R-L
- 13) If the transistor is operated in such a way that output current flows for 60° of the input signal then its _____ operation.
- a) Class A b) Class B
c) Class C d) Class D
- 14) For Wein bridge oscillator a variable capacitor with 47pF and upper limit 470 pF is used, what should be the value of fixed resistance required to provide upper frequency limit of 200KHz.
- a) 16.92 ohm b) 20.92 ohm
c) 30.92 ohm d) None of the these

**S.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ELECTRONICS CIRCUIT ANALYSIS AND DESIGN - II**

Day & Date: Friday, 22-11-2019
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
2) Assume suitable data if necessary
3) Figures to the right indicate full marks
4) Use of datasheet and non programmable calculator is allowed.

Section – I

Q.2 Attempt Any Four

16

- How overall low frequency response of n identical cascaded amplifier stage can be calculated? What will be overall lower 3dB frequency if three identical amplifier stages having lower cutoff frequency of 64Hz are cascaded?
- Discuss R-C coupled Multistage amplifier with its advantages and disadvantage. Draw its frequency response.
- What is Piezo electric effect? Explain the crystal oscillator circuit with its advantages.
- How power amplifiers are classified based on location of Q point on load line?
- Three amplifier stages are working in cascade with 0.05V peak to peak input providing 150Vpp output. If voltage gain of first stage is 20 and input to the third stage is 15Vpp Determine.
 - Overall voltage gain
 - Voltage gain of second and third stage
 - Input voltage of second stage
- A sinusoidal signal $V_s = 1.95 \sin 400t$ is applied to the power amplifier. The resulting current is
 $I_o = 12 \sin 400t + 1.2 \sin 800t + 0.9 \sin 1200t + 0.4 \sin 1600t$
 Calculate the total harmonic distortion and the percentage increase in power because of distortion.

Q.3 Attempt Any Two

12

- Design a wein bridge oscillator to provide peak to peak output voltage of 5V at the frequency of 5V at the frequency of 15KHz. Use $V_{CC} = 12V$.
- Design a class A transformer coupled amplifier to deliver 45mW to the load resistance of 40hm. Use supply voltage of 9Volts.
- What is the advantage of negative feedback in amplifiers? Discuss the effect of negative feedback on stability, Band width, noise, distortion, i/p resistance and o/p resistance for different types of negative feedback.

Section – II

Q.4 Attempt Any Four

16

- Derive a frequency of oscillation for Astable multivibrator using IC 555.
- Design an adjustable voltage regulator using LM-317 to satisfy following conditions- $V_o = 5V$ to 12V at output current of 1 A.
- Explain different triggering methods in transistorized multivibrator circuits.

- d) Design a constant current source using IC 7805 to source a current variation from 100mA to 200mA to the load variation of 10Ω to 30Ω .
- e) Explain Thermal Shutdown concept in IC Regulator.

Q.5 Attempt Any Two**12**

- a) Design a Transistorized series voltage regulator for given requirement
 $V_o = 25V$, at 50mA, $V_{in} = 30V$
Assume for Q1, $h_{fe1} = 100$, $h_{ie1} = 12K\Omega$, $V_{BE1} = 0.6V$
For Q2, $h_{fe2} = 150$, $h_{ie2} = 3K\Omega$, $V_{BE2} = 0.65V$
- b) What are the features of IC regulator? Explain dual tracking voltage regulator.
- c) Design a circuit to switch the system ON-OFF repeatedly for varying ON-OFF periods as follows -
 - 1) ON time variation = 1msec to 3msec
 - 2) OFF time variation = 0.5msec to 2msecSystem draws a current of 1.5A from 230V mains.
Use Proper IC to drive a relay of 12V, 40Ω .

S.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ELECTRONICS CIRCUIT ANALYSIS AND DESIGN – II

Day & Date: Friday, 22-11-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.
 2) Assume suitable data if necessary
 3) Figures to the right indicate full marks
 4) Use of datasheet and non programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct Answer**14**

- 1) Sine wave can be converted by _____.
 a) Rectifier b) Schmitt trigger
 c) Astable multivibrator d) All of these
- 2) In monostable multivibrator quasi stable state duration is _____.
 a) RC b) 0.7 RC
 c) 1.4 RC d) None of these
- 3) For selecting transistor in multi vibrator design, transistor used should have _____.
 a) less t_d b) more t_f
 c) less t_d and t_r d) less t_d , t_r , t_f , t_s
- 4) For IC regulators output capacitor is required for _____.
 a) Improving stability b) Short circuit protection
 c) Improve transient response d) Over voltage protection
- 5) In IC 555 discharge pin is _____.
 a) Pin No 2 b) Pin No 7
 c) Pin No 4 d) Pin No 6
- 6) Output resistance of current series negative feedback amplifier _____.
 a) Increases b) Decreases
 c) Does not change d) Becomes Unpredictable
- 7) When multistage amplifier is used to amplify DC signal then the coupling used is _____.
 a) Direct b) Transformer
 c) R-C d) R-L
- 8) If the transistor is operated in such a way that output current flows for 60° of the input signal then its _____ operation.
 a) Class A b) Class B
 c) Class C d) Class D

 2) Figures to the right indicate full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) A linear list of elements in which deletion can be done from one end (front) and insertion can take place only at the other end (rear) is known as a _____.
 - a) Queue
 - b) Stack
 - c) Tree
 - d) Linked list
- 2) In a circular linked list _____.
 - a) Components are all linked together in some sequential manner
 - b) There is no beginning and no end
 - c) Components are arranged hierarchically
 - d) Forward and backward traversal within the list is permitted
- 3) Pverflow condition of stack is _____.
 - a) front=rear=max-1
 - b) front=rear=0
 - c) top=max-1
 - d) none of the above
- 4) The postfix form of A*B+C/D is?
 - a) *AB/CD+
 - b) AB*CD/+
 - c) A*BC+/D
 - d) ABCD+/*
- 5) Which data structure is used for implementing recursion?
 - a) Queue
 - b) Stack
 - c) Array
 - d) List
- 6) Factorial (0) is _____.
 - a) 0
 - b) 1
 - c) infinity
 - d) Undefined
- 7) Linked lists are not suitable for _____.
 - a) Insertion sort
 - b) Binary search
 - c) Radix Sort
 - d) Polynominal manipulation
- 8) Binary trees can have how many children?
 - a) 2
 - b) any number of children
 - c) 0 or 1 or 2
 - d) 0 or 1
- 9) The Data structure used in standard implementation of Breadth First Search is _____.
 - a) Stack
 - b) Queue
 - c) Linked List

Section – I

- Q.2 Attempt any four of the following questions. 16**
- Explain the representation of doubly linked list with example.
 - What is double ended queue? Explain with neat diagram.
 - Write a C program to find the multiplication of two natural number with recursion function.
 - Explain difference between static memory allocation and dynamic memory allocation
 - Convert the following infix expression to postfix expression
 $A - B / (C * D \wedge E)$
- Q.3 Attempt any two of the following questions. 12**
- Write a C program to implement following operation on singly link list.
 - Creation of list
 - Insertion of element at end
 - Deletion of given element from the list
 - Display
 - Write an algorithm for Enqueue and Dequeue operation performed on Circular Queue.
 - Write a C program of stack using array.
- Q.4 Attempt any four of the following questions. 16**
- Explain various tree traversal methods with example.
 - Write a short note on B Tree and B+ Tree.
 - Explain bubble sort. Sort the following using bubble sort 36, 20, 68, 55, 94, 18, 41. Show the steps for each iteration.
 - Explain Binary search algorithm with example.
 - Differentiate between DFS and BFS.
- Q.5 Attempt any two of the following questions. 12**
- Define Graph and explain various graph representation techniques.
 - Write a C program to search an element from an array using linear search.
 - What is hash collision? Explain collision resolving techniques.

 3) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) Which of the following is closed loop system?
 - a) Electric switch
 - b) D-C generator
 - c) car starter
 - d) Autopilot for an air craft
- 2) The current in electrical circuit is analogous to _____ in mechanical translational system.
 - a) Mass (M)
 - b) displacement (x)
 - c) velocity
 - d) force (F)
- 3) A control system in which control action is dependent on output is known as _____.
 - a) Open loop system
 - b) semiclosed system
 - c) closed system
 - d) indeterminist
- 4) The characteristics equation $(S + 1)(S + 2)(S - 3)$ represents a _____.
 - a) Stable system
 - b) unstable system
 - c) marginally stable
 - d) indeterminist
- 5) The transfer function $P(S) = \frac{(2S+1)}{(S^2+S+1)}$ represents.
 - a) Stable system
 - b) unstable system
 - c) marginally stable
 - d) indeterminist
- 6) Which of following element is not used in automatic control system?
 - a) Sensor
 - b) error detector
 - c) Oscillator
 - d) final control element
- 7) From the signal flow graph shown in figure below, $x_6 =$

- a) $(ax_1 + bx_2 + cx_3)(d+e)$
- b) $(a+b+c)(x_1 + x_2 + x_3)(d + e)$
- c) $de(ax_1 + bx_2 + cx_3)$
- d) $abcde(x_1 + x_2 + x_3)$

**S.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
CONTROL SYSTEMS**

Day & Date: Monday, 25-11-2019
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
2) Figure to the right indicates full marks.
3) Assume suitable data if necessary.

Section – I

Q.2 Attempt any four questions. 16

- a) Define control system. Explain types of control system
b) Find transfer function of following system.

- c) Check stability of $2S^4 + 2S^3 + S^2 + 3S + 2 = 0$
d) What is translation motion? Explain the forces that resists translational motion.
e) When a system is said to be stable? What is effect of location of poles on stability when
1) poles on negative real axis
2) poles on positive axis
3) poles at origin

Q.3 a) Find transfer function of system given in figure. 06

- b) By means of Routh criterion, determine the stability of system given by characteristic equation 06

$$S^6 + 3S^5 + 5S^4 + 9S^3 + 8S^2 + 6S + 4 = 0$$

OR

- b) Find transfer function of signal flow graph given in figure by using Masson gain formula. 06

Section – II

- Q.4 Attempt any four questions.** 16

- a) Determine different error constants for a system having

$$G(S) = \frac{K}{S(S^2+2S+5)} \quad H(S) = \frac{10}{S+4}$$
 Also determine steady state error if input is $r(t) = 5+10t+t^2$
- b) Explain lead compensator.
- c) What is type of system and order of system? Explain type 0 and type 1 system.
- d) Define terms-
- a) delay time (t_d)
 - b) rise time (t_r)
 - c) peak overshoot (M_p)
 - d) settling time (t_s)
- e) Explain rules for construction of root locus.

- Q.5 Attempt any two** 12

- a) The forward path transfer function of unity feedback is given as

$$G(S) = \frac{K}{S(S+4)(S+5)}$$
 Sketch root locus as K varies from zero to infinity.
- b) A unity feedback system has $G(S) = \frac{10}{S(S+4)}$ If step input is applied calculate.
- 1) natural frequency of oscillation
 - 2) damping factor
 - 3) damping frequency
 - 4) peak time t_p
 - 5) delay time t_d
 - 6) peak overshoot M_p
- c) Sketch Bode plot for transfer function

$$G(S) = \frac{1000}{(1 + 0.1S)(1 + 0.001S)}$$
 Determine
- 1) Phase Margin
 - 2) Gain Margin
 - 3) Comment on stability of system

Seat No.

CONTROL SYSTEMS**

Day & Date: Monday, 25-11-2019
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.
2) Figures to right indicate full marks.
3) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) Which of the following compensator will be used to increase the bandwidth of a control system?
 - a) phase lag
 - b) phase lag lead
 - c) phase lead
 - d) none of above
- 2) For making an unstable system stable _____.
 - a) gain of system should be increased
 - b) gain of system should be decreased
 - c) the number of zeros to the open loop transfer function should be increased
 - d) the number of poles to the open loop transfer function should be increased
- 3) What will be nature of system, if the poles of system are lying on the imaginary axis in S-plane?
 - a) marginally stable
 - b) conditionally stable
 - c) stable
 - d) Zero
- 4) Damping is proportional to _____.
 - a) gain
 - b) $\frac{1}{\text{gain}}$
 - c) $\sqrt{\text{gain}}$
 - d) $\frac{1}{\sqrt{\text{gain}}}$
- 5) The type 1 system has _____ at the origin.
 - a) no pole
 - b) no zero
 - c) simple pole
 - d) two poles
- 6) Lag compensator reduces _____.
 - a) bandwidth
 - b) rise time
 - c) transient response
 - d) all of these
- 7) If both gain and phase margin are positive then the system is _____.
 - a) stable
 - b) unstable
 - c) indeterminist
 - d) marginally stable

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- The transfer function $P(S) = \frac{(2S+1)}{(S^2+S+1)}$ represents.
 - Stable system
 - unstable system
 - marginally stable
 - indeterminist
- Which of following element is not used in automatic control system?
 - Sensor
 - error detector
 - Oscillator
 - final control element
- From the signal flow graph shown in figure below, $x_6 =$

- $(ax_1 + bx_2 + cx_3)(d+e)$
 - $(a+b+c)(x_1 + x_2 + x_3)(d + e)$
 - $de(ax_1 + bx_2 + cx_3)$
 - $abcde(x_1 + x_2 + x_3)$
- Which of the following compensator will be used to increase the bandwidth of a control system?
 - phase lag
 - phase lag lead
 - phase lead
 - none of above
 - For making an unstable system stable _____.
 - gain of system should be increased
 - gain of system should be decreased
 - the number of zeros to the open loop transfer function should be increased
 - the number of poles to the open loop transfer function should be increased
 - What will be nature of system, if the poles of system are lying on the imaginary axis in S-plane?
 - marginally stable
 - conditionally stable
 - stable
 - Zero

- 7) Damping is proportional to _____.
a) gain
b) $\frac{1}{\text{gain}}$
c) $\sqrt{\text{gain}}$
d) $\frac{1}{\sqrt{\text{gain}}}$
- 8) The type 1 system has _____ at the origin.
a) no pole
b) no zero
c) simple pole
d) two poles
- 9) Lag compensator reduces _____.
a) bandwidth
b) rise time
c) transient response
d) all of these
- 10) If both gain and phase margin are positive then the system is _____.
a) stable
b) unstable
c) indeterminist
d) marginally stable
- 11) Which of the following is closed loop system?
a) Electric switch
b) D-C generator
c) car starter
d) Autopilot for an air craft
- 12) The current in electrical circuit is analogous to _____ in mechanical translational system.
a) Mass (M)
b) displacement (x)
c) velocity
d) force (F)
- 13) A control system in which control action is dependent on output is known as _____.
a) Open loop system
b) semiclosed system
c) closed system
d) indeterminist
- 14) The characteristics equation $(S + 1)(S + 2)(S - 3)$ represents a _____.
a) Stable system
b) unstable system
c) marginally stable
d) indeterminist

 3) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence.

14

- 1) $A_f = 1 + (R_f/R_i)$ represents _____.
 a) open loop gain of Non-Inverting Amplifier
 b) closed loop gain of Non-Inverting Amplifier
 c) open loop gain of Inverting Amplifier
 d) none of these
- 2) For summing amplifier ratio of R_f/R should be _____.
 a) less than one
 b) greater than one
 c) zero
 d) one
- 3) Introduction of negative feedback _____.
 a) makes gain infinite
 b) make bandwidth infinite
 c) stabilizes gain
 d) none of these
- 4) Gain bandwidth product of IC741 is _____.
 a) 10 MHz
 b) 1MHz
 c) Infinite
 d) 1KHz
- 5) $V_{o_{cm}}/V_{cm}$ represents _____.
 a) CMRR
 b) open loop voltage gain
 c) A_{cm}
 d) voltage rejection ratio
- 6) Maximum value of dV_o/dt is called _____.
 a) voltage ratio
 b) voltage rate
 c) slew rate
 d) transient response
- 7) The gain of the basic differentiator increases with increase in frequency till it touches open loop response _____.
 a) True
 b) False
- 8) What is the purpose of the op amp within active filters?
 a) Impedance matching
 b) to alleviate filter losses
 c) Easy adjustment over a wide frequency range
 d) all of above
- 9) For peak detector which of the following is true _____.
 a) $CR_d \leq T/10$
 b) $CR_L \geq 10T$
 c) Both a and b
 d) None of these

- 10) _____ circuit converts irregular shape into square wave or pulse.
- | | |

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence.

14

- 1) What is the purpose of the op amp within active filters?
 - a) Impedance matching
 - b) to alleviate filter losses
 - c) Easy adjustment over a wide frequency range
 - d) all of above
- 2) For peak detector which of the following is true _____.
 - a) $CR_d \leq T/10$
 - b) $CR_L \geq 10T$
 - c) Both a and b
 - d) None of these
- 3) _____ circuit converts irregular shape into square wave or pulse.
 - a) Schmitt Trigger
 - b) Clamper
 - c) Peak Detector
 - d) Window Detector
- 4) Which of the following circuit is called as dc inserter?
 - a) dc amplifier
 - b) Schmitt trigger
 - c) Clampers
 - d) Zero crossing Detector
- 5) Which block of PLL provides flywheel action for smoothing as dc inserter?
 - a) Filter
 - b) VCO
 - c) Phase Detector
 - d) Level Shifter
- 6) Active filters offers below advantages over passive filters _____.
 - a) Flexibility in design
 - b) Gain adjustment
 - c) Both a and b
 - d) None of these
- 7) For a quadrature oscillator, If $f_o = 1.59\text{KHz}$ and $C=0.01 \mu\text{F}$ then $R=?$
 - a) $10\text{K}\Omega$
 - b) $100 \text{K}\Omega$
 - c) $1\text{K}\Omega$
 - d) $15.9 \text{K}\Omega$
- 8) $A_f=1+(R_f/R_1)$ represents _____.
 - a) open loop gain of Non-Inverting Amplifier
 - b) closed loop gain of Non-Inverting Amplifier
 - c) open loop gain of Inverting Amplifier
 - d) none of these

- 9) For summing amplifier ratio of R_f/R should be _____.
a) less than one b) greater than one
c) zero d) one
- 10) Introduction of negative feedback _____.
a) makes gain infinite b) make bandwidth infinite
c) stabilizes gain d) none of these

Section – I

- Q.2 Attempt any four.** **16**
- a) Consider an inverting amplifier with feedback with $R_f=5K\Omega$, $R_1=100\Omega$, $A_f=50$, slew rate= $0.5 V/\mu\text{sec}$. Calculate V_p .
 - b) Prove that for a Non-inverting amplifier with feedback, $f_f= f_o(1+AB)$
 - c) For an AC inverting amplifier, derive equation for lower cut-off frequency.
 - d) Explain V to I converter with floating load.
 - e) Design a Inverting amplifier using op-amp 741 for closed loop gain of 7.
- Q.3 Attempt any two.** **12**
- a) Derive the I_{CEQ} and V_{CEQ} for DIBO differential amplifier.
 - b) Design a differentiator to differentiate an input signal that varies in frequency from 10 Hz to 1 KHz.
 - c) State any six specifications of IC 741.

Section – II

- Q.4 Attempt any four.** **16**
- a) Explain positive clipper using op amp.
 - b) Explain Log amplifier.
 - c) Draw and explain Sample and Hold Circuit.
 - d) Draw and explain quadrature oscillator.
 - e) Design a Second order low pass Butterworth filter with $f_H= 1.5KHz$.
- Q.5 Attempt any two.** **12**
- a) Draw and explain Wein bridge Oscillator with a proof of $f_0= 1/2\pi RC$.
 - b) Explain Frequency Multiplier using PLL.
 - c) Explain Half Wave precision rectifier with waveforms.

S.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019
Electronic & Telecommunication Engineering
LINEAR INTEGRATED CIRCUIT

Day & Date: Tuesday, 26-11-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.
 2) Figures to the right indicate full marks.
 3) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence.

14

- 1) $V_{o_{cm}}/V_{cm}$ represents _____.
 a) CMRR
 b) open loop voltage gain
 c) A_{cm}
 d) voltage rejection ratio
- 2) Maximum value of dV_o/dt is called _____.
 a) voltage ratio
 b) voltage rate
 c) slew rate
 d) transient response
- 3) The gain of the basic differentiator increases with increase in frequency till it touches open loop response _____.
 a) True
 b) False
- 4) What is the purpose of the op amp within active filters?
 a) Impedance matching
 b) to alleviate filter losses
 c) Easy adjustment over a wide frequency range
 d) all of above
- 5) For peak detector which of the following is true _____.
 a) $CR_d \leq T/10$
 b) $CR_L \geq 10T$
 c) Both a and b
 d) None of these
- 6) _____ circuit converts irregular shape into square wave or pulse.
 a) Schmitt Trigger
 b) Clamper
 c) Peak Detector
 d) Window Detector
- 7) Which of the following circuit is called as dc inserter?
 a) dc amplifier
 b) Schmitt trigger
 c) Clampers
 d) Zero crossing Detector
- 8) Which block of PLL provides flywheel action for smoothing as dc inserter?
 a) Filter
 b) VCO
 c) Phase Detector
 d) Level Shifter
- 9) Active filters offers below advantages over passive filters _____.
 a) Flexibility in design
 b) Gain adjustment
 c) Both a and b
 d) None of these

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence.

14

- 1) _____ circuit converts irregular shape into square wave or pulse.
 - a) Schmitt Trigger
 - b) Clamper
 - c) Peak Detector
 - d) Window Detector
- 2) Which of the following circuit is called as dc inserter?
 - a) dc amplifier
 - b) Schmitt trigger
 - c) Clampers
 - d) Zero crossing Detector
- 3) Which block of PLL provides flywheel action for smoothing as dc inserter?
 - a) Filter
 - b) VCO
 - c) Phase Detector
 - d) Level Shifter
- 4) Active filters offers below advantages over passive filters _____.
 - a) Flexibility in design
 - b) Gain adjustment
 - c) Both a and b
 - d) None of these
- 5) For a quadrature oscillator, If $f_o = 1.59\text{KHz}$ and $C=0.01 \mu\text{F}$ then $R=?$
 - a) $10\text{K}\Omega$
 - b) $100 \text{K}\Omega$
 - c) $1\text{K}\Omega$
 - d) $15.9 \text{K}\Omega$
- 6) $A_f=1+(R_f/R_1)$ represents _____.
 - a) open loop gain of Non-Inverting Amplifier
 - b) closed loop gain of Non-Inverting Amplifier
 - c) open loop gain of Inverting Amplifier
 - d) none of these
- 7) For summing amplifier ratio of R_f/R should be _____.
 - a) less than one
 - b) greater than one
 - c) zero
 - d) one
- 8) Introduction of negative feedback _____.
 - a) makes gain infinite
 - b) make bandwidth infinite
 - c) stabilizes gain
 - d) none of these
- 9) Gain bandwidth product of IC741 is _____.
 - a) 10 MHz
 - b) 1MHz
 - c) Infinite
 - d) 1KHz

- 10) $V_{o_{cm}}/V_{cm}$ represents _____.
a) CMRR
b) open loop voltage gain
c) A_{cm}
d) voltage rejection ratio
- 11) Maximum value of dV_o/dt is called _____.
a) voltage ratio
b) voltage rate
c) slew rate
d) transient response
- 12) The gain of the basic differentiator increases with increase in frequency till it touches open loop response _____.
a) True
b) False
- 13) What is the purpose of the op amp within active filters?
a) Impedance matching
b) to alleviate filter losses
c) Easy adjustment over a wide frequency range
d) all of above
- 14) For peak detector which of the following is true _____.
a) $CR_d \leq T/10$
b) $CR_L \geq 10T$
c) Both a and b
d) None of these

Electronics & Telecommunication Engineering
SIGNALS AND SYSTEMS

Day & Date: Wednesday, 27-11-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) All questions are compulsory.
 2) Assume suitable data if necessary

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) If $x[4-n]$ is derived from the $x[n]$ by which transformation?
 - a) Reversal and shift
 - b) reversal only
 - c) Scaling
 - d) scaling and shifting
- 2) Mathematically unit impulse is a derivative of _____.
 - a) Unit step
 - b) unit ramp
 - c) Unit parabola
 - d) None
- 3) With $u(n)$ as unit step function, $u(n)-u(n-2)$ is.
 - a) $\delta(n)$
 - b) $\delta(n) + \delta(n - 1)$
 - c) $\delta(n) + \delta(n - 2)$
 - d) $\delta(n) + \delta(n + 1)$
- 4) Which system is non-causal system?
 - a) $y(t) = x(t + 1)$
 - b) $y(t) = x(t - 1)$
 - c) $y(t) = x(t) + c$
 - d) $y(t) = x(t) - c$
- 5) Find the convolution of $x(n) = \{1,2,3\}$ $h(n) = \{1,2\}$.
 - a) $\{1,2,5,6\}$
 - b) $\{0,4,3,1\}$
 - c) $\{1,4,7,6\}$
 - d) $\{4,2,3,1\}$
- 6) Time transformations are _____.
 - a) Time shifting
 - b) Time scaling
 - c) Time reversal
 - d) All
- 7) Find the time period of $x(t) = \sin(50t)$ _____.
 - a) 25π
 - b) 50
 - c) $\pi/2$
 - d) $\pi/25$
- 8) For the successful reconstruction of signals _____.
 - a) Sampling frequency must be equal to the message signal
 - b) Sampling frequency must be greater to the message signal
 - c) Sampling frequency must be less to the message signal
 - d) Sampling frequency must be greater than or equal to the message signal
- 9) What is the z-transform of the finite duration signal _____.
 $x(n) = \{2,4,5,7,0,1\}$
 - a) $2 + 4z + 5z^2 + 7z^3 + z^4$
 - b) $2 + 4z + 5z^2 + 7z^3 + z^5$
 - c) $2 + 4z^{-1} + 5z^{-2} + 7z^{-3} + z^{-5}$
 - d) $2z^2 + 4z + 5 + 7z^{-1} + z^{-3}$

- 10) If $x(n)=u(n)-u(n-4)$ then ROC is _____.
- Entire Z plane
 - Entire Z plane, except $z = 0$
 - Entire Z plane, except $z = \infty$
 - Entire Z plane, except $z = 0$ and except $z = \infty$
- 11) Which of the following justifies the linearity property of z-transform?
 $[x(n) \leftrightarrow X(z)]$.
- $ax(n) + by(n) \leftrightarrow aX(z)bY(z)$
 - $ax(n) + by(n) \leftrightarrow aX(z) + bY(z)$
 - $ax(n)by(n) \leftrightarrow aX(z) + bY(z)$
 - $ax(n)by(n) \leftrightarrow aX(z)bY(z)$
- 12) Duality property is _____.
- $X(t) \leftrightarrow 2\pi x(-w)$
 - $X(-t) \leftrightarrow 2x(-w)$
 - $X(at) \leftrightarrow 1/a X(w/a)$
 - $(-jt) X(t) \leftrightarrow 2x\pi(-w)$
- 13) Fourier transform of Sgn (t) is _____.
- 1
 - $-2/jw$
 - $2/jw$
 - 0
- 14) What does the first term 'a0' in the below stated expression of a line spectrum indicate?
 $x(t) = a_0 + a_1 \cos w_0 t + a_2 \cos^2 w_0 t + \dots + b_1 \sin w_0 t + b_2 \sin w_0 t + \dots$
- DC component
 - Fundamental component
 - Second harmonic component
 - All of the above

SIGNALS AND SYSTEMS

Day & Date: Wednesday, 27-11-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Assume suitable data if necessary

Section – I**Q.2 Attempt any three of the following questions.****12**

- a) For the signal shown in fig. find following.
 1) $x(2t+2)$
 2) $x(3-t/2)$

- b) Check the causal/non-causal and Linear/Non-linear $Y(t)=e^{x(t)}$.
 c) Find the convolution using graphical method $x(n) = \{1,2,3,3\}$ $h(n) = \{1,2,2\}$.
 d) Find the step response if the impulse response is $e^{-2t} u(t)$.

Q.3 Attempt any two of the following questions.**16**

- a) Explain the transformations on independent variables with examples.
 b) Determine following system is $y(t) = \text{even}\{x(t)\}$.
 1) Causal/non-causal
 2) Linear/Non-linear
 3) Time Variant- invariant
 c) Find even and odd part of the given signal $x(n) = \{3,2,1,1,1,2,1,1\}$.

Section – II**Q.4 Attempt any three of the following questions.****12**

- a) Define Aliasing error. Explain how it can be avoided?
 b) Find Z-transform with its ROC of $x(n) = (2)^n \cdot u(n) + (3)^n \cdot u(-n-1)$.
 c) Find inverse Z- transform $X(Z) = \frac{Z^2+Z}{(Z-1)^2}$, Right sided sequence using partial fraction expansion method.
 d) Find Fourier transform of $x(t) = \cos \omega_0 t$.

Q.5 Attempt any two of the following questions.**16**

- a) Consider the analog signal
 $X(t) = 3 \cos 2000\pi t + 5 \sin 6000\pi t + 10 \cos 1000\pi t$
 1) What is Nyquist sampling rate?
 2) The signal is sampled using $f_s = 5000$ Hz. What is DT signal?
 b) Determine the sequence $x(n)$ associated with Z.T given below using power series method.

$$X[Z] = \frac{Z^2 + Z}{Z^3 - 3Z^2 + 3Z - 1}; |z| > 1 \text{ ROC}$$

- c) Find the exponential Fourier series & plot the magnitude & phase spectrum of full wave rectified time domain signal having amplitude E_m and $T_0 = \pi$

Seat No.

Max. Marks: 70

Instructions: 1) All questions are compulsory.
 2) Assume suitable data if necessary

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) For the successful reconstruction of signals _____.
 - a) Sampling frequency must be equal to the message signal
 - b) Sampling frequency must be greater to the message signal
 - c) Sampling frequency must be less to the message signal
 - d) Sampling frequency must be greater than or equal to the message signal

- 2) What is the z-transform of the finite duration signal _____.
 $x(n) = \{2, 4, 5, 7, 0, 1\}$?
 - a) $2 + 4z + 5z^2 + 7z^3 + z^4$
 - b) $2 + 4z + 5z^2 + 7z^3 + z^5$
 - c) $2 + 4z^{-1} + 5z^{-2} + 7z^{-3} + z^{-5}$
 - d) $2z^2 + 4z + 5 + 7z^{-1} + z^{-3}$

- 3) If $x(n) = u(n) - u(n-4)$ then ROC is _____.
 - a) Entire Z plane
 - b) Entire Z plane, except $z = 0$
 - c) Entire Z plane, except $z = \infty$
 - d) Entire Z plane, except $z = 0$ and $z = \infty$

- 4) Which of the following justifies the linearity property of z-transform?
 $[x(n) \leftrightarrow X(z)]$.
 - a) $ax(n) + by(n) \leftrightarrow aX(z)bY(z)$
 - b) $ax(n) + by(n) \leftrightarrow aX(z) + bY(z)$
 - c) $ax(n)by(n) \leftrightarrow aX(z) + bY(z)$
 - d) $ax(n)by(n) \leftrightarrow aX(z)bY(z)$

- 5) Duality property is _____.
 - a) $X(t) \leftrightarrow 2\pi x(-w)$
 - b) $X(-t) \leftrightarrow 2x(-w)$
 - c) $X(at) \leftrightarrow 1/a X(w/a)$
 - d) $(-jt) X(t) \leftrightarrow 2x\pi(-w)$

- 6) Fourier transform of Sgn (t) is _____.
 - a) 1
 - b) $-2/jw$
 - c) $2/jw$
 - d) 0

- 7) What does the first term 'a0' in the below stated expression of a line spectrum indicate?
 $x(t) = a_0 + a_1 \cos w_0 t + a_2 \cos^2 w_0 t + \dots + b_1 \sin w_0 t + b_2 \sin w_0 t + \dots$
 - a) DC component
 - b) Fundamental component
 - c) Second harmonic component
 - d) All of the above

- 8) If $x[4-n]$ is derived from the $x[n]$ by which transformation?
a) Reversal and shift b) reversal only
c) Scaling d) scaling and shifting
- 9) Mathematically unit impulse is a derivative of _____.
a) Unit step b) unit ramp
c) Unit parabola d) None
- 10) With $u(n)$ as unit step function, $u(n)-u(n-2)$ is.
a) $\delta(n)$ b) $\delta(n) + \delta(n - 1)$
c) $\delta(n) + \delta(n - 2)$ d) $\delta(n) + \delta(n + 1)$
- 11) Which system is non-causal system?
a) $y(t) = x(t + 1)$ b) $y(t) = x(t - 1)$
c) $y(t) = x(t) + c$ d) $y(t) = x(t) - c$
- 12) Find the convolution of $x(n) = \{1,2,3\}$ $h(n) = \{1,2\}$.
a) $\{1,2,5,6\}$ b) $\{0,4,3,1\}$
c) $\{1,4,7,6\}$ d) $\{4,2,3,1\}$
- 13) Time transformations are _____.
a) Time shifting b) Time scaling
c) Time reversal d) All
- 14) Find the time period of $x(t) = \sin(50t)$ _____.
a) 25π b) 50
c) $\pi/2$ d) $\pi/25$

 - c) Entire Z plane, except $z = \infty$
 - d) Entire Z plane, except $z = 0$ and $z = \infty$
- 2) Which of the following justifies the linearity property of z-transform? $[x(n) \leftrightarrow X(z)]$.
 - a) $ax(n) + by(n) \leftrightarrow aX(z)bY(z)$
 - b) $ax(n) + by(n) \leftrightarrow aX(z) + bY(z)$
 - c) $ax(n)by(n) \leftrightarrow aX(z) + bY(z)$
 - d) $ax(n)by(n) \leftrightarrow aX(z)bY(z)$
- 3) Duality property is _____.
 - a) $X(t) \leftrightarrow 2\pi x(-w)$
 - b) $X(-t) \leftrightarrow 2x(-w)$
 - c) $X(at) \leftrightarrow 1/a X(w/a)$
 - d) $(-jt) X(t) \leftrightarrow 2x\pi(-w)$
- 4) Fourier transform of Sgn (t) is _____.
 - a) 1
 - b) $-2/jw$
 - c) $2/jw$
 - d) 0
- 5) What does the first term 'a0' in the below stated expression of a line spectrum indicate?

$$x(t) = a_0 + a_1 \cos w_0 t + a_2 \cos^2 w_0 t + \dots + b_1 \sin w_0 t + b_2 \sin w_0 t + \dots$$
 - a) DC component
 - b) Fundamental component
 - c) Second harmonic component
 - d) All of the above
- 6) If $x[4-n]$ is derived from the $x[n]$ by which transformation?
 - a) Reversal and shift
 - b) reversal only
 - c) Scaling
 - d) scaling and shifting
- 7) Mathematically unit impulse is a derivative of _____.
 - a) Unit step
 - b) unit ramp
 - c) Unit parabola
 - d) None
- 8) With $u(n)$ as unit step function, $u(n)-u(n-2)$ is.
 - a) $\delta(n)$
 - b) $\delta(n) + \delta(n - 1)$
 - c) $\delta(n) + \delta(n - 2)$
 - d) $\delta(n) + \delta(n + 1)$
- 9) Which system is non-causal system?
 - a) $y(t) = x(t + 1)$
 - b) $y(t) = x(t - 1)$
 - c) $y(t) = x(t) + c$
 - d) $y(t) = x(t) - c$

- 10) Find the convolution of $x(n) = \{1,2,3\}$ $h(n) = \{1,2\}$.
a) $\{1,2,5,6\}$ b) $\{0,4,3,1\}$
c) $\{1,4,7,6\}$ d) $\{4,2,3,1\}$
- 11) Time transformations are _____.
a) Time shifting b) Time scaling
c) Time reversal d) All
- 12) Find the time period of $x(t) = \sin(50t)$ _____.
a) 25π b) 50
c) $\pi/2$ d) $\pi/25$
- 13) For the successful reconstruction of signals _____.
a) Sampling frequency must be equal to the message signal
b) Sampling frequency must be greater to the message signal
c) Sampling frequency must be less to the message signal
d) Sampling frequency must be greater than or equal to the message signal
- 14) What is the z-transform of the finite duration signal _____.
 $x(n) = \{2,4,5,7,0,1\}$?
a) $2 + 4z + 5z^2 + 7z^3 + z^4$ b) $2 + 4z + 5z^2 + 7z^3 + z^5$
c) $2 + 4z^{-1} + 5z^{-2} + 7z^{-3} + z^{-5}$ d) $2z^2 + 4z + 5 + 7z^{-1} + z^{-3}$

S.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
SIGNALS AND SYSTEMS

Day & Date: Wednesday, 27-11-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Assume suitable data if necessary

Section – I**Q.2 Attempt any three of the following questions.****12**

- a) For the signal shown in fig. find following.
 1) $x(2t+2)$
 2) $x(3-t/2)$

- b) Check the causal/non-causal and Linear/Non-linear $Y(t)=e^{x(t)}$.
 c) Find the convolution using graphical method $x(n) = \{1,2,3,3\}$ $h(n) = \{1,2,2\}$.
 d) Find the step response if the impulse response is $e^{-2t} u(t)$.

Q.3 Attempt any two of the following questions.**16**

- a) Explain the transformations on independent variables with examples.
 b) Determine following system is $y(t)=\text{even}\{x(t)\}$.
 1) Causal/non-causal
 2) Linear/Non-linear
 3) Time Variant- invariant
 c) Find even and odd part of the given signal $x(n) = \{3,2,1,1,1,2,1,1\}$.

Section – II**Q.4 Attempt any three of the following questions.****12**

- a) Define Aliasing error. Explain how it can be avoided?
 b) Find Z-transform with its ROC of $x(n)=(2)^n \cdot u(n)+(3)^n \cdot u(-n-1)$.
 c) Find inverse Z- transform $X(Z) = \frac{Z^2+Z}{(Z-1)^2}$, Right sided sequence using partial fraction expansion method.
 d) Find Fourier transform of $x(t) = \text{COS}W_0 t$.

Q.5 Attempt any two of the following questions.**16**

- a) Consider the analog signal
 $X(t) = 3 \cos 2000\pi t + 5 \sin 6000\pi t + 10 \cos 1000\pi t$
 1) What is Nyquist sampling rate?
 2) The signal is sampled using $f_s = 5000$ Hz. What is DT signal?
 b) Determine the sequence $x(n)$ associated with Z.T given below using power series method.

$$X[Z] = \frac{Z^2 + Z}{Z^3 - 3Z^2 + 3Z - 1}; |z| > 1 \text{ ROC}$$

- c) Find the exponential Fourier series & plot the magnitude & phase spectrum of full wave rectified time domain signal having amplitude E_m and $T_0 = \pi$

Seat No.

T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ELECTRO MAGNETIC ENGINEERING & RADIATING SYSTEM

Day & Date: Friday, 06-12-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.
 2) Use of non-programmable calculator is allowed.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) A point is obtained by intersection of _____ in spherical co-ordinates.
 - a) 3 planes
 - b) 2 planes and circle
 - c) plane, circle and a cone
 - d) none of these
- 2) Which of the following is meaningless combination?
 - a) grad div
 - b) curl div
 - c) curl grad
 - d) none of these
- 3) If the direction of Coulomb's Force on a unit charge is \bar{a}_x , the direction of electric field intensity is _____.
 - a) \bar{a}_y
 - b) $-\bar{a}_x$
 - c) \bar{a}_z
 - d) \bar{a}_x
- 4) If pair of $+ve$ & $-ve$ charges of $2C$ separated by distance $3\mu m$ then the magnitude of dipole moment is _____.
 - a) $2 C - \mu m$
 - b) $1.5 C - m$
 - c) $6 C - \mu m$
 - d) $3 C - \mu m$
- 5) If E is a vector then $\nabla \cdot \nabla \times E$ is _____.
 - a) 1
 - b) 0
 - c) ∞
 - d) doesn't exist
- 6) The unit of Electric field Intensity is _____.
 - a) N/C
 - b) V-m
 - c) J-C/m
 - d) All of these
- 7) If the voltage applied across the capacitor is increased, the capacitance value _____.
 - a) increases
 - b) Decreases
 - c) remains constant
 - d) becomes infinity
- 8) A quantitative relation between induced emf and rate of change of flux linkage is known as _____.
 - a) Maxwell's law
 - b) Stoke's law
 - c) Lenz's law
 - d) Faraday's law

- 9) What is the flux density of a magnetic field whose flux is $3000 \mu\text{Wb}$ and cross-sectional area is 0.25 m^2 ?
- $12,000 \mu\text{T}$
 - 83330 T
 - 0 T
 - insufficient information provided
- 10) When the speed at which a conductor is moved through a magnetic field is increased, the induced voltage _____
- increases
 - Decreases
 - remains constant
 - reaches zero
- 11) One of this is NOT the source of magnetic fields _____.
- a DC current in wire
 - a permanent magnet
 - an accelerated charge
 - an electric field linearly changing with time
- 12) Two identical coaxial circular coils carry the same current I but in opposite directions. The magnitude of magnetic field B at a point midway between coils is _____.
- Zero
 - same as that produced by one coil
 - twice that produced by one coil
 - half of that produced by one coil
- 13) Poynting vector is _____.
- $P = \vec{E} \cdot \vec{H}$
 - $P = 1/2(\vec{E} \times \vec{H})$
 - $P = \vec{E} \times \vec{H}$
 - $P = \nabla \cdot (\vec{E} \times \vec{H})$
- 14) Two media are characterized as _____.
- $\mu_r = 1, \epsilon_r = 4$ and $\sigma = 0$
 - $\mu_r = 4, \epsilon_r = 4$ and $\sigma = 0$
- Where: ϵ_r = relative permittivity, μ_r = relative permeability and σ = conductivity
The ratio of the intrinsic impedance of the media 2 to media 1 is _____.
- 2:1
 - 1:2
 - 1:1
 - 2:2

T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ELECTRO MAGNETIC ENGINEERING & RADIATING SYSTEM

Day & Date: Friday, 06-12-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicates full marks.

Section – I

Q.2 Attempt any three. **12**

- a) State and prove Gauss' law.
- b) Determine the total charge inside the volume indicated by
 $\rho_v = 4xyz^2$ if $0 \leq \rho \leq 2, 0 \leq \Phi \leq \frac{\pi}{2}, 0 \leq z \leq 3$
- c) A point charge of 6 nC located at origin in free space. Find V_{PQ} if point P is located at (0.2, -0.4, 0.4) & Q is at (-0.5, 1, -1). Also find V_P if $V = 20$ V at point Q.
- d) Electric dipole located at origin in free space has dipole moment
 $\vec{p} = 3\vec{a}_x - 2\vec{a}_y + \vec{a}_z$ nC-m. Find V at $P(2, 3, 4)$.

Q.3 Attempt any two. **16**

- a) Find \vec{E} at $P(1, 5, 2)$ in free space due to
 - 1) A point charge of 6 μ C is located at $Q(0, 0, 1)$.
 - 2) uniform line charge of 180 nC/m lies along x axis.
 - 3) a sheet charge of 20 nC/m² is placed at $y = 3$.
- b) Derive the equation for \vec{E} due to infinite sheet charge placed in $z=0$ plane.
- c) Establish the boundary condition for dielectric boundary having permeability ϵ_1 and ϵ_2 .

Section – II

Q.4 Attempt any three. **12**

- a) State and explain Ampere's circuital law.
- b) Write a note on antenna field zones.
- c) In a medium if $\vec{E} = E_m \sin \alpha \cos(\omega t - \beta z) \vec{a}_y$ V/m find \vec{H} .
- d) If magnetic field intensity in a region is $\vec{H} = x^2 \vec{a}_x + 2yz \vec{a}_y - x^2 \vec{a}_z$ find current density at point $P(2, 3, 4)$.

Q.5 Attempt any two. **16**

- a) Derive Maxwell's equations in point and integral form for time varying field.
- b) Evaluate both sides of Stroke's theorem for the field
 $\vec{H} = \left(\frac{y^2 z}{x}\right) \vec{a}_x + \left(0.5 \frac{y^2 z^2}{x^2}\right) \vec{a}_z$ crossing the square surface in the plane $y = 2$ bounded by $x = z = 1$ and $x = z = 2$.
- c) With a neat diagram explain Broadside, End fire and Yagi-Uda array.

 - c) an accelerated charge
 - d) an electric field linearly changing with time
- 3) Two identical coaxial circular coils carry the same current I but in opposite directions. The magnitude of magnetic field B at a point midway between coils is _____.
 - a) Zero
 - b) same as that produced by one coil
 - c) twice that produced by one coil
 - d) half of that produced by one coil
- 4) Poynting vector is _____.
 - a) $P = \vec{E} \cdot \vec{H}$
 - b) $P = 1/2(\vec{E} \times \vec{H})$
 - c) $P = \vec{E} \times \vec{H}$
 - d) $P = \nabla \cdot (\vec{E} \times \vec{H})$
- 5) Two media are characterized as _____.
 - 1) $\mu_r = 1, \epsilon_r = 4$ and $\sigma = 0$
 - 2) $\mu_r = 4, \epsilon_r = 4$ and $\sigma = 0$
 Where: ϵ_r = relative permittivity, μ_r = relative permeability and σ = conductivity
 The ratio of the intrinsic impedance of the media 2 to media 1 is _____.
 - a) 2:1
 - b) 1:2
 - c) 1:1
 - d) 2:2
- 6) A point is obtained by intersection of _____ in spherical co-ordinates.
 - a) 3 planes
 - b) 2 planes and circle
 - c) plane, circle and a cone
 - d) none of these
- 7) Which of the following is meaningless combination?
 - a) grad div
 - b) curl div
 - c) curl grad
 - d) none of these

T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
ELECTRO MAGNETIC ENGINEERING & RADIATING SYSTEM

Day & Date: Friday, 06-12-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicates full marks.

Section – I

Q.2 Attempt any three. **12**

- a) State and prove Gauss' law.
- b) Determine the total charge inside the volume indicated by
 $\rho_v = 4xyz^2$ if $0 \leq \rho \leq 2, 0 \leq \Phi \leq \frac{\pi}{2}, 0 \leq z \leq 3$
- c) A point charge of 6 nC located at origin in free space. Find V_{PQ} if point P is located at (0.2, -0.4, 0.4) & Q is at (-0.5, 1, -1). Also find V_P if $V = 20$ V at point Q.
- d) Electric dipole located at origin in free space has dipole moment
 $\vec{p} = 3\vec{a}_x - 2\vec{a}_y + \vec{a}_z$ nC-m. Find V at $P(2, 3, 4)$.

Q.3 Attempt any two. **16**

- a) Find \vec{E} at $P(1, 5, 2)$ in free space due to
 - 1) A point charge of 6 μ C is located at $Q(0, 0, 1)$.
 - 2) uniform line charge of 180 nC/m lies along x axis.
 - 3) a sheet charge of 20 nC/m² is placed at $y = 3$.
- b) Derive the equation for \vec{E} due to infinite sheet charge placed in $z=0$ plane.
- c) Establish the boundary condition for dielectric boundary having permeability ϵ_1 and ϵ_2 .

Section – II

Q.4 Attempt any three. **12**

- a) State and explain Ampere's circuital law.
- b) Write a note on antenna field zones.
- c) In a medium if $\vec{E} = E_m \sin \alpha \cos(\omega t - \beta z) \vec{a}_y$ V/m find \vec{H} .
- d) If magnetic field intensity in a region is $\vec{H} = x^2 \vec{a}_x + 2yz \vec{a}_y - x^2 \vec{a}_z$ find current density at point $P(2, 3, 4)$.

Q.5 Attempt any two. **16**

- a) Derive Maxwell's equations in point and integral form for time varying field.
- b) Evaluate both sides of Stroke's theorem for the field
 $\vec{H} = \left(\frac{y^2 z}{x}\right) \vec{a}_x + \left(0.5 \frac{y^2 z^2}{x^2}\right) \vec{a}_z$ crossing the square surface in the plane $y = 2$ bounded by $x = z = 1$ and $x = z = 2$.
- c) With a neat diagram explain Broadside, End fire and Yagi-Uda array.

- 10) For a BPSK scheme, the bit error probability is given by _____.
- a) $\frac{1}{2} \operatorname{erfc} \sqrt{\frac{E_b}{2\eta_0}}$ b) $\frac{1}{2} \operatorname{erfc} \frac{1}{2} \sqrt{\frac{E_b}{2\eta_0}}$
- c) $\frac{1}{2} \operatorname{erfc} \sqrt{\frac{E_b}{\eta_0}}$ d) $\frac{1}{2} \operatorname{erfc} \frac{1}{2} \sqrt{\frac{E_b}{\eta_0}}$
- 11) A rectangular pulse of duration T is applied to a filter matched to the input. The output of filter is _____.
- a) Rectangular pulse of duration T
 b) Rectangular pulse of duration 2T
 c) Triangular pulse
 d) Sine function
- 12) Which of the following operations is not performed in a Multicarrier communication transmitter?
- a) Add Cyclic prefix b) Serial to parallel convert
 c) Fast Fourier Transform d) Autocorrelation
- 13) The minimum distance of a block code is defined as the _____.
 a) the number of bits in which two successive code words differ
 b) the smallest hamming distance between any pair of code words
 c) the minimum weight of any of the code words
 d) the distance which can detect and correct one bit error
- 14) A linear block code has following property _____.
 a) It is always systematic code
 b) When two valid codewords are added, the resultant is also a valid codeword
 c) It can detect one bit error and correct two bit errors
 d) both a) and b) above

Seat
No.

T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
PRINCIPLES OF DIGITAL COMMUNICATION

Day & Date: Monday, 09-12-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figure to the right indicates full marks.
 3) Assume suitable data whenever necessary.

Section – I

Q.2 Answer any Four.

16

- An event has six possible outcomes with probabilities $1/2$, $1/4$, $1/8$, $1/16$, $1/32$ and $1/32$ respectively. Find the entropy of the system. Also find the rate of information if there are 16 outcomes per second.
- Explain symbol synchronization technique.
- Compare BPSK and BFSK modulation schemes.
- With block diagram explain working of DPCM.
- Explain the operation of a scrambler and unscrambler.

Q.3 Answer any Two.

12

- Apply Huffman coding procedure for the following message ensemble. Calculate the efficiency. Also find redundancy. Take $M = 2$.

$$[X] = [X_1 \quad X_2 \quad X_3 \quad X_4 \quad X_5 \quad X_6 \quad X_7]$$

$$[P] = [0.4 \quad 0.2 \quad 0.12 \quad 0.08 \quad 0.08 \quad 0.08 \quad 0.04]$$

- Find the mutual information and channel capacity of the channel shown in fig below.

Given $p(x_1)=0.6$ and $p(x_2)=0.4$

- Derive the expression of PCM bandwidth.
 - 24 telephone channels, each band limited to 3.4 KHz, are to be time division multiplexed by using PCM. Calculate the bandwidth of the PCM system for 128 quantization levels and an 8 KHz sampling frequency.

Section – II

Q.4 Attempt any four questions. **16**

- a) Explain the operation of QPSK transmitter. What is the advantage of offset QPSK over non offset QPSK?
- b) Explain the operation of an integrate and dump receiver.
- c) Write a note on FFT based multicarrier system.
- d) Explain the operation of a carrier recovery system.
- e) Explain the operation of a syndrome decoder for a (n,k) block code.

Q.5 Attempt any two questions. **12**

- a) Explain the operation of M-ary PSK transmitter and Receiver. Also draw the phasor diagram and comment on the trade off between value of M and the noise performance.
- b) What is matched filter? Derive the expression for impulse response of matched filter and explain with the example.
- c) The error control code has the following Generator matrix.

$$G = \begin{bmatrix} 1 & 0 & 0 & 0 & 1 & 1 & 0 \\ 0 & 1 & 0 & 0 & 0 & 1 & 1 \\ 0 & 0 & 1 & 0 & 1 & 0 & 1 \\ 0 & 0 & 0 & 1 & 1 & 1 & 1 \end{bmatrix}$$

Determine.

- 1) All code words
- 2) Error detection and error correction capabilities.
- 3) Decode the received codeword [1 1 1 1 0 1 0]

Seat No.

Set **Q**

**T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
PRINCIPLES OF DIGITAL COMMUNICATION**

Day & Date: Monday, 09-12-2019
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.
2) Assume suitable data whenever necessary.
3) Figures to the right indicate full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) Which of the following is more vulnerable to noise?
 - a) Binary PSK
 - b) Quadrature PSK
 - c) 8-ary PSK
 - d) 16-ary PSK
- 2) QAM has _____.
 - a) Variation of phase only with four values of phases
 - b) Variation of amplitude only with four values of phases
 - c) Variation of phase as well as amplitude
 - d) None of these
- 3) For a BPSK scheme, the bit error probability is given by _____.
 - a) $\frac{1}{2} \operatorname{erfc} \sqrt{\frac{E_b}{2\eta_0}}$
 - b) $\frac{1}{2} \operatorname{erfc} \frac{1}{2} \sqrt{\frac{E_b}{2\eta_0}}$
 - c) $\frac{1}{2} \operatorname{erfc} \sqrt{\frac{E_b}{\eta_0}}$
 - d) $\frac{1}{2} \operatorname{erfc} \frac{1}{2} \sqrt{\frac{E_b}{\eta_0}}$
- 4) A rectangular pulse of duration T is applied to a filter matched to the input. The output of filter is _____.
 - a) Rectangular pulse of duration T
 - b) Rectangular pulse of duration 2T
 - c) Triangular pulse
 - d) Sine function
- 5) Which of the following operations is not performed in a Multicarrier communication transmitter?
 - a) Add Cyclic prefix
 - b) Serial to parallel convert
 - c) Fast Fourier Transform
 - d) Autocorrelation
- 6) The minimum distance of a block code is defined as the _____.
 - a) the number of bits in which two successive code words differ
 - b) the smallest hamming distance between any pair of code words
 - c) the minimum weight of any of the code words
 - d) the distance which can detect and correct one bit error

- 7) A linear block code has following property _____.
- a) It is always systematic code
 - b) When two valid codewords are added, the resultant is also a valid codeword
 - c) It can detect one bit error and correct two bit errors
 - d) both a) and b) above
- 8) Which of the following is not a unit of information?
- a) Bit
 - b) Decit
 - c) Nat
 - d) Hz
- 9) The phase difference between two possible transmitted signals in BPSK is ____.
- a) Π
 - b) $\Pi/2$
 - c) $\Pi/4$
 - d) $\Pi/8$
- 10) According to Shannon's theorem the output from any source of rate R can be coded and transmitted over a channel of capacity C with the condition that _____.
- a) $C < R$
 - b) $C > R$
 - c) $C < R^2$
 - d) $C > R^2$
- 11) Frequency shift keying is used mostly in _____.
- a) Radio transmission
 - b) Telegraphy
 - c) Telephony
 - d) None of these
- 12) Companding is used in PCM to _____.
- a) Reduce bandwidth
 - b) Reduce power
 - c) Increase S/N ratio
 - d) Get almost uniform S/N ratio
- 13) Duo binary signaling makes use of _____.
- a) Two binary
 - b) A matched filter
 - c) Controlled ISI introduction
 - d) Correlation receiver
- 14) Equalizers are used for _____.
- a) Frame synchronization
 - b) Symbol synchronization
 - c) Carrier synchronization
 - d) Minimizing ISI

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) State-Transition diagram is _____.
 a) Stimulus-response model b) Data-flow model
 c) Architectural model d) Composition model
- 2) The goals of software testing leads to _____.
 a) Defect testing b) Violation testing
 c) Both 'a' and 'b' d) None
- 3) Release testing is also known as _____.
 a) Functional testing b) Regression testing
 c) Alfa testing d) None
- 4) Activity planning starts from _____.
 a) State 0 b) Selection of project
 c) Stage 1 d) Both a and b
- 5) Advantages of CBSE _____.
 a) Reduced software cost b) Faster delivery
 c) Reduced risk d) All
- 6) Which of the below is risk identification approach?
 a) Network analysis b) Forward tracking
 c) Checklist d) All
- 7) Testing helps us to _____ of product by finding defects in product.
 a) Fix defect b) Improve quality
 c) Measure quality d) All of the above
- 8) Organizing step is about _____.
 a) Group activities b) Distinguishing of activities
 c) Identifying of activities d) All
- 9) Functional requirement specification of a system should be _____.
 a) Complete b) Consistent
 c) Both a) and b) d) None of these
- 10) _____ provides a more striking visual indication of those activities that are not progressing to schedule.
 a) Slip chart b) Time line
 c) Gantt chart d) Ball chart

- 11) What are the different types of risk may occur when you develop software?
- a) Project risks
 - b) Technical risks
 - c) Business risks
 - d) All of the above
- 12) Risk exposure for each risk can be estimated as Risk Exposure = _____ * probability of occurrence.
- a) Potential damage
 - b) Cost of risk reduction
 - c) Risk reduction leverage
 - d) Risk avoidance
- 13) The Gantt chart is used for _____.
- a) Tracking project progress
 - b) Knowing the activities
 - c) Knowing starting date of project
 - d) Knowing end date of project
- 14) The base line budget is based on _____.
- a) Activity network
 - b) Cost monitoring
 - c) Proposed plan
 - d) None

T.E. (Part - I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
SOFTWARE ENGINEERING & PROJECT MANAGEMENT SYSTEM

Day & Date: Wednesday, 11-12-2019

Max. Marks: 56

Time: 02:30 PM To 05:30 PM

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicate full marks.

Section – I

- Q.2 Solve any Three. 12**
- a) Explain test automation with testing workbench.
 - b) Write note on object aggregation.
 - c) Write in briefly the inheritance model.
 - d) List and explain characteristics of software process.
- Q.3 Solve any Two. 16**
- a) System requirement has IEEE standard. Explain standard suggestions for requirement document.
 - b) List system models and explain any one of them.
 - c) Explain release testing in detail.

Section – II

- Q.4 Solve any Three. 12**
- a) Explain categories of risk.
 - b) Describe forward pass for activity planning.
 - c) What is project? What are different activities of management?
 - d) Explain slip chart as tracking of project progress.
- Q.5 Solve any Two. 16**
- a) Write step wise project planning activates.
 - b) With suitable example explain Monte Carlo simulation and critical chain concepts.
 - c) What are different methods to visualize the progress of a project?

Seat No.

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.
 2) Figures to the right indicate full marks.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) Advantages of CBSE _____.
 - a) Reduced software cost
 - b) Faster delivery
 - c) Reduced risk
 - d) All
- 2) Which of the below is risk identification approach?
 - a) Network analysis
 - b) Forward tracking
 - c) Checklist
 - d) All
- 3) Testing helps us to _____ of product by finding defects in product.
 - a) Fix defect
 - b) Improve quality
 - c) Measure quality
 - d) All of the above
- 4) Organizing step is about _____.
 - a) Group activities
 - b) Distinguishing of activities
 - c) Identifying of activities
 - d) All
- 5) Functional requirement specification of a system should be _____.
 - a) Complete
 - b) Consistent
 - c) Both a) and b)

- 9) The frequency response of rectangular window is _____.
- a) $\frac{\sin \omega N/2}{\sin \omega/2}$ b) $\frac{\sin \omega/2}{\sin \omega N/2}$
- c) $\frac{\sin \omega N/2}{\omega/2}$ d) $\frac{\sin \omega N/2}{N\omega/2}$
- 10) The relation between Laplace transform and z-transform is _____.
- a) $z = e^{st}$ b) $z = e^{jst}$
- c) $s = e^{zt}$ d) $z = e^{-st}$
- 11) The Impulse response of FIR system has a linear phase linear characteristics _____.
- a) $\theta(\omega) = \alpha\omega$ b) $\theta(\omega) = -\frac{\partial\theta}{\partial\omega}$
- c) $\theta(\omega) = -\alpha\omega$ d) none of above
- 12) The main lobe width of rectangular window is _____.
- a) $\frac{\pi}{N}$ b) $\frac{2\pi}{N}$
- c) $\frac{4\pi}{N}$ d) $\frac{8\pi}{N}$
- 13) The Number of multiplications in FIR system can be reduced using _____.
- a) Finite Impulse Response
- b) Infinite Impulse Response
- c) Symmetric nature of Impulse Response
- d) None of above
- 14) To meet the magnitude response specification for a transition width, one has to _____.
- a) Select Proper Window b) To Select Kaiser Window
- c) Select Filter Order d) Select Rectangular Window

T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
DIGITAL SIGNAL PROCESSING

Day & Date: Friday, 13-12-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicate full marks.
 3) Assume necessary data if necessary.

Section – I

- Q.2 Attempt any Four.** **16**
- Explain the sampling in frequency domain.
 - Compute the Auto correlation of given sequence $x(n) = \{1,3,3,4,5\}$.
 - Derive the relation between DFT and Z transform.
 - Find IDFT of Sequence using DIF-FFT Algorithm $X(k) = \{11, -2 - 3i, -3, -2 + 3i\}$
 - Describe briefly the Goertzel algorithm.
 - Compute Circular convolution.
 $x_1(n) = \{1,3,2,5,4\}$
 $x_2(n) = \{4,5,2,3,1\}$

- Q.3 Attempt any two.** **12**
- Given $x(n) = 2^n$ and $N=8$, Find $X(k)$ using DIF-FFT algorithm.
 - Perform linear convolution of finite duration sequences $h(n) = \{1,1,2,1\}$ and $x(n) = \{1,-1,1,2,1,0,1,-4,3,2,1,0,1,1\}$ using overlap save method?
 - Compute the circular convolution of the following sequence $x(n) = \{3,4,5,2\}$ and $h(n) = \{3,1,4,2\}$ Using DFT and IDFT method.

Section – II

- Q.4 Attempt Any Four.** **16**
- Explain in detail FIR filter design using frequency sampling technique.
 - Explain the finite word length effect in IIR Filter.
 - What is warping effect? What is its effect on magnitude and phase response?
 - Obtain the Direct Form I, II form realization for the system.
 $y(n) = -0.1y(n-1) + 0.2y(n-2) + 3x(n) + 3.6x(n-1) + 0.6x(n-2)$
 - For given specification find the order of analog Butterworth filter.
 $0.8 \leq |H(j\Omega)| \leq 1$ for $0 \leq \Omega \leq 0.2\pi$
 $|H(j\Omega)| \leq 0.2$ for $0.6\pi \leq \Omega \leq \pi$
 - Compare Rectangular and Triangular windows.

- Q.5 Attempt Any Two.** **12**
- Design an FIR Filter approximating the ideal frequency response.

$$H_d(e^{j\omega}) = e^{-j5\omega} \quad \text{for } -\pi/2 \leq \omega \leq \pi/2$$

$$= 0 \quad \text{for } \pi/2 < |\omega| \leq \pi$$

Using Blackman window with $N=11$

- b)** Using Impulse invariance with $T=1$ Sec determine $H(Z)$ if.

$$H(s) = \frac{1}{s^2 + \sqrt{2}s + 1}$$

- c)** Design a digital Butterworth filter satisfying the constraints.

$$0.707 \leq |H(e^{j\omega})| \leq 1 \quad \text{for} \quad 0 \leq \omega \leq \pi/2$$

$$|H(e^{j\omega})| \leq 0.2 \quad \text{for} \quad 3\pi/4 \leq \omega \leq \pi$$

with $T=1$ Sec using Bilinear Transformation

 2) Figures to the right indicate full marks.
 3) Assume necessary data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) When analog butter worth filter is converted to DT filter using Impulse Invariance Method, then _____.
 - a) Aliasing can be eliminated
 - b) Aliasing is always present
 - c) Aliasing can be reduced by reducing T
 - d) Aliasing cannot be reduced by reducing T

- 2) The frequency response of rectangular window is _____.

<ol style="list-style-type: none"> a) $\frac{\sin \omega N/2}{\sin \omega/2}$ c) $\frac{\sin \omega N/2}{\omega/2}$ 	<ol style="list-style-type: none"> b) $\frac{\sin \omega/2}{\sin \omega N/2}$ d) $\frac{\sin \omega N/2}{N\omega/2}$
---	--

- 3) The relation between Laplace transform and z-transform is _____.

<ol style="list-style-type: none"> a) $z = e^{st}$ c) $s = e^{zt}$ 	<ol style="list-style-type: none"> b) $z = e^{jst}$ d) $z = e^{-st}$
--	--

- 4) The Impulse response of FIR system has a linear phase linear characteristics _____.

<ol style="list-style-type: none"> a) $\theta(\omega) = \alpha\omega$ c) $\theta(\omega) = -\alpha\omega$ 	<ol style="list-style-type: none"> b) $\theta(\omega) = -\frac{\partial\theta}{\partial\omega}$ d) none of above
---	---

- 5) The main lobe width of rectangular window is _____.

<ol style="list-style-type: none"> a) $\frac{\pi}{N}$ c) $\frac{4\pi}{N}$ 	<ol style="list-style-type: none"> b) $\frac{2\pi}{N}$ d) $\frac{8\pi}{N}$
---	--

- 6) The Number of multiplications in FIR system can be reduced using _____.
 - a) Finite Impulse Response
 - b) Infinite Impulse Response
 - c) Symmetric nature of Impulse Response
 - d) None of above

- 7) To meet the magnitude response specification for a transition width, one has to _____.
- a) Select Proper Window b) To Select Kaiser Window
c) Select Filter Order d) Select Rectangular Window
- 8) The 4-point DFT of $\{1,1,0,0\}$ _____.
- a) $\{2,0,2,0\}$ b) $\{2,1+2j, -2, 1-2j\}$
c) $\{0,4,0,0\}$ d) $\{2,1-j,0,1+j\}$
- 9) FFT algorithm calculates _____.
- a) DTFT b) DCT
c) DFT d) DST
- 10) If DFT of a sequence $x(n)$ is $X(k)$ then the DFT of $x(n)e^{-j2\pi ln/2}$ is _____.
- a) $X((k-l))_N$ b) $X((k+l))_N$
c) $e^{-j2\pi l} X(k)$ d) $e^{j2\pi l} X(k)$
- 11) The DFT of the sequence $x(n) = \delta(n - n_0)$ is _____.
- a) 1 b) $e^{j2\pi k n_0}$
c) $e^{-j2\pi k n_0/N}$ d) $e^{j2\pi k n_0/N}$
- 12) The number of multiplications required for performing the convolution of two sequences with identical length 8 using the indirect method using FFT is _____.
- a) 256 b) 120
c) 192 d) 64
- 13) Circular time shift of a sequence is equivalent to _____.
- a) Multiplication of the sequence $x(n)$ with complex exponential
b) Multiplication of the sequence $X(k)$ with complex exponential
c) Multiplication of the sequence $x(n)$ with exponential factor
d) None
- 14) Unwrapped phase response of FIR filter in pass band is _____.
- a) Exponentially increasing b) Exponentially decreasing
c) Non-linear d) linear

T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
DIGITAL SIGNAL PROCESSING

Day & Date: Friday, 13-12-2019

Max. Marks: 56

Time: 02:30 PM To 05:30 PM

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicate full marks.
 3) Assume necessary data if necessary.

Section – I

Q.2 Attempt any Four. **16**

- Explain the sampling in frequency domain.
- Compute the Auto correlation of given sequence $x(n) = \{1,3,3,4,5\}$.
- Derive the relation between DFT and Z transform.
- Find IDFT of Sequence using DIF-FFT Algorithm $X(k) = \{11, -2 - 3i, -3, -2 + 3i\}$
- Describe briefly the Goertzel algorithm.
- Compute Circular convolution.
 $x_1(n) = \{1,3,2,5,4\}$
 $x_2(n) = \{4,5,2,3,1\}$

Q.3 Attempt any two. **12**

- Given $x(n) = 2^n$ and $N=8$, Find $X(k)$ using DIF-FFT algorithm.
- Perform linear convolution of finite duration sequences $h(n) = \{1,1,2,1\}$ and $x(n) = \{1,-1,1,2,1,0,1,-4,3,2,1,0,1,1\}$ using overlap save method?
- Compute the circular convolution of the following sequence $x(n) = \{3,4,5,2\}$ and $h(n) = \{3,1,4,2\}$ Using DFT and IDFT method.

Section – II

Q.4 Attempt Any Four. **16**

- Explain in detail FIR filter design using frequency sampling technique.
- Explain the finite word length effect in IIR Filter.
- What is warping effect? What is its effect on magnitude and phase response?
- Obtain the Direct Form I, II form realization for the system.
 $y(n) = -0.1y(n-1) + 0.2y(n-2) + 3x(n) + 3.6x(n-1) + 0.6x(n-2)$
- For given specification find the order of analog Butterworth filter.
 $0.8 \leq |H(j\Omega)| \leq 1$ for $0 \leq \Omega \leq 0.2\pi$
 $|H(j\Omega)| \leq 0.2$ for $0.6\pi \leq \Omega \leq \pi$
- Compare Rectangular and Triangular windows.

Q.5 Attempt Any Two. **12**

- Design an FIR Filter approximating the ideal frequency response.

$$H_d(e^{j\omega}) = e^{-j5\omega} \quad \text{for } -\pi/2 \leq \omega \leq \pi/2$$

$$= 0 \quad \text{for } \pi/2 < \omega \leq \pi$$

Using Blackman window with N=11

- b) Using Impulse invariance with $T=1$ Sec determine $H(Z)$ if.

$$H(s) = \frac{1}{s^2 + \sqrt{2}s + 1}$$

- c) Design a digital Butterworth filter satisfying the constraints.

$$0.707 \leq |H(e^{j\omega})| \leq 1 \quad \text{for} \quad 0 \leq \omega \leq \pi/2$$

$$|H(e^{j\omega})| \leq 0.2 \quad \text{for} \quad 3\pi/4 \leq \omega \leq \pi$$

with $T=1$ Sec using Bilinear Transformation

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14

- 1) The number of multiplications required for performing the convolution of two sequences with identical length 8 using the indirect method using FFT is _____.
 a) 256 b) 120
 c) 192 d) 64
- 2) Circular time shift of a sequence is equivalent to _____.
 a) Multiplication of the sequence $x(n)$ with complex exponential
 b) Multiplication of the sequence $X(k)$ with complex exponential
 c) Multiplication of the sequence $x(n)$ with exponential factor
 d) None
- 3) Unwrapped phase response of FIR filter in pass band is _____.
 a) Exponentially increasing b) Exponentially decreasing
 c) Non-linear d) Linear
- 4) When analog butter worth filter is converted to DT filter using Impulse Invariance Method, then _____.
 a) Aliasing can be eliminated
 b) Aliasing is always present
 c) Aliasing can be reduced by reducing T
 d) Aliasing cannot be reduced by reducing T
- 5) The frequency response of rectangular window is _____.
 a) $\frac{\sin \omega N/2}{\sin \omega/2}$ b) $\frac{\sin \omega/2}{\sin \omega N/2}$
 c) $\frac{\sin \omega N/2}{\omega/2}$ d) $\frac{\sin \omega N/2}{N\omega/2}$
- 6) The relation between Laplace transform and z-transform is _____.
 a) $z = e^{st}$ b) $z = e^{jst}$
 c) $s = e^{zt}$ d) $z = e^{-st}$

- 7) The Impulse response of FIR system has a linear phase linear characteristics _____.
- | | |
|-------------------------------------|--|
| a) $\theta(\omega) = \alpha\omega$ | b) $\theta(\omega) = -\frac{\partial\theta}{\partial\omega}$ |
| c) $\theta(\omega) = -\alpha\omega$ | d) none of above |
- 8) The main lobe width of rectangular window is _____.
- | | |
|---------------------|---------------------|
| a) $\frac{\pi}{N}$ | b) $\frac{2\pi}{N}$ |
| c) $\frac{4\pi}{N}$ | d) $\frac{8\pi}{N}$ |
- 9) The Number of multiplications in FIR system can be reduced using _____.
- | | |
|---|------------------------------|
| a) Finite Impulse Response | b) Infinite Impulse Response |
| c) Symmetric nature of Impulse Response | d) None of above |
- 10) To meet the magnitude response specification for a transition width, one has to _____.
- | | |
|-------------------------|------------------------------|
| a) Select Proper Window | b) To Select Kaiser Window |
| c) Select Filter Order | d) Select Rectangular Window |
- 11) The 4-point DFT of $\{1,1,0,0\}$ _____.
- | | |
|------------------|---------------------------|
| a) $\{2,0,2,0\}$ | b) $\{2,1+2j, -2, 1-2j\}$ |
| c) $\{0,4,0,0\}$ | d) $\{2,1-j,0,1+j\}$ |
- 12) FFT algorithm calculates _____.
- | | |
|---------|--------|
| a) DTFT | b) DCT |
| c) DFT | d) DST |
- 13) If DFT of a sequence $x(n)$ is $X(k)$ then the DFT of $x(n)e^{-j2\pi ln/2}$ is _____.
- | | |
|------------------------|-----------------------|
| a) $X((k-l))_N$ | b) $X((k+l))_N$ |
| c) $e^{-j2\pi l} X(k)$ | d) $e^{j2\pi l} X(k)$ |
- 14) The DFT of the sequence $x(n) = \delta(n - n_0)$ is _____.
- | | |
|------------------------|-----------------------|
| a) 1 | b) $e^{j2\pi kn_0}$ |
| c) $e^{-j2\pi kn_0/N}$ | d) $e^{j2\pi kn_0/N}$ |

T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
DIGITAL SIGNAL PROCESSING

Day & Date: Friday, 13-12-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicate full marks.
 3) Assume necessary data if necessary.

Section – I

- Q.2 Attempt any Four.** **16**
- Explain the sampling in frequency domain.
 - Compute the Auto correlation of given sequence $x(n) = \{1,3,3,4,5\}$.
 - Derive the relation between DFT and Z transform.
 - Find IDFT of Sequence using DIF-FFT Algorithm $X(k) = \{11, -2 - 3i, -3, -2 + 3i\}$
 - Describe briefly the Goertzel algorithm.
 - Compute Circular convolution.
 $x_1(n) = \{1,3,2,5,4\}$
 $x_2(n) = \{4,5,2,3,1\}$

- Q.3 Attempt any two.** **12**
- Given $x(n) = 2^n$ and $N=8$, Find $X(k)$ using DIF-FFT algorithm.
 - Perform linear convolution of finite duration sequences $h(n) = \{1,1,2,1\}$ and $x(n) = \{1,-1,1,2,1,0,1,-4,3,2,1,0,1,1\}$ using overlap save method?
 - Compute the circular convolution of the following sequence $x(n) = \{3,4,5,2\}$ and $h(n) = \{3,1,4,2\}$ Using DFT and IDFT method.

Section – II

- Q.4 Attempt Any Four.** **16**
- Explain in detail FIR filter design using frequency sampling technique.
 - Explain the finite word length effect in IIR Filter.
 - What is warping effect? What is its effect on magnitude and phase response?
 - Obtain the Direct Form I, II form realization for the system.
 $y(n) = -0.1y(n-1) + 0.2y(n-2) + 3x(n) + 3.6x(n-1) + 0.6x(n-2)$
 - For given specification find the order of analog Butterworth filter.
 $0.8 \leq |H(j\Omega)| \leq 1$ for $0 \leq \Omega \leq 0.2\pi$
 $|H(j\Omega)| \leq 0.2$ for $0.6\pi \leq \Omega \leq \pi$
 - Compare Rectangular and Triangular windows.

- Q.5 Attempt Any Two.** **12**
- Design an FIR Filter approximating the ideal frequency response.

$$H_d(e^{j\omega}) = e^{-j5\omega} \quad \text{for } -\pi/2 \leq \omega \leq \pi/2$$

$$= 0 \quad \text{for } \pi/2 < |\omega| \leq \pi$$

Using Blackman window with N-11

- b) Using Impulse invariance with $T=1$ Sec determine $H(Z)$ if.

$$H(s) = \frac{1}{s^2 + \sqrt{2}s + 1}$$

- c) Design a digital Butterworth filter satisfying the constraints.

$$0.707 \leq |H(e^{j\omega})| \leq 1 \quad \text{for} \quad 0 \leq \omega \leq \pi/2$$

$$|H(e^{j\omega})| \leq 0.2 \quad \text{for} \quad 3\pi/4 \leq \omega \leq \pi$$

with $T=1$ Sec using Bilinear Transformation

T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
MICROCONTROLLER – I

Day & Date: Monday, 16-12-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer Book.
 2) Figures to the right indicate full marks.
 3) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options.

14

- 1) Serial port interrupt is generated, if _____ bits are set.
 - a) IE
 - b) RI, IE
 - c) IP, TI
 - d) RI, TI
- 2) SP of 8051 is of _____ wide and it is loaded with the default value of _____ after reset.
 - a) 2 byte, 08H
 - b) 8 bit, 07H
 - c) 1 byte, 09H
 - d) 8 bit, 06H
- 3) ACALL instruction allows specifying _____ address in the instruction and calling subroutine within _____ program memory block.
 - a) 2byte, 3K
 - b) 11bit, 2K
 - c) 9bit, 2K
 - d) 1byte, 3K
- 4) Which of the following instruction perform the move accumulator to external RAM of 16bit address?
 - a) MOV @ DPTR, A
 - b) MOVX @ Ri, A
 - c) MOV A, @ Ri
 - d) MOVX @ DPTR, A
- 5) In 8051 which interrupt has highest priority?
 - a) IE1
 - b) TF0
 - c) IE0
 - d) TF1
- 6) The bit address range for the byte address 25H is _____.
 - a) 00-07H
 - b) 28-2Fh
 - c) 20-27H
 - d) 30-37H
- 7) In 8 bit signed no. operations, OV is set to 1 if _____.
 - a) carry is generated from D7 bit
 - b) carry is generated from D3 bit
 - c) carry is generated from D7 xor D3 bit
 - d) carry is generated from D7 xor D6 bit
- 8) To address a memory location out of N memory locations, the number of address lines required is _____.
 - a) log N (to the base 2)
 - b) log N (to the base 10)
 - c) log N (to the base e)
 - d) log (2N) (to the base e)

- 9) Which ports assist in addressing lower order and higher address bytes into the data bus simultaneously, while accessing the external data memory?
- a) Port 0 & Port 1 respectively b) Port 1 & Port 2 respectively
c) Port 0 & Port 2 respectively d) Port 2 & Port 3 respectively
- 10) How does the microcontroller communicate with the external peripherals/memory?
- a) via I/O ports b) via register arrays
c) via memory d) all of the above
- 11) How many data lines are essential in addition to RS, EN and RW control lines for interfacing LCD with Atmel 89C51 microcontroller?
- a) 3 b) 5
c) 8 d) 10
- 12) Which control signal/s is/are generated by timing and control unit of 8051 microcontroller in order to access the off-chip devices apart from the internal timings?
- a) ALE b) PSEN
c) RD and WR d) All of the above
- 13) Which of the following statements is true?
- a) In Simplex mode of serial communication, data is transmitted both from the transmitter to the receiver, as well as from the receiver to the transmitter.
b) In Half Duplex mode of serial communication, data is transmitted only from the transmitter to the receiver.
c) In Full Duplex mode of serial communication, data is exchanged between the transmitter and the receiver using two different channels.
d) None of the options mentioned
- 14) How many times the instruction CPL A is executed in the following program of an 8051?

```
MOV A, #F0H
MOV R1, #60
NEXT: MOV R6, #10H
AGAIN: CPL A
```

```
DJNZ R6, AGAIN
DJNZ R1, NEXT
```

- a) 600 times b) 900 times
c) 690 times d) 960 times

P

T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
MICROCONTROLLER – I

Day & Date: Monday, 16-12-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.
 2) Figures to the right indicate full marks.

Section – I

- Q.2 Attempt any four.** **16**
- a) Give comparison CISC and RISC.
 - b) With one example explain SJMP, AJMP and LJMP instructions. Specify the range for each instruction.
 - c) Explain How interrupts are handled by 8051 Microcontroller.
 - d) Assuming SMOD=0 and Fc=11.0592MHz, Calculate Value to be loaded in TH1 register for generating the baud rate of 9600, 4800, 2400 and 1200.
 - e) Explain the data memory organization of 8051 Microcontroller.
- Q.3 Attempt any two** **12**
- a) Write assembly language program to copy a block of 10 bytes of data from 35H to 60H.
 - b) Draw and explain detail architecture of 8051.
 - c) Discuss and compare Timer Mode 1 and Mode2 of 8051.

Section – II

- Q.4 Solve any four of the following.** **16**
- a) A switch is connected to pin P1.7. Write assembly Language program to check the status of SW and perform the following:
 - 1) If SW=0, send letter 'N' to P2.
 - 2) If SW=1, send letter 'Y' to P2
 Use the carry flag to check the switch status.
 - b) Write a program for blinking LED connected to P2.0
 - c) How DAC 0808 can be interfaced to 8051 Microcontroller. Write a Program for generating rising ramp signal.
 - d) Write an 8051 program to transfer the message "SUS" serially at 9600 baud, 8-bit data, 1 stop bit. Do this continuously.
 - e) How we can design obstruction detecting circuit using 8051 Microcontroller?
 - f) Assume that XTAL = 11.0592 MHz. What value do we need to load the timer's register if we want to have a time delay of 5 ms (milliseconds)? Show the program for timer 0 to create a pulse width of 5 ms on P2.3.
- Q.5 Solve any two of the following** **12**
- a) A door sensor is connected to the P1.1pin, and a buzzer is connected to P1.7. Write an 8051 C program to monitor the door sensor, and when it opens, sound the buzzer. You can sound the buzzer by sending a square wave of a five hundred Hz.
 - b) Show the design of an 8051-based system with 8K bytes of program ROM and 16K bytes of data RAM.
 - c) Draw and Explain interfacing of Matrix keyboard (4X4) to microcontroller.

Seat No.

 2) Figures to the right indicate full marks.

Section – I

- Q.2 Attempt any four.** **16**
- Give comparison CISC and RISC.
 - With one example explain SJMP, AJMP and LJMP instructions. Specify the range for each instruction.
 - Explain How interrupts are handled by 8051 Microcontroller.
 - Assuming SMOD=0 and Fc=11.0592MHz, Calculate Value to be loaded in TH1 register for generating the baud rate of 9600, 4800, 2400 and 1200.
 - Explain the data memory organization of 8051 Microcontroller.
- Q.3 Attempt any two** **12**
- Write assembly language program to copy a block of 10 bytes of data from 35H to 60H.
 - Draw and explain detail architecture of 8051.
 - Discuss and compare Timer Mode 1 and Mode2 of 8051.

Section – II

- Q.4 Solve any four of the following.** **16**
- A switch is connected to pin P1.7. Write assembly Language program to check the status of SW and perform the following:
 - If SW=0, send letter 'N' to P2.
 - If SW=1, send letter 'Y' to P2
 Use the carry flag to check the switch status.
 - Write a program for blinking LED connected to P2.0
 - How DAC 0808 can be interfaced to 8051 Microcontroller. Write a Program for generating rising ramp signal.
 - Write an 8051 program to transfer the message "SUS" serially at 9600 baud, 8-bit data, 1 stop bit. Do this continuously.
 - How we can design obstruction detecting circuit using 8051 Microcontroller?
 - Assume that XTAL = 11.0592 MHz. What value do we need to load the timer's register if we want to have a time delay of 5 ms (milliseconds)? Show the program for timer 0 to create a pulse width of 5 ms on P2.3.
- Q.5 Solve any two of the following** **12**
- A door sensor is connected to the P1.1pin, and a buzzer is connected to P1.7. Write an 8051 C program to monitor the door sensor, and when it opens, sound the buzzer. You can sound the buzzer by sending a square wave of a five hundred Hz.
 - Show the design of an 8051-based system with 8K bytes of program ROM and 16K bytes of data RAM.
 - Draw and Explain interfacing of Matrix keyboard (4X4) to microcontroller.

T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019
Electronics & Telecommunication Engineering
MICROCONTROLLER – I

Day & Date: Monday, 16-12-2019
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer Book.
 2) Figures to the right indicate full marks.
 3) Assume suitable data if necessary.

MCQ/Objective Type Questions

Duration: 30 Minutes

Marks: 14

Q.1 Choose the correct alternatives from the options.

14

- 1) How does the microcontroller communicate with the external peripherals/memory?
 - a) via I/O ports
 - b) via register arrays
 - c) via memory
 - d) all of the above
- 2) How many data lines are essential in addition to RS, EN and RW control lines for interfacing LCD with Atmel 89C51 microcontroller?
 - a) 3
 - b) 5
 - c) 8
 - d) 10
- 3) Which control signal/s is/are generated by timing and control unit of 8051 microcontroller in order to access the off-chip devices apart from the internal timings?
 - a) ALE
 - b) PSEN
 - c) RD and WR
 - d) All of the above
- 4) Which of the following statements is true?
 - a) In Simplex mode of serial communication, data is transmitted both from the transmitter to the receiver, as well as from the receiver to the transmitter.
 - b) In Half Duplex mode of serial communication, data is transmitted only from the transmitter to the receiver.
 - c) In Full Duplex mode of serial communication, data is exchanged between the transmitter and the receiver using two different channels.
 - d) None of the options mentioned

- 5) How many times the instruction CPL A is executed in the following program of an 8051?
- ```
MOV A, #F0H
MOV R1, #60
NEXT: MOV R6, #10H
AGAIN: CPL A

 DJNZ R6, AGAIN
 DJNZ R1, NEXT
```
- a) 600 times                                    b) 900 times  
c) 690 times                                    d) 960 times
- 6) Serial port interrupt is generated, if \_\_\_\_\_ bits are set.  
a) IE                                              b) RI, IE  
c) IP, TI                                         d) RI, TI
- 7) SP of 8051 is of \_\_\_\_\_ wide and it is loaded with the default value of \_\_\_\_\_ after reset.  
a) 2 byte, 08H                                   b) 8 bit, 07H  
c) 1 byte, 09H                                   d) 8 bit, 06H
- 8) ACALL instruction allows specifying \_\_\_\_\_ address in the instruction and calling subroutine within \_\_\_\_\_ program memory block.  
a) 2byte, 3K                                     b) 11bit, 2K  
c) 9bit, 2K                                      d) 1byte, 3K
- 9) Which of the following instruction perform the move accumulator to external RAM of 16bit address?  
a) MOV @ DPTR, A                              b) MOVX @ Ri, A  
c) MOV A, @ Ri                                    d) MOVX @ DPTR, A
- 10) In 8051 which interrupt has highest priority?  
a) IE1                                              b) TF0  
c) IE0                                              d) TF1
- 11) The bit address range for the byte address 25H is \_\_\_\_\_.  
a) 00-07H                                        b) 28-2Fh  
c) 20-27H                                        d) 30-37H
- 12) In 8 bit signed no. operations, OV is set to 1 if \_\_\_\_\_.  
a) carry is generated from D7 bit  
b) carry is generated from D3 bit  
c) carry is generated from D7 xor D3 bit  
d) carry is generated from D7 xor D6 bit
- 13) To address a memory location out of N memory locations, the number of address lines required is \_\_\_\_\_.  
a)  $\log N$  (to the base 2)                      b)  $\log N$  (to the base 10)  
c)  $\log N$  (to the base e)                        d)  $\log(2N)$  (to the base e)
- 14) Which ports assist in addressing lower order and higher address bytes into the data bus simultaneously, while accessing the external data memory?  
a) Port 0 & Port 1 respectively              b) Port 1 & Port 2 respectively  
c) Port 0 & Port 2 respectively              d) Port 2 & Port 3 respectively

**T.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**MICROCONTROLLER – I**

Day & Date: Monday, 16-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

**Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**Section – I**

**Q.2 Attempt any four.** **16**

- a) Give comparison CISC and RISC.
- b) With one example explain SJMP, AJMP and LJMP instructions. Specify the range for each instruction.
- c) Explain How interrupts are handled by 8051 Microcontroller.
- d) Assuming SMOD=0 and Fc=11.0592MHz, Calculate Value to be loaded in TH1 register for generating the baud rate of 9600, 4800, 2400 and 1200.
- e) Explain the data memory organization of 8051 Microcontroller.

**Q.3 Attempt any two** **12**

- a) Write assembly language program to copy a block of 10 bytes of data from 35H to 60H.
- b) Draw and explain detail architecture of 8051.
- c) Discuss and compare Timer Mode 1 and Mode2 of 8051.

**Section – II**

**Q.4 Solve any four of the following.** **16**

- a) A switch is connected to pin P1.7. Write assembly Language program to check the status of SW and perform the following:
  - 1) If SW=0, send letter 'N' to P2.
  - 2) If SW=1, send letter 'Y' to P2
 Use the carry flag to check the switch status.
- b) Write a program for blinking LED connected to P2.0
- c) How DAC 0808 can be interfaced to 8051 Microcontroller. Write a Program for generating rising ramp signal.
- d) Write an 8051 program to transfer the message "SUS" serially at 9600 baud, 8-bit data, 1 stop bit. Do this continuously.
- e) How we can design obstruction detecting circuit using 8051 Microcontroller?
- f) Assume that XTAL = 11.0592 MHz. What value do we need to load the timer's register if we want to have a time delay of 5 ms (milliseconds)? Show the program for timer 0 to create a pulse width of 5 ms on P2.3.

**Q.5 Solve any two of the following** **12**

- a) A door sensor is connected to the P1.1 pin, and a buzzer is connected to P1.7. Write an 8051 C program to monitor the door sensor, and when it opens, sound the buzzer. You can sound the buzzer by sending a square wave of a five hundred Hz.
- b) Show the design of an 8051-based system with 8K bytes of program ROM and 16K bytes of data RAM.
- c) Draw and Explain interfacing of Matrix keyboard (4X4) to microcontroller.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Attempt all questions.****14**

- 1) H-plane Tee is called \_\_\_\_\_.
  - a) Current divider
  - b) Power device
  - c) 3 dB splitter
  - d) Reciprocal device
- 2) In case of directional coupler amount of coupling is decided by \_\_\_\_\_.
  - a) Hole dimensions
  - b) Number of holes
  - c) Both A & B
  - d) None of these
- 3) In case of Matched load \_\_\_\_\_.
  - a) Transmission is zero
  - b) Reflection is zero
  - c) Reflection is unity
  - d) Transmission is equal to reflection
- 4) PIN diode is \_\_\_\_\_ type solid state device.
  - a) Controllable impedance
  - b) Negative resistance
  - c) Non-linear reactance
  - d) Non-linear resistance
- 5) The Two -valley model is best suited to explain the working of \_\_\_\_\_.
  - a) IMPATT diode
  - b) TRAPATT diode
  - c) Gunn diode
  - d) PIN diode
- 6) The dominant mode in rectangular waveguide is \_\_\_\_\_.
  - a) TE<sub>10</sub>
  - b) TE<sub>11</sub>
  - c) TE<sub>01</sub>
  - d) TE<sub>12</sub>
- 7) A lossless Transmission line operating at 200 M rad/sec has  $L = 0.6 \mu\text{H}$ ,  $C = 10 \text{ pF/m}$ . Characteristic impedance of this transmission line is \_\_\_\_\_.
  - a) 244.94  $\Omega$
  - b) 376.7  $\Omega$
  - c) 173.20  $\Omega$
  - d) None of these
- 8) An accelerating dc voltage of 10 kV will result in an electron velocity of \_\_\_\_\_ m/sec.
  - a)  $5.93 \times 10^6$
  - b)  $59.3 \times 10^6$
  - c)  $0.593 \times 10^6$
  - d)  $5.93 \times 10^8$
- 9) In case of Magnetron frequency pulling takes place due to \_\_\_\_\_ variations.
  - a) Supply
  - b) Load
  - c) Frequency
  - d) Amplitude

- 10) In case of Radar, the frequency of echo signal \_\_\_\_\_ if the target is approaching the radar station.
- a) Remains constant
  - b) Increases
  - c) Decreases
  - d) None of these
- 11) \_\_\_\_\_ type radar cannot determine range of the moving target.
- a) Pulsed radar
  - b) Modulated CW radar
  - c) Unmodulated CW radar
  - d) None of these
- 12) The power in the range of kilo Watts can be measured by \_\_\_\_\_ technique.
- a) Balometer
  - b) Thermister
  - c) Calorimetric
  - d) Calorimetric wattmeter
- 13) The average power depends on the transmitter power  $P_t$  and the duty cycle given by \_\_\_\_\_.
- a)  $P_{avg} = P_t \cdot \text{duty cycle}$
  - b)  $P_{avg} = P_t \cdot \text{pulse width} \cdot \text{prf}$
  - c) both of the above
  - d) None of these
- 14) Accurate Measurement of attenuation can be done by \_\_\_\_\_ method.
- a) Power Ratio
  - b) RF substitution
  - c) using magic Tee
  - d) Using slotted line

**Electronics & Telecommunication Engineering**  
**RADAR & MICROWAVE ENGINEERING**

Day & Date: Friday, 22-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Assume suitable data if required.

**Section – I**

**Q.2 Attempt any Three** **12**

- a) Explain working of two hole Directional Coupler.
- b) A lossless  $100 \Omega$  transmission line terminated in  $200 + j 200 \Omega$ .  
 Find:
  - 1) voltage reflection coefficient
  - 2) Transmission coefficient
  - 3) VSWR
- c) What is PIN diode? Explain any two applications of PIN diode.
- d) IMPATT diode has following parameters  $V_d = 2 \times 10^7$  cm/s,  $L = 6 \mu\text{m}$ ,  $V_0 = 100$  V,  $I_0 = 200$  mA. Find maximum continuous wave output power and frequency of operation if efficiency is 15%.

**Q.3 Attempt any Two.** **16**

- a) Derive S matrix for E plane tee. Justify the statement "E plane tee acts as a 3 dB splitter".
- b) Write & Explain High frequency limitations of conventional tubes.
- c) Determine the cut-off wavelength for the dominant mode in a rectangular waveguide of breadth 10 cms. For 2.5 GHz signal propagated in this waveguide in the dominant mode calculate the guide wavelength in dominant mode, group and phase velocities.

**Section – II**

**Q.4 Attempt any Three.** **12**

- a) Reflex Klystron operated at 56 Hz with anode voltage 1000 V and cavity gap 2mm. Calculate gap transit angle. Assume  $1 \frac{3}{4}$  mode,  $V_R = -500$  V.
- b) Explain any one method for measurement of VSWR.
- c) Explain Gunn Effect using Two Valley Theory.
- d) Explain Radar Displays.

**Q.5 Attempt any Two.**

- a)** Derive Radar range equation.
- b)** Two cavity klystron amplifier has following parameters  
Anode to cathode voltage = 1200 V  
Beam current = 28 mA  
Frequency = 8 GHz  
Gap spacing in either cavity = 1 mm  
Spacing between two cavities = 4 cm  
Effective shunt impedance = 40 kohm (Excluding beam loading)  
Calculate:  
i) Electron velocity  
ii) Input gap voltage to give maximum voltage across input cavity  
iii) Efficiency of the amplifier neglecting beam loading  
iv) Voltage Gain in decibels
- c)** Explain any two methods for measurement of attenuation.

  - a)  $P_{avg} = P_t \cdot \text{duty cycle}$
  - b)  $P_{avg} = P_t \cdot \text{pulse width} \cdot \text{prf}$
  - c) both of the above
  - d) None of these
- 5) Accurate Measurement of attenuation can be done by \_\_\_\_\_ method.
  - a) Power Ratio
  - b) RF substitution
  - c) using magic Tee
  - d) Using slotted line
- 6) H-plane Tee is called \_\_\_\_\_.
  - a) Current divider
  - b) Power device
  - c) 3 dB splitter
  - d) Reciprocal device
- 7) In case of directional coupler amount of coupling is decided by \_\_\_\_\_.
  - a) Hole dimensions
  - b) Number of holes
  - c) Both A & B
  - d) None of these
- 8) In case of Matched load \_\_\_\_\_.
  - a) Transmission is zero
  - b) Reflection is zero
  - c) Reflection is unity
  - d) Transmission is equal to reflection

- 9) PIN diode is \_\_\_\_\_ type solid state device.
- a) Controllable impedance                      b) Negative resistance  
c) Non-linear reactance                        d) Non-linear resistance
- 10) The Two -valley model is best suited to explain the working of \_\_\_\_\_.
- a) IMPATT diode                                      b) TRAPATT diode  
c) Gunn diode                                        d) PIN diode
- 11) The dominant mode in rectangular waveguide is \_\_\_\_\_.
- a) TE<sub>10</sub>                                                      b) TE<sub>11</sub>  
c) TE<sub>01</sub>                                                      d) TE<sub>12</sub>
- 12) A lossless Transmission line operating at 200 M rad/sec has  $L = 0.6 \mu\text{H}$ ,  
 $C = 10 \text{ pF/m}$ . Characteristic impedance of this transmission line is \_\_\_\_\_.
- a) 244.94  $\Omega$                                               b) 376.7  $\Omega$   
c) 173.20  $\Omega$                                               d) None of these
- 13) An accelerating dc voltage of 10 kV will result in an electron velocity of \_\_\_\_\_ m/sec.
- a)  $5.93 \times 10^6$                                               b)  $59.3 \times 10^6$   
c)  $0.593 \times 10^6$                                               d)  $5.93 \times 10^8$
- 14) In case of Magnetron frequency pulling takes place due to \_\_\_\_\_ variations.
- a) Supply                                                      b) Load  
c) Frequency                                                      d) Amplitude

Set **S**

**T.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**RADAR & MICROWAVE ENGINEERING**

Day & Date: Friday, 22-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Assume suitable data if required.

**Section – I**

**Q.2 Attempt any Three** **12**

- a) Explain working of two hole Directional Coupler.
- b) A lossless  $100 \Omega$  transmission line terminated in  $200 + j 200 \Omega$ .  
Find:
  - 1) voltage reflection coefficient
  - 2) Transmission coefficient
  - 3) VSWR
- c) What is PIN diode? Explain any two applications of PIN diode.
- d) IMPATT diode has following parameters  $V_d = 2 \times 10^7$  cm/s,  $L = 6 \mu\text{m}$ ,  $V_0 = 100$  V,  $I_0 = 200$  mA. Find maximum continuous wave output power and frequency of operation if efficiency is 15%.

**Q.3 Attempt any Two.** **16**

- a) Derive S matrix for E plane tee. Justify the statement “E plane tee acts as a 3 dB splitter”.
- b) Write & Explain High frequency limitations of conventional tubes.
- c) Determine the cut-off wavelength for the dominant mode in a rectangular waveguide of breadth 10 cms. For 2.5 GHz signal propagated in this waveguide in the dominant mode calculate the guide wavelength in dominant mode, group and phase velocities.

**Section – II**

**Q.4 Attempt any Three.** **12**

- a) Reflex Klystron operated at 56 Hz with anode voltage 1000 V and cavity gap 2mm. Calculate gap transit angle. Assume  $1 \frac{3}{4}$  mode,  $V_R = -500$  V.
- b) Explain any one method for measurement of VSWR.
- c) Explain Gunn Effect using Two Valley Theory.
- d) Explain Radar Displays.

**Q.5 Attempt any Two.**

- a)** Derive Radar range equation.
- b)** Two cavity klystron amplifier has following parameters  
Anode to cathode voltage = 1200 V  
Beam current = 28 mA  
Frequency = 8 GHz  
Gap spacing in either cavity = 1 mm  
Spacing between two cavities = 4 cm  
Effective shunt impedance = 40 kohm (Excluding beam loading)  
Calculate:  
i) Electron velocity  
ii) Input gap voltage to give maximum voltage across input cavity  
iii) Efficiency of the amplifier neglecting beam loading  
iv) Voltage Gain in decibels
- c)** Explain any two methods for measurement of attenuation.

**T.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
MICROCONTROLLER - II (PIC)**

Day & Date: Saturday, 23-11-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q.No.1 is compulsory. It should be solved in the first 30 minutes in the answer book.  
2) Figures to the right indicate full marks.  
3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Which of the following FSR is used for indirect addressing mode of PIC?
  - a) INTCON
  - b) INDF
  - c) PCL
  - d) STATUS
- 2) Special Purpose Registers of PIC 16F877 are mapped into data space at \_\_\_\_\_.
  - a) 00H - 1FH
  - b) 80H - 9FH
  - c) both a & b
  - d) None of these
- 3) The SLEEP instructions makes the PIC 16F877 \_\_\_\_\_.
  - a) Reset
  - b) Standby mode
  - c) Power down mode
  - d) none of these
- 4) The Vref for ADC in PIC 16F877 is selected by \_\_\_\_\_ register.
  - a) ADCON0
  - b) ADCON1
  - c) ADRES
  - d) PIR1
- 5) The CALL and GOTO instructions provides \_\_\_\_\_ bit address to allow branching within any \_\_\_\_\_ program memory space
  - a) 11, 2K
  - b) 13, 8K
  - c) 16, 64K
  - d) None of these
- 6) The stack memory for PIC16F877 is the part of \_\_\_\_\_.
  - a) Program Memory
  - b) Data Memory
  - c) Either program or data memory
  - d) Neither program nor data memory
- 7) PSA (Prescaler assignment) bit in the option register equals to 1 then \_\_\_\_\_.
  - a) Prescaler enabled
  - b) Prescaler disabled
  - c) Prescaler assigned to WDT
  - d) Prescaler assigned to TIMER0

- 8) PIR1 register contains \_\_\_\_\_ and PIE1 contains \_\_\_\_\_ bits.
- Interrupt Priority, Interrupt Enable
  - Interrupt Flag, Interrupt Priority
  - Interrupt Priority, Interrupt Flag
  - Interrupt Flag, Interrupt Enable
- 9) The timer used for capture, compare and PWM mode respectively are \_\_\_\_\_.
- Timer 0, Timer 1, Timer 2
  - Timer 2, Timer 1, Timer 0
  - Timer 1, Timer 1, Timer 2
  - Timer 2, Timer 1, Timer 1
- 10) What is the execution speed of instruction in PIC while operating at the maximum value of clock rate?
- 0.1  $\mu$ s
  - 0.2  $\mu$ s
  - 0.4  $\mu$ s
  - 0.8  $\mu$ s
- 11) What is the status of shift clock supply in an USART synchronous mode?
- Master – internally, Slave – externally
  - Master – externally, Slave – internally
  - Master & Slave (both) – internally
  - Master & Slave (both) – externally
- 12) Which bit of the SSPCON must be necessarily set so as to enable the synchronization of serial port?
- WCOL
  - SSPOV
  - CKP
  - SSPEN
- 13) What is the fundamental role exhibited by the CCP module in compare mode in addition to timer 1?
- To vary the status of synchronization levels
  - To vary the duty cycle of the rectified output
  - To vary the oscillator frequencies in order to receive larger periods
  - To vary the pin status in accordance to the precisely controlled time
- 14) Which among the below mentioned aspect issues are supported by capture / compare / PWM modules corresponding to time in PIC 16F877?
- Capture Mode
  - Compare Mode
  - PWM mode
  - All of these

**Electronics & Telecommunication Engineering**  
**MICROCONTROLLER - II (PIC)**

Day & Date: Saturday, 23-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

- Q.2 A) Attempt any two of the following questions. 10**
- 1) Explain the memory organization of PIC16F877.
  - 2) Explain and give necessity of Brown out reset and Watch Dog Timer.
  - 3) Give the steps to be followed for doing A / D conversion in PIC16F877.
- B) Explain the following instructions 04**
- 1) clrwdt
  - 2) incfsz
- Q.3 Attempt any two of the following questions. 14**
- a) With neat block diagram explain PWM mode. How to vary PWM period and duty cycle?
  - b) Explain CCP1 module, how it is used for compare function along with Timer1?
  - c) Write assembly language program to complement the data on PORTD at regular interval of time. Use timer 0 to generate a delay.

**Section – II**

- Q.4 A) Attempt any two of the following questions. 10**
- a) Explain how SPI bus can be used for I/O expansion.
  - b) Draw interfacing of a switch and LED to PIC, when switch is closed the LED should turn ON. Write assembly language program for this.
  - c) Explain I<sup>2</sup>C Bus and how to use it?
- B) Explain the features of PIC18. 04**
- Q.5 Attempt any two of the following questions. 14**
- a) Interface 16x2 LCD to PIC 16F877 and write assembly language program to display INDIA on second line of LCD.
  - b) How to initialize USART for transmission of data in Asynchronous mode. Explain the registers associated with it.
  - c) Explain any one automation and control application based on PIC.

Day & Date: Saturday, 23-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

- Q.2 A) Attempt any two of the following questions. 10**
- 1) Explain the memory organization of PIC16F877.
  - 2) Explain and give necessity of Brown out reset and Watch Dog Timer.
  - 3) Give the steps to be followed for doing A / D conversion in PIC16F877.
- B) Explain the following instructions 04**
- 1) clrwdt
  - 2) incfsz
- Q.3 Attempt any two of the following questions. 14**
- a) With neat block diagram explain PWM mode. How to vary PWM period and duty cycle?
  - b) Explain CCP1 module, how it is used for compare function along with Timer1?
  - c) Write assembly language program to complement the data on PORTD at regular interval of time. Use timer 0 to generate a delay.

**Section – II**

- Q.4 A) Attempt any two of the following questions. 10**
- a) Explain how SPI bus can be used for I/O expansion.
  - b) Draw interfacing of a switch and LED to PIC, when switch is closed the LED should turn ON. Write assembly language program for this.
  - c) Explain I<sup>2</sup>C Bus and how to use it?
- B) Explain the features of PIC18. 04**
- Q.5 Attempt any two of the following questions. 14**
- a) Interface 16x2 LCD to PIC 16F877 and write assembly language program to display INDIA on second line of LCD.
  - b) How to initialize USART for transmission of data in Asynchronous mode. Explain the registers associated with it.
  - c) Explain any one automation and control application based on PIC.

Set **P**

**T.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ELECTRONICS APPLICATIONS & SYSTEM DESIGN**

Day & Date: Monday, 25-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) For AC power control using DIAC and TRIAC using 230 V AC input, power loss across TRIAC is approximately \_\_\_\_\_% of load power.
 

|        |       |
|--------|-------|
| a) 5   | b) 10 |
| c) 0.5 | d) 1  |
- 2) For SCR, holding current is \_\_\_\_\_ than latching current.
 

|            |                     |
|------------|---------------------|
| a) Greater | b) Less             |
| c) equal   | d) both (a) and (c) |
- 3) In reverse blocking mode of a SCR, junction \_\_\_\_\_.
 

|                                          |
|------------------------------------------|
| a) J2 reverse & J1, J3 forward bias      |
| b) J3 forward bias & J1, J2 reverse bias |
| c) J1, J3 reverse & J2 forward bias      |
| d) J1, J2 forward & J3 reverse bias      |
- 4) A single phase fully controlled converter with highly inductive load & freewheeling diode provides \_\_\_\_\_direction of voltage & \_\_\_\_\_direction of current.
 

|                       |                       |
|-----------------------|-----------------------|
| a) Positive, Negative | b) Positive, Positive |
| c) Negative, Positive | d) Negative, Negative |
- 5) Single phase fully controlled rectifier with inductive load is operated from 230 V, 50 Hz AC input & firing angle is 30°. Frequency of ripple in the output is \_\_\_\_\_ Hz.
 

|        |        |
|--------|--------|
| a) 50  | b) 100 |
| c) 150 | d) 200 |
- 6) For Class A commutation series R-L-C circuit in series with SCR is \_\_\_\_\_.
 

|                      |                |
|----------------------|----------------|
| a) Under damped      | b) Over damped |
| c) Critically damped | d) none        |
- 7) IC 1596 is \_\_\_\_\_.
 

|                               |                       |
|-------------------------------|-----------------------|
| a) 3 <sub>1/2</sub> digit DVM | b) Balanced modulator |
| c) PLL                        | d) Timer              |
- 8) The time period of IC 2240 is given as \_\_\_\_\_.
 

|               |                      |
|---------------|----------------------|
| a) T = RC     | b) T = 0.67 RC       |
| c) T = 0.7 RC | d) None of the above |

|          |  |

**T.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
ELECTRONICS APPLICATIONS & SYSTEM DESIGN**

Day &amp; Date: Monday, 25-11-2019

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) All Questions are compulsory.  
2) Figures to the right indicate full marks.  
3) Assume suitable data if necessary.

**Section – I**

- Q.2 Answer any three of the following question. 12**
- Draw and explain two transistor analogy of an SCR.
  - Explain Class - B type commutation of SCR.
  - Draw and explain AC power control using DIAC and TRIAC for lamp dimmer.
  - Explain the basic principle of working of balanced modulator with waveform.
- Q.3 Answer any one of the following question. 08**
- Draw construction and VI characteristics of SCR and explain its working.
  - Draw and explain single phase controlled rectifier with center tapped transformer and resistive load. Derive expression for average output voltage & rms load voltage.
- Q.4 Design frequency synthesizer to generate a frequency of 0.1 KHz to 999.9 KHz using PLL 565. 08**

**Section – II**

- Q.5 Answer any three of the following question. 12**
- Design a timer using XR 2240 to generate a delay of 300 seconds.
  - Design voltage to current converter to convert 0 to 5 V into 4 to 20 mA.
  - Draw and explain architecture of PLC.  
Compare between ON – OFF controller and proportional controller.
- Q.6 Answer any one of the following question. 08**
- Design frequency measurement set up to measure frequency up to 100 KHz with 0.1 Hz accuracy. Use IC 74C926.
  - Design ON-OFF temperature controller to control temperature in range of 0 to 100 °C. set point is 60 °C and required full scale output is 10 V.
- Q.7 Answer any one of the following question. 08**
- Design 3 ½ digit DVM for measurement of  $V_{in} = \pm 2V$ . Use 1 MHz clock.
  - Draw and explain ladder diagram for bottle filling plant system.

- 10) In reverse blocking mode of a SCR, junction \_\_\_\_\_.
- a) J2 reverse & J1, J3 forward bias
  - b) J3 forward bias & J1, J2 reverse bias
  - c) J1, J3 reverse & J2 forward bias
  - d) J1, J2 forward & J3 reverse bias
- 11) A single phase fully controlled converter with highly inductive load & freewheeling diode provides \_\_\_\_\_direction of voltage & \_\_\_\_\_direction of current.
- a) Positive, Negative
  - b) Positive, Positive
  - c) Negative, Positive
  - d) Negative, Negative
- 12) Single phase fully controlled rectifier with inductive load is operated from 230 V, 50 Hz AC input & firing angle is  $30^\circ$ . Frequency of ripple in the output is \_\_\_\_\_ Hz.
- a) 50
  - b) 100
  - c) 150
  - d) 200
- 13) For Class A commutation series R-L-C circuit in series with SCR is \_\_\_\_\_.
- a) Under damped
  - b) Over damped
  - c) Critically damped
  - d) none
- 14) IC 1596 is \_\_\_\_\_.
- a)  $3\frac{1}{2}$  digit DVM
  - b) Balanced modulator
  - c) PLL
  - d) Timer

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Single phase fully controlled rectifier with inductive load is operated from 230 V, 50 Hz AC input & firing angle is  $30^\circ$ . Frequency of ripple in the output is \_\_\_\_\_ Hz.
  - a) 50
  - b) 100
  - c) 150
  - d) 200
- 2) For Class A commutation series R-L-C circuit in series with SCR is \_\_\_\_\_.
  - a) Under damped
  - b) Over damped
  - c) Critically damped
  - d) none
- 3) IC 1596 is \_\_\_\_\_.
  - a)  $3\frac{1}{2}$  digit DVM
  - b) Balanced modulator
  - c) PLL
  - d) Timer
- 4) The time period of IC 2240 is given as \_\_\_\_\_.
  - a)  $T = RC$
  - b)  $T = 0.67 RC$
  - c)  $T = 0.7 RC$
  - d) None of the above
- 5) The number of IC 74926 required to count frequency of 1 MHz with 0.1 Hz resolution is \_\_\_\_\_.
  - a) 4
  - b) 2
  - c) 7
  - d) 8
- 6) When trigger and reset both are applied simultaneously to IC 2240 then?
  - a) Trigger gets activated
  - b) Reset gets activated
  - c) Both a and b
  - d) None
- 7) The IC XR 2240 consist of \_\_\_\_\_.
  - a) 8 bit Counter
  - b) 4 bit Counter
  - c) 8 digit Counter
  - d) 4 digit Counter
- 8) Which of the following temperature sensor has sensitivity  $10 \text{ mv}/^\circ \text{c}$ 
  - a) LM 35
  - b) J-type thermocouple
  - c) PT 100
  - d) None
- 9) Which of following is self powered temperature sensor?
  - a) Thermocouple
  - b) RTD
  - c) Thermistor
  - d) None of these

- 10) For input voltage range 0 - 2V,  $t_2 = 2000$ , required DVM display is.
- |              |              |
|--------------|--------------|
| a) 2 digit   | b) 3 digit   |
| c) 3 ½ digit | d) 3 ¾ digit |
- 11) For AC power control using DIAC and TRIAC using 230 V AC input, power loss across TRIAC is approximately \_\_\_\_\_% of load power.
- |        |       |
|--------|-------|
| a) 5   | b) 10 |

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** **14**

- 1) The total number of guided modes for a step index fiber is approximately given by expression, where  $V$  is normalized frequency as \_\_\_\_\_.
 

|                       |                       |
|-----------------------|-----------------------|
| a) $M = \sqrt{2} / 2$ | b) $M = \sqrt{2} / 3$ |
| c) $M = V / 2$        | d) $M = \sqrt{2} / 4$ |
- 2) Multimode graded index fibers exhibit for less intermodal dispersion than multimode step index fibers due to their \_\_\_\_\_.
 

|                             |                         |
|-----------------------------|-------------------------|
| a) Structure                | b) Acceptance angle     |
| c) Refractive index profile | d) Multipath reflection |
- 3) When angle of refraction is  $90^\circ$  and the refracted ray emerges parallel to interface between dielectrics the angle of incidence must be less than  $90^\circ$ . This limiting case is known as \_\_\_\_\_.
 

|                       |                     |
|-----------------------|---------------------|
| a) Critical angle     | b) Acceptance angle |
| c) Numerical aperture | d) Skew ray         |
- 4) The internal quantum efficiency of LED decreases with \_\_\_\_\_.
 

|                         |                     |
|-------------------------|---------------------|
| a) Increase in temp     | b) Decrease in temp |
| c) Increase in pressure | d) None of these    |
- 5) Laser is \_\_\_\_\_ optical source

**T.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**OPTICAL COMMUNICATION**

Day & Date: Tuesday, 26-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

**Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**Section – I**

**Q.2 Answer any three.** **12**

- a) List the characteristic of Injection Laser.
- b) Using simple ray theory, describe the mechanism for the transmission of light within an optical fiber.
- c) A 15 km optical fiber link uses fiber with a loss of  $1.5 \text{ dB km}^{-1}$ . The fiber is jointed every kilometre with connectors which give an attenuation of 0.8 dB each. Determine the minimum mean optical power which must be launched into the fiber in order to maintain a mean optical power level of  $0.3 \mu\text{W}$  at the detector.
- d) Define the normalized frequency for an optical fiber and explain its use in the determination of the number of guided modes propagating within a step index fiber. A step index fiber in air has a numerical aperture of 0.16, a core refractive index of 1.45 and a core diameter of  $60 \mu\text{m}$ . Determine the normalized frequency for the fiber when light at a wavelength of  $0.9 \mu\text{m}$  is transmitted. Further, estimate the number of guided modes propagating in the fiber.

**Q.3 Answer any two.** **16**

- a) Define the term LED power, efficiency and drive the expression for them.
- b) Two step index fibers exhibit the following parameters:
  - 1) a multimode fiber with a core refractive index of 1.500, a relative refractive index difference of 3% and an operating wavelength of  $0.82 \mu\text{m}$ ;
  - 2) an  $8 \mu\text{m}$  core diameter single-mode fiber with a core refractive index the same as(1), a relative refractive index difference of 0.3% and an operating wavelength of  $1.55 \mu\text{m}$ . Estimate the critical radius of curvature at which large bending losses occur in both cases.
- c) Explain fiber alignment and joint loss.

**Section – II**

- Q.4 Answer any three** **12**
- a) Explain detection process in PIN photodiode. Compare the device with APD photodiode.
  - b) Explain the concept of SONET.
  - c) The quantum efficiency of particular silicon RAPD is 80% for the detection of radiation at a wavelength of 0.9  $\mu\text{m}$ . When the incident optical power is 0.5  $\mu\text{W}$ , the output current from the device (after avalanche gain) is 11  $\mu\text{A}$ . Determine the multiplication factor of the photodiode under these conditions.
  - d) Explain the concept of Link Design
- Q.5 Answer any two.** **16**
- a) A p-n photodiode has a quantum efficiency of 50% at a wavelength of 0.9  $\mu\text{m}$ . Calculate:
    - 1) its responsivity at 0.9  $\mu\text{m}$ ;
    - 2) the received optical power if the mean photocurrent is  $10^{-6}$  A
    - 3) the corresponding number of received photons at this wavelength.
  - b) Briefly explain the WDM.
  - c) Explain the transmitter and receiver design for optical communication.

 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.**

**14**

- 1) The requirement of detector is \_\_\_\_\_.
  - a) High fidelity
  - b) Larger size
  - c) More numerical aperture
  - d) All of above
- 2) A photodiode has a quantum efficiency of 70% when photos of energy  $1.8 \times 10^{-19}$  are incident upon it, then the responsivity of the photodiode is \_\_\_\_\_.
  - a) 0.694
  - b) 0.723
  - c) 0.369
  - d) 0.623
- 3) Wavelength division multiplexing is same as \_\_\_\_\_.
  - a) FDM
  - b) TDM
  - c) DWDM
  - d) None
- 4) In optical communication system, the light detector is: \_\_\_\_\_.
  - a) Avalanche Photo Diode (APD)
  - b) Positive Intrinsic Negative (PIN) diode
  - c) Phototransistor
  - d) Either a or b
- 5) Impact Ionization phenomenon occur in \_\_\_\_\_.
  - a) p-n photodiode
  - b) avalanche photodiode
  - c) p-i-n photodiode
  - d) none of these
- 6) The basic performance of WDM is determined by \_\_\_\_\_.
  - a) Insertion loss
  - b) Transmission loss
  - c) Noise added in channel
  - d) All of the Above
- 7) The electron hole pairs generated in a photodiode are separated by the \_\_\_\_\_.
  - a) Magnetic field
  - b) Electric field
  - c) Static field
  - d) Depletion region

**MOBILE COMMUNICATION**

Day & Date: Wednesday, 27-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in first 30 minutes in Answer Book.  
 2) Assume suitable data if necessary.  
 4) Figures to right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) GSM stands for \_\_\_\_\_.  
 a) Global service for mobile      b) Global scope for mobile  
 c) Group of special machines      d) Global system for mobile
- 2) The scheme in which each cell is allocated a predetermined set of voice channels is called as \_\_\_\_\_.  
 a) Dynamic channel      b) Fixed channel  
 c) Demand channel      d) Forward channel
- 3) In \_\_\_\_\_ Frequency Spectrum is divided into smaller spectra and is allocated to each user.  
 a) TDMA      b) CDMA  
 c) FDMA      d) FGMA
- 4) The antenna which attempts to direct all its energy in a particular direction is called as a \_\_\_\_\_.  
 a) Directional Antenna      b) One to one Antenna  
 c) Propagation Antenna      d) Single Direction Antenna
- 5) Reflection is?  
 a) Propagation mode      b) Propagation mechanism  
 c) Spread spectrum      d) None of the above
- 6) Spot Beam antenna is used in which of the following multiple access technique?  
 a) TDMA      b) FDMA  
 c) SDMA      d) Both (a) and (b)
- 7) The model considered for both direct path and ground reflected propagation path between T-R is \_\_\_\_\_.  
 a) Hata model      b) Two ray model  
 c) Free space model      d) Okumura model
- 8) Modulation technique used in CDMA 2000 is \_\_\_\_\_.  
 a) Uplink – QPSK, Downlink – BPSK  
 b) Uplink – BPSK, Downlink – QPSK  
 c) Uplink – BPSK, Downlink – BPSK  
 d) None of the above

- 9) In GSM the downlink frequency band is \_\_\_\_\_.
- a) 890-915 MHz
  - b) 935-960 MHz
  - c) 890-935 MHz
  - d) 917-945 MHz
- 10) An interface which connects a BTS to a BSC is called \_\_\_\_\_ interface.
- a) Channel Interface
  - b) Signaling Interface
  - c) Abis Interface
  - d) None of these
- 11) IMT 2000 stands for \_\_\_\_\_.
- a) International Mobile Telecommunication
  - b) Interim Mobile Telecommunication
  - c) International Mobile Technology
  - d) None of these
- 12) What is modulation technique used in IS-95 CDMA Reverse Channel?
- a) QPSK
  - b) OPQSK
  - c) MSK
  - d) FSK
- 13) GSM is a \_\_\_\_\_ generation cellular system.
- a) First
  - b) Second
  - c) Third
  - d) None of these
- 14) Each group of 26 consecutive TDMA frames is called a \_\_\_\_\_.
- a) Multi frame
  - b) Mini frame
  - c) Mainframe
  - d) All of the above

**T.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**MOBILE COMMUNICATION**

Day & Date: Wednesday, 27-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figure to the right indicates full marks.  
 3) Assume suitable data if necessary.

**Section – I**

**Q.2 Attempt any four of the following. 16**

- a) Explain the process of Handoff in cellular system.
- b) Find the far field distance for an antenna with maximum dimension of 1 meter and operating frequency of 900 MHz.
- c) Explain the concept of interference and system capacity.
- d) What is diffraction? Explain knife edge diffraction.
- e) Describe TDMA technique in detail and compare it with FDMA.

**Q.3 Attempt any two of the following. 12**

- a) Explain in brief different methods used to improve capacity of cellular system.
- b) For given path loss exponent (i)  $n = 4$  and (ii)  $n = 3$  find the frequency reuse factor and the cluster size that should be used for maximum capacity. The signal-to-interference ratio of 15 dB is minimum required for satisfactory forward channel performance of a cellular system. There are 6 co-channel cells in the first tier and all of them are at the same distance from the mobile.
- c) Explain ground reflection model (two ray model). Also prove that the  $\Delta = (2 h_t h_r) / d$   
 (Where  $\Delta$  - path difference between the Line of sight and ground reflected path)

**Section – II**

**Q.4 Attempt any four of the following. 16**

- a) Explain with neat block diagram forward channels in W-CDMA.
- b) Explain in detail forward IS 95-CDMA link structure.
- c) What is Handoff? Explain Handoff in GSM.
- d) Explain GSM frames in detail.
- e) Explain mobile call termination sequence in GSM.

**Q.5 Attempt any two of the following. 12**

- a) Explain 4G/LTE architecture.
- b) Draw and explain GSM signaling architecture in detail.
- c) Explain packet and frame format for forward and reverse CDMA IS-95 channels.

**T.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
MOBILE COMMUNICATION**

Day & Date: Wednesday, 27-11-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in first 30 minutes in Answer Book.  
2) Assume suitable data if necessary.  
4) Figures to right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Modulation technique used in CDMA 2000 is \_\_\_\_\_.
  - a) Uplink – QPSK, Downlink – BPSK
  - b) Uplink – BPSK, Downlink – QPSK
  - c) Uplink – BPSK, Downlink – BPSK
  - d) None of the above
  
- 2) In GSM the downlink frequency band is \_\_\_\_\_.
  - a) 890-915 MHz
  - b) 935-960 MHz
  - c) 890-935 MHz
  - d) 917-945 MHz
  
- 3) An interface which connects a BTS to a BSC is called \_\_\_\_\_ interface.
  - a) Channel Interface
  - b) Signaling Interface
  - c) Abis Interface
  - d) None of these
  
- 4) IMT 2000 stands for \_\_\_\_\_.
  - a) International Mobile Telecommunication
  - b) Interim Mobile Telecommunication
  - c) International Mobile Technology
  - d) None of these
  
- 5) What is modulation technique used in IS-95 CDMA Reverse Channel?
  - a) QPSK
  - b) OPQSK
  - c) MSK
  - d) FSK
  
- 6) GSM is a \_\_\_\_\_ generation cellular system.
  - a) First
  - b) Second
  - c) Third
  - d) None of these
  
- 7) Each group of 26 consecutive TDMA frames is called a \_\_\_\_\_.
  - a) Multi frame
  - b) Mini frame
  - c) Mainframe
  - d) All of the above
  
- 8) GSM stands for \_\_\_\_\_.
  - a) Global service for mobile
  - b) Global scope for mobile
  - c) Group of special machines
  - d) Global system for mobile

**T.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**MOBILE COMMUNICATION**

Day & Date: Wednesday, 27-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figure to the right indicates full marks.  
 3) Assume suitable data if necessary.

**Section - I**

**Q.2 Attempt any four of the following. 16**

- a) Explain the process of Handoff in cellular system.
- b) Find the far field distance for an antenna with maximum dimension of 1 meter and operating frequency of 900 MHz.
- c) Explain the concept of interference and system capacity.
- d) What is diffraction? Explain knife edge diffraction.
- e) Describe TDMA technique in detail and compare it with FDMA.

**Q.3 Attempt any two of the following. 12**

- a) Explain in brief different methods used to improve capacity of cellular system.
- b) For given path loss exponent (i)  $n = 4$  and (ii)  $n = 3$  find the frequency reuse factor and the cluster size that should be used for maximum capacity. The signal-to-interference ratio of 15 dB is minimum required for satisfactory forward channel performance of a cellular system. There are 6 co-channel cells in the first tier and all of them are at the same distance from the mobile.
- c) Explain ground reflection model (two ray model). Also prove that the  $\Delta = (2 h_t h_r) / d$   
 (Where  $\Delta$  - path difference between the Line of sight and ground reflected path)

**Section - II**

**Q.4 Attempt any four of the following. 16**

- a) Explain with neat block diagram forward channels in W-CDMA.
- b) Explain in detail forward IS 95-CDMA link structure.
- c) What is Handoff? Explain Handoff in GSM.
- d) Explain GSM frames in detail.
- e) Explain mobile call termination sequence in GSM.

**Q.5 Attempt any two of the following. 12**

- a) Explain 4G/LTE architecture.
- b) Draw and explain GSM signaling architecture in detail.
- c) Explain packet and frame format for forward and reverse CDMA IS-95 channels.

COMPUTER ORGANIZATION**

Day & Date: Thursday, 28-12-2019  
Time: 10:00 AM To 12:00 PM

Max. Marks: 40

**Instructions:** 1) Attempt any four questions from Q. No.2.  
2) Figures to right indicate full marks.

**Q.2 Attempt any four (each 10 marks)**

**40**

- a) Write note Virtual memory system.
- b) Explain instruction set formats in detail.
- c) Explain CISC and RISC Architecture in detail.
- d) Explain GCD processor hardwired control unit.
- e) Explain memory allocation schemes in details.
- f) Explain in detail cache memory organization.

**COMPUTER ORGANIZATION**

Day & Date: Thursday, 28-12-2019  
 Time: 10:00 AM To 12:00 PM

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 20 minutes in answer book.  
 2) Answer MCQ Objective type questions on Page No. 3 only  
 3) Figures to right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** **10**

- 1) Which register points to the first instruction to be executed when the processor starts.
 

|                  |                         |
|------------------|-------------------------|
| a) Accumulator   | b) Program counter      |
| c) Data register | d) Instruction register |
- 2) Speedup techniques of computer include \_\_\_\_\_.
 

|                |                 |
|----------------|-----------------|
| a) cache       | b) pipeline     |
| c) superscalar | d) all of these |
- 3) Floating point representation consist of \_\_\_\_\_.
 

|                   |                  |
|-------------------|------------------|
| a) Mantissa       | b) exponent      |
| c) Both a) and b) | d) none of these |
- 4) To read the control words sequentially \_\_\_\_\_ is used.
 

|        |                  |
|--------|------------------|
| a) PC  | b) IR            |
| c) uPC | d) None of these |
- 5) Data used with assembly language instruction in processors are nothing but \_\_\_\_\_.
 

|             |                  |
|-------------|------------------|
| a) Opcode   | b) Operand       |
| c) Register | d) None of these |
- 6) In Processor DMA Stand for \_\_\_\_\_.
 

|                          |                           |
|--------------------------|---------------------------|
| a) Direct Memory Access  | b) Division Memory Access |
| c) Direct mapping Access | d) All of the above       |
- 7) What is not true about RISC?
 

|                                 |                            |
|---------------------------------|----------------------------|
| a) Large no of addressing modes | b) Simple instruction      |
| c) Hardwired control unit       | d) A single chip processor |
- 8) To interface 2048 bytes of memory, how many address lines are required?
 

|       |       |
|-------|-------|
| a) 8  | b) 9  |
| c) 10 | d) 11 |
- 9) The addressing mode, where operand value is directly specified is called \_\_\_\_\_.
 

|              |             |
|--------------|-------------|
| a) Immediate | b) Direct   |
| c) Definite  | d) Relative |

- 10) Which representation is most efficient to perform arithmetic operations?
- a) Sign magnitude
  - b) 1's complements
  - c) 2's complements
  - d) None of these

 Time: 10:00 AM To 12:00 PM

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 20 minutes in answer book.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 10**

- 1) Process is \_\_\_\_\_.
  - a) program in High level language kept on disk
  - b) contents of main memory
  - c) a program in execution
  - d) a job in secondary memory
- 2) The strategy of allowing processes that are logically runnable to be temporarily suspended is called \_\_\_\_\_.
  - a) preemptive scheduling
  - b) non preemptive scheduling
  - c) Shortest job first
  - d) first come first served
- 3) A non-relocatable program is one which \_\_\_\_\_.
  - a) cannot be made to execute in any area of storage other than the one designated for it at the time of its coding or translation.
  - b) consists of a program and relevant information for its relocation.
  - c) can itself performs the relocation of its address-sensitive portions.
  - d) all of the above
- 4) Operating system \_\_\_\_\_.
  - a) links a program with the subroutines it references
  - b) provides a layered, user-friendly interface
  - c) enables the programmer to draw a flowchart
  - d) all of the above
- 5) Which of the following is not true about the memory management?
  - a) virtual memory is used only in multi-user systems
  - b) segmentation suffers from external fragmentation
  - c) paging suffers from internal fragmentation
  - d) segmented memory can be paged
- 6) Which of the following is characteristic of an operating system?
 

|                        |                   |
|------------------------|-------------------|
| a) resource management | b) error recovery |
| c) memory management   | d) All the above  |
- 7) A thread is a \_\_\_\_\_.
 

|            |                         |
|------------|-------------------------|
| a) Task    | b) Process              |
| c) Program | d) Light weight process |

- 8) In \_\_\_\_\_ the processes under consideration must be independent: that is, the order in which they execute must be unconstrained by any synchronization requirements.
- |                        |                       |
|------------------------|-----------------------|
| a) deadlock prevention | b) deadlock avoidance |
| c) deadlock detection  | d) deadlock deletion  |
- 9) In almost all modern multi programming systems, principal operation of memory management involves a sophisticated scheme known as \_\_\_\_\_.
- |                        |                        |
|------------------------|------------------------|
| a) memory partitioning | b) virtual memory      |
| c) real memory         | d) memory organization |
- 10) To access the services of operating system, the interface is provided by the \_\_\_\_\_.
- |                 |                          |

Marks: 10

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 10**

- 1) Which of the following is a sensor that measures the movement of an object?
  - a) Pressure sensor
  - b) Motion sensor
  - c) Action sensor
  - d) Touch sensor
- 2) The common robotic arm has \_\_\_\_\_ degrees of freedom.
  - a) Six
  - b) Five
  - c) Four
  - d) Three
- 3) The process of extracting, characterizing and interpreting information from images of 3 D world is referred as \_\_\_\_\_.
  - a) Robot vision
  - b) Robochar
  - c) Robo 3D
  - d) Roboextract
- 4) Robotic vehicles are used in \_\_\_\_\_.
  - a) Remotely operated communication systems
  - b) Space vehicles
  - c) Undersea exploration
  - d) All of the above
- 5) Programming of a robot can be done by \_\_\_\_\_.
  - a) Force sensors
  - b) Teach pendant programming
  - c) Tactile sensors
  - d) Touch sensors
- 6) The main objective(s) of Industrial robot is to \_\_\_\_\_.
  - a) To minimise the labour requirement
  - b) To increase productivity
  - c) To enhance the life of production machines
  - d) All of the above
- 7) The following sensor can detect nearby objects \_\_\_\_\_.
  - a) Touch sensor
  - b) Humidity sensor
  - c) Proximity sensor
  - d) Pressure sensor
- 8) A robot is a \_\_\_\_\_.
  - a) multifunctional and reprogrammable manipulator
  - b) unifunctional and reprogrammable manipulator
  - c) multifunctional and non-programmable manipulator
  - d) unifunctional and non-programmable manipulator

- 9) \_\_\_\_\_ can be used to measure the distance from a reference to the object in the field.
- |                 |                    |
|-----------------|--------------------|
| a) Force sensor | b) Pressure sensor |
| c) Range sensor | d) Torque sensor   |
- 10) The speed regulation is good in \_\_\_\_\_.
- |                                        |
|----------------------------------------|
| a) Series wound motor                  |
| b) Shunt wound motor                   |
| c) Can be series wound or shunt wound. |
| d) None of the above                   |

|                 |  |
|-----------------|--|
| <b>Seat No.</b> |  |
|-----------------|--|

**T.E. (Part – II) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ROBOTICS**

Day & Date: Thursday, 28-11-2019  
Time: 10:00 AM To 12:00 PM

Max. Marks: 40

**Instructions:** 1) Attempt any four questions from Q. No. 2.  
2) Figures to the right indicate full marks.

**Q.2 Attempt any four of the following: 40**

- a) Explain motion control of robots.
- b) Explain robotic applications.
- c) Explain the following terms related to robotics :
  - 1) Accuracy
  - 2) Precision
  - 3) Resolution
  - 4) Repeatability
  - 5) Speed
- d) Explain in brief about types of sensors.
- e) Explain Microelectromechanical systems and write in brief about classification of MEMS.
- f) What is machine Intelligence? Explain Computer and robotics - Future trends.
- g) Explain electrical drives for robotic articulation.

**Electronics & Telecommunication Engineering**  
**ROBOTICS**

Day & Date: Thursday, 28-11-2019  
 Time: 10:00 AM To 12:00 PM

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 20 minutes in answer Book.  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 10**

- 1) The main objective(s) of Industrial robot is to \_\_\_\_\_.
  - a) To minimise the labour requirement
  - b) To increase productivity
  - c) To enhance the life of production machines
  - d) All of the above
- 2) The following sensor can detect nearby objects \_\_\_\_\_.
 

|                     |                    |
|---------------------|--------------------|
| a) Touch sensor     | b) Humidity sensor |
| c) Proximity sensor | d) Pressure sensor |
- 3) A robot is a \_\_\_\_\_.
  - a) multifunctional and reprogrammable manipulator
  - b) unifunctional and reprogrammable manipulator
  - c) multifunctional and non-programmable manipulator
  - d) unifunctional and non-programmable manipulator
- 4) \_\_\_\_\_ can be used to measure the distance from a reference to the object in the field.
 

|                 |                    |
|-----------------|--------------------|
| a) Force sensor | b) Pressure sensor |
| c) Range sensor | d) Torque sensor   |
- 5) The speed regulation is good in \_\_\_\_\_.
  - a) Series wound motor
  - b) Shunt wound motor
  - c) Can be series wound or shunt wound.
  - d) None of the above
- 6) Which of the following is a sensor that measures the movement of an object?
 

|                    |                  |
|--------------------|------------------|

**Electronics & Telecommunication Engineering**  
**RADAR & MICROWAVE ENGINEERING**

Day & Date: Friday, 22-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate maximum marks.  
 3) Assume the data whenever necessary.

**Section – I**

**Q.2 Attempt any three** **12**

- a) Explain Transmission line equation in terms of voltage and current.
- b) Define following with the help waveguide -
  - i) Cut off Condition
  - ii) Dominant mode
  - iii) Degenerative mode
  - iv) Evanescent mode
- c) Explain E plane tee as 3 dB coupler.
- d) Explain Magic tee as Impedance Bridge.
- e) Derive the following for  $TE_{mn}$  mode in rectangular waveguide -
  - i) Cut off wave number
  - ii) Guided wavelength
  - iii) Phase velocity in guide
  - iv) Characteristics Impedance of guide

**Q.3 Attempt any two** **16**

- a) An air filled rectangular waveguide of inner dimensions 5 x 2 cm operates in  $TE_{11}$  mode at 10GHz. Find -
  - i) Cut off wave frequency
  - ii) Propagation constant
  - iii) Guided wavelength
  - iv) Phase velocity in waveguide
- b) A transmission line 10 miles long operates at 10 KHz and has parameters  $R=30\Omega/\text{miles}$ ,  $C= 80\text{nF}/\text{miles}$ ,  $L=2.2\text{mH}/\text{miles}$ , and  $G=20\text{nS}/\text{miles}$ . Find characteristics impedance, attenuation per miles, phase shift per miles, phase velocity and wavelength.
- c) Derive the field equation of  $TM_{mn}$  mode in rectangular waveguide assuming wave is propagating in z-direction.

**Section – II**

**Q.4 Attempt any three** **12**

- a) Explain wave meter method for frequency measurement.
- b) Explain radar display methods.
- c) Calculate minimum receivable signal in radar receiver, which has I.F. band of 1.75 MHz and 7.5dB noise figure.
- d) For Two cavity klystron, voltage gain is 15dB, input power 5mW,  $R_{sh}$  of input cavity is  $30K\Omega$ ,  $R_{sh}$  of output cavity is  $40 K\Omega$ . Determine- input RMS voltage, output RMS voltage.
- e) Explain Zero mode of Magnetron.

**Q.5 Attempt any two**

- a) Explain effect of noise on Radar Range.
- b) Derive and explain Velocity modulation in two cavity klystron tube with Applegate diagram.
- c) Explain Doppler Effect. Also draw and explain MTI radar.

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate maximum marks.  
 3) Assume the data whenever necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) When the target is moving away from the CW Doppler radar, the received frequency \_\_\_\_\_.
  - a) is higher than the transmitted frequency
  - b) is lower than the transmitted frequency
  - c) has a lot of harmonic content
  - d) none of these
- 2) If the peak transmitted power in a radar system is increased by a factor of 81, the maximum range increases by a factor of \_\_\_\_\_.
  - a) 3
  - b) 6
  - c) 9
  - d) 81
- 3) The CAHO in MTI radar operates at the \_\_\_\_\_.
  - a) transmitted frequency
  - b) intermediate frequency
  - c) received frequency
  - d) none of these
- 4) TWT uses a helix \_\_\_\_\_.
  - a) To reduce the axial velocity of RF field
  - b) To ensure broad band operation
  - c) To increase the efficiency
  - d) To reduce the noise
- 5) The  $\pi$ -mode of resonance in a traveling wave magnetron is characterizes by \_\_\_\_\_.
  - a)  $n=N$
  - b)  $n=N/4$
  - c)  $n=N/2$
  - d) none of the above
- 6) Electron bunching in reflex klystron occurs in the \_\_\_\_\_.
  - a) input cavity only
  - b) vicinity of repeller electrode
  - c) centre of drift space
  - d) none of these
- 7) A magnetron has average power of 100 watts and duty cycle 2%. Its peak power output power is \_\_\_\_\_.
  - a) 50W
  - b) 100W
  - c) 5000W
  - d) 10,000W

- 8) In microwave, we take the elements as \_\_\_\_\_.
- a) lumped circuit element
  - b) distributed circuit element
  - c) both a) and b)
  - d) None of above
- 9) The Wavelength of microwaves at 100 GHz will be\_\_\_\_\_.
- a) 3cm
  - b) 0.3cm
  - c) 0.03cm
  - d) 0.3m
- 10) The transferred electron bulk effect occurs in \_\_\_\_\_.
- a) germanium
  - b) silicon
  - c) gallium arsenide
  - d) boron
- 11) Waveguide may be considered as\_\_\_\_\_.
- a) high pass filter
  - b) low pass filter
  - c) band pass filter
  - d) band reject filter
- 12) In case of matched load\_\_\_\_\_.
- a) transmission is zero
  - b) reflection is zero
  - c) reflection is unity
  - d) transmission is equals to reflection
- 13) Tee's and junctions constitutes \_\_\_\_\_.
- a) single port network
  - b) two port network
  - c) Three port network
  - d) three or more port network
- 14) The propagation constant of a transmission line is given by.
- a)  $\sqrt{\frac{R+j\omega L}{G+j\omega C}}$
  - b)  $\sqrt{(R + j\omega L)(g + J\omega c)}$
  - c)  $\sqrt{1/LC}$
  - d) none of these

Find characteristics impedance, attenuation per miles, phase shift per miles, phase velocity and wavelength.
- c) Derive the field equation of  $TM_{mn}$  mode in rectangular waveguide assuming wave is propagating in z-direction.

**Section – II**

**Q.4 Attempt any three** **12**

- a) Explain wave meter method for frequency measurement.
- b) Explain radar display methods.
- c) Calculate minimum receivable signal in radar receiver, which has I.F. band of 1.75 MHz and 7.5dB noise figure.
- d) For Two cavity klystron, voltage gain is 15dB, input power 5mW,  $R_{sh}$  of input cavity is  $30K\Omega$ ,  $R_{sh}$  of output cavity is  $40 K\Omega$ . Determine- input RMS voltage, output RMS voltage.
- e) Explain Zero mode of Magnetron.

**Q.5 Attempt any two**

- a) Explain effect of noise on Radar Range.
- b) Derive and explain Velocity modulation in two cavity klystron tube with Applegate diagram.
- c) Explain Doppler Effect. Also draw and explain MTI radar.

**T.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**RADAR & MICROWAVE ENGINEERING**

Day & Date: Friday, 22-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate maximum marks.  
 3) Assume the data whenever necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The CAHO in MTI radar operates at the \_\_\_\_\_.  
 a) transmitted frequency                      b) intermediate frequency  
 c) received frequency                          d) none of these
- 2) TWT uses a helix \_\_\_\_\_.  
 a) To reduce the axial velocity of RF field  
 b) To ensure broad band operation  
 c) To increase the efficiency  
 d) To reduce the noise
- 3) The  $\pi$ -mode of resonance in a traveling wave magnetron is characterizes by \_\_\_\_\_.  
 a)  $n=N$                                               b)  $n=N/4$   
 c)  $n=N/2$                                           d) none of the above
- 4) Electron bunching in reflex klystron occurs in the \_\_\_\_\_.  
 a) input cavity only                              b) vicinity of repeller electrode  
 c) centre of drift space                          d) none of these
- 5) A magnetron has average power of 100 watts and duty cycle 2%. Its peak power output power is \_\_\_\_\_.  
 a) 50W                                              b) 100W  
 c) 5000W                                          d) 10,000W
- 6) In microwave, we take the elements as \_\_\_\_\_.  
 a) lumped circuit element  
 b) distributed circuit element  
 c) both a) and b)  
 d) None of above
- 7) The Wavelength of microwaves at 100 GHz will be \_\_\_\_\_.  
 a) 3cm                                              b) 0.3cm  
 c) 0.03cm                                          d) 0.3m
- 8) The transferred electron bulk effect occurs in \_\_\_\_\_.  
 a) germanium                                      b) silicon  
 c) gallium arsenide                              d) boron

- 9) Waveguide may be considered as\_\_\_\_\_.
- a) high pass filter                      b) low pass filter  
c) band pass filter                      d) band reject filter
- 10) In case of matched load\_\_\_\_\_.
- a) transmission is zero  
b) reflection is zero  
c) reflection is unity  
d) transmission is equals to reflection
- 11) Tee's and junctions constitutes \_\_\_\_\_.
- a) single port network                      b) two port network  
c) Three port network                      d) three or more port network
- 12) The propagation constant of a transmission line is given by.
- a)  $\sqrt{\frac{R+j\omega L}{G+j\omega C}}$                       b)  $\sqrt{(R + j\omega L)(g + J\omega c)}$   
c)  $\sqrt{1/LC}$                       d) none of these
- 13) When the target is moving away from the CW Doppler radar, the received frequency \_\_\_\_\_.
- a) is higher than the transmitted frequency  
b) is lower than the transmitted frequency  
c) has a lot of harmonic content  
d) none of these
- 14) If the peak transmitted power in a radar system is increased by a factor of 81, the maximum range increases by a factor of \_\_\_\_\_
- a) 3                      b) 6  
c) 9                      d) 81

**T.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**RADAR & MICROWAVE ENGINEERING**

Day & Date: Friday, 22-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate maximum marks.  
 3) Assume the data whenever necessary.

**Section – I**

**Q.2 Attempt any three** **12**

- a) Explain Transmission line equation in terms of voltage and current.
- b) Define following with the help waveguide -
  - i) Cut off Condition
  - ii) Dominant mode
  - iii) Degenerative mode
  - iv) Evanescent mode
- c) Explain E plane tee as 3 dB coupler.
- d) Explain Magic tee as Impedance Bridge.
- e) Derive the following for  $TE_{mn}$  mode in rectangular waveguide -
  - i) Cut off wave number
  - ii) Guided wavelength
  - iii) Phase velocity in guide
  - iv) Characteristics Impedance of guide

**Q.3 Attempt any two** **16**

- a) An air filled rectangular waveguide of inner dimensions 5 x 2 cm operates in  $TE_{11}$  mode at 10GHz. Find -
  - i) Cut off wave frequency
  - ii) Propagation constant
  - iii) Guided wavelength
  - iv) Phase velocity in waveguide
- b) A transmission line 10 miles long operates at 10 KHz and has parameters  $R=30\Omega/\text{miles}$ ,  $C=80\text{nF}/\text{miles}$ ,  $L=2.2\text{mH}/\text{miles}$ , and  $G=20\text{nS}/\text{miles}$ . Find characteristics impedance, attenuation per miles, phase shift per miles, phase velocity and wavelength.
- c) Derive the field equation of  $TM_{mn}$  mode in rectangular waveguide assuming wave is propagating in z-direction.

**Section – II**

**Q.4 Attempt any three** **12**

- a) Explain wave meter method for frequency measurement.
- b) Explain radar display methods.
- c) Calculate minimum receivable signal in radar receiver, which has I.F. band of 1.75 MHz and 7.5dB noise figure.
- d) For Two cavity klystron, voltage gain is 15dB, input power 5mW,  $R_{sh}$  of input cavity is  $30K\Omega$ ,  $R_{sh}$  of output cavity is  $40K\Omega$ . Determine- input RMS voltage, output RMS voltage.

- e) Explain Zero mode of Magnetron.

**SLR-FM-250**

**Set**

MICROCONTROLLERS AND APPLICATIONS**

Day & Date: Saturday, 23-11-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.  
2) Use of non programmable Calculator is allowed.  
3) Assume Suitable Data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.**

**14**

- 1) SJMP instruction is \_\_\_\_\_ byte instruction.
  - a) 1
  - b) 2
  - c) 3
  - d) None
- 2) In the 8051, control can be transferred anywhere within the \_\_\_\_\_ K bytes of, code space if using the LCALL instruction.
  - a) 8
  - b) 16
  - c) 32
  - d) 64
- 3) In 8051, SP register is \_\_\_\_\_ bit wide.
  - a) 8
  - b) 16
  - c) 32
  - d) None
- 4) What is the address of DPL \_\_\_\_\_.
  - a) 83H
  - b) 82H
  - c) 81H
  - d) 88H
- 5) In microcontroller & LCD interface, which line will instruct the LCD that microcontroller sending a data or command?
  - a) DB0
  - b) RW
  - c) EN
  - d) RS
- 6) What are the address of SFR's IE, IP, PSW & TH 0 respectively?
  - a) 99h,88h,90h,81h
  - b) 87h,d 0h,8bh,8ch
  - c) a8h,b8h,d 0h,8ch
  - d) 98h,89h,d 0h,8ah
- 7) Out of following registers, which register is not bit addressable register?
  - a) PSW
  - b) TCON
  - c) SBUF
  - d) IE
- 8) Which of the following FSR is used for indirect addressing mode of PIC?
  - a) INTCON
  - b) INDF
  - c) PCL
  - d) STATUS
- 9) The PIC actually uses a \_\_\_\_\_ program counter.
  - a) 12 bit
  - b) 13 bit
  - c) 14 bit
  - d) 15 bit

- 10) Special Purpose Registers of PIC 16F877 are mapped into data space at \_\_\_\_\_.
  - a) 00H-1FH
  - b) 80H - 9FH
  - c) both a & b
  - d) none of these
- 11) The Vref for ADC in PIC is selected by \_\_\_\_\_ register.
  - a) ADCONO
  - b) ADCON1
  - c) ADRES
  - d) PIR1
- 12) The timer used for capture, compare and PWM mode respectively are \_\_\_\_\_.
  - a) Timer 0, Timer 1, Timer 2
  - b) Timer 2, Timer 1 , Timer 0
  - c) Timer 1, Timer 1, Timer 2
  - d) Timer 2, Timer 1, Timer 1
- 13) PIR1 register contains \_\_\_\_\_ and PIE1 contains \_\_\_\_\_ bits.
  - a) Interrupt Priority, Interrupt Enable
  - b) Interrupt Flag, Interrupt Priority
  - c) Interrupt Priority, Interrupt Flag
  - d) Interrupt Flag, Interrupt Enable
- 14) PSA (Prescaler assignment) bit in the option register equals to 1 then \_\_\_\_\_.
  - a) Prescaler enabled
  - b) Prescaler disabled
  - c) Prescaler assigned to WDT
  - d) Prescaler assigned to TIMERO

**T.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
MICROCONTROLLERS AND APPLICATIONS**

Day & Date: Saturday, 23-11-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full marks.

**Section – I**

**Q.2 Solve any three.** **12**

- a) Explain following instructions.
- 1) MOVC A, @A+PC
  - 2) DIV AB
  - 3) JNB 00h, relative address.
  - 4) XCHD.
- b) Assuming Crystal frequency is of 12MHz, Write a assembly language program to generate square wave of 100Hz frequency on pin P1.3 using timer.
- c) State from which memory (External program /Internal program /Internal Data/External Data) Data will be transfer for following Underlined instructions. (Consider EA bar = 1 or +5v & A=00h)
- 1) MOV DPTR,#0EFFFh  
MOVC A,@A+DPTR
  - 2) MOV DPTR,#0030h  
MOVC A,@ A+DPTR
  - 3) MOV DPTR,#3FFFH  
MOVX A,@DPTR
  - 4) MOV R1,8
- d) Explain the SFRs associated with the interrupt structure of 8051.

**Q.3 Solve any two.** **16**

- a) Explain timer module with GATE input bit and INTx pin. Also explain in detail all modes of timer of Microcontroller 8051.
- b) Draw interfacing Diagram and Write a program to display data "SUS Solapur" on 16x2 LCD Display.
- c) Draw Interfacing of 4\*4 matrix keyboard & 7 segment display to 8051 and Write ALP to display on Seven segment display no. (From 0-f) pressed on 4\*4 Matrix keyboard.

**Section – II**

**Q.4 Solve any three.** **12**

- a) Explain the following instructions.
  - 1) Clrwdt
  - 2) Incfsz
- b) Give the steps to be followed for doing A/D conversion in PIC16F877.
- c) Explain the memory organization of PIC 16F877.
- d) Explain and give necessity of Brown out reset and Watch Dog Timer in embedded system.

**Q.5 Solve any two.**

- a) Explain CCP1 module, how it is used for compare function along with Timer1?
- b) Explain different addressing modes of PIC. Write assembly language program for addition of two 16 bit numbers.
- c) Explain in detail I<sup>2</sup>C bus for PIC16F877.

- c) Draw Interfacing of 4\*4 matrix keyboard & 7 segment display to 8051 and Write ALP to display on Seven segment display no. (From 0-f) pressed on 4\*4 Matrix keyboard.

**Section – II**

**Q.4 Solve any three.** **12**

- a) Explain the following instructions.
  - 1) `Clrwdt`
  - 2) `Incfsz`
- b) Give the steps to be followed for doing A/D conversion in PIC16F877.
- c) Explain the memory organization of PIC 16F877.
- d) Explain and give necessity of Brown out reset and Watch Dog Timer in embedded system.

**Q.5 Solve any two.**

- a) Explain CCP1 module, how it is used for compare function along with Timer1?
- b) Explain different addressing modes of PIC. Write assembly language program for addition of two 16 bit numbers.
- c) Explain in detail I<sup>2</sup>C bus for PIC16F877.

**MICROCONTROLLERS AND APPLICATIONS**

Day & Date: Saturday, 23-11-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.  
2) Use of non programmable Calculator is allowed.  
3) Assume Suitable Data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** **14**

- 1) Special Purpose Registers of PIC 16F877 are mapped into data space at \_\_\_\_\_.  
a) 00H-1FH  
b) 80H - 9FH  
c) both a & b  
d) none of these
- 2) The Vref for ADC in PIC is selected by \_\_\_\_\_ register.  
a) ADCONO  
b) ADCON1  
c) ADRES  
d) PIR1
- 3) The timer used for capture, compare and PWM mode respectively are \_\_\_\_\_.  
a) Timer 0, Timer 1, Timer 2  
b) Timer 2, Timer 1 , Timer 0  
c) Timer 1, Timer 1, Timer 2  
d) Timer 2, Timer 1, Timer 1
- 4) PIR1 register contains \_\_\_\_\_ and PIE1 contains \_\_\_\_\_ bits.  
a) Interrupt Priority, Interrupt Enable  
b) Interrupt Flag, Interrupt Priority  
c) Interrupt Priority, Interrupt Flag  
d) Interrupt Flag, Interrupt Enable
- 5) PSA (Prescaler assignment) bit in the option register equals to 1 then \_\_\_\_\_.  
a) Prescaler enabled  
b) Prescaler disabled  
c) Prescaler assigned to WDT  
d) Prescaler assigned to TIMERO
- 6) SJMP instruction is \_\_\_\_\_ byte instruction.  
a) 1  
b) 2  
c) 3  
d) none
- 7) In the 8051, control can be transferred anywhere within the \_\_\_\_\_ K bytes of, code space if using the LCALL instruction.  
a) 8  
b) 16  
c) 32  
d) 64
- 8) In 8051, SP register is \_\_\_\_\_ bit wide.  
a) 8  
b) 16  
c) 32  
d) none

- 9) What is the address of DPL \_\_\_\_\_.
- |        |        |
|--------|--------|
| a) 83H | b) 82H |
| c) 81H | d) 88H |
- 10) In microcontroller & LCD interface, which line will instruct the LCD that microcontroller sending a data or command?
- |        |       |
|--------|-------|
| a) DB0 | b) RW |
| c) EN  | d) RS |
- 11) What are the address of SFR's IE, IP, PSW & TH 0 respectively?
- |                     |                     |
|---------------------|---------------------|
| a) 99h,88h,90h,81h  | b) 87h,d 0h,8bh,8ch |
| c) a8h,b8h,d 0h,8ch | d) 98h,89h,d 0h,8ah |
- 12) Out of following registers, which register is not bit addressable register?
- |         |         |
|---------|---------|
| a) PSW  | b) TCON |
| c) SBUF | d) IE   |
- 13) Which of the following FSR is used for indirect addressing mode of PIC?
- |           |           |
|-----------|-----------|
| a) INTCON | b) INDF   |
| c) PCL    | d) STATUS |
- 14) The PIC actually uses a \_\_\_\_\_ program counter.
- |           |           |
|-----------|-----------|
| a) 12 bit | b) 13 bit |
| c) 14 bit | d) 15 bit |

Electronics & Telecommunication Engineering  
MICROCONTROLLERS AND APPLICATIONS**

Day & Date: Saturday, 23-11-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

**Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full marks.

**Section – I**

**Q.2 Solve any three.** **12**

- a) Explain following instructions.
- 1) MOVC A, @A+PC
  - 2) DIV AB
  - 3) JNB 00h, relative address.
  - 4) XCHD.
- b) Assuming Crystal frequency is of 12MHz, Write a assembly language program to generate square wave of 100Hz frequency on pin P1.3 using timer.
- c) State from which memory (External program /Internal program /Internal Data/External Data) Data will be transfer for following Underlined instructions. (Consider EA bar = 1 or +5v & A=00h)
- 1) MOV DPTR,#0EFFFh  
MOVC A,@A+DPTR
  - 2) MOV DPTR,#0030h  
MOVC A,@ A+DPTR
  - 3) MOV DPTR,#3FFFH  
MOVX A,@DPTR
  - 4) MOV R1,8
- d) Explain the SFRs associated with the interrupt structure of 8051.

**Q.3 Solve any two.** **16**

- a) Explain timer module with GATE input bit and INTx pin. Also explain in detail all modes of timer of Microcontroller 8051.
- b) Draw interfacing Diagram and Write a program to display data "SUS Solapur" on 16x2 LCD Display.
- c) Draw Interfacing of 4\*4 matrix keyboard & 7 segment display to 8051 and Write ALP to display on Seven segment display no. (From 0-f) pressed on 4\*4 Matrix keyboard.

**Section – II**

**Q.4 Solve any three.** **12**

- a) Explain the following instructions.
  - 1) Clrwdt
  - 2) Incfsz
- b) Give the steps to be followed for doing A/D conversion in PIC16F877.
- c) Explain the memory organization of PIC 16F877.
- d) Explain and give necessity of Brown out reset and Watch Dog Timer in embedded system.

**Q.5 Solve any two.**

- a) Explain CCP1 module, how it is used for compare function along with Timer1?
- b) Explain different addressing modes of PIC. Write assembly language program for addition of two 16 bit numbers.
- c) Explain in detail I<sup>2</sup>C bus for PIC16F877.

 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) SCR is used in \_\_\_\_\_.  
 a) Voltage control applications      b) high voltage  
 c) high frequency                      d) None
- 2) SCR is a \_\_\_\_\_ device.  
 a) PNPN                                      b) NNNP  
 c) PPPN                                      d) NPNP
- 3) Fan regulator is based on \_\_\_\_\_.  
 a) DC voltage controlling              b) AC voltage controlling  
 c) Both a and b                          d) None
- 4) TRIAC is antiparallel arrangement of \_\_\_\_\_.  
 a) Diodes                                      b) SCR  
 c) Transistors                              d) None
- 5) In frequency synthesizer \_\_\_\_\_ IC is used.  
 a) IC 1596                                      b) IC 565  
 c) CD 4046                                  d) None
- 6) Timer is designed using \_\_\_\_\_.  
 a) XR 2240                                      b) PT 100  
 c) LM394                                      d) 1 N4007
- 7) PLC exchanges information via \_\_\_\_\_.  
 a) Cables                                      b) Sensors  
 c) Input and output modules              d) Output device
- 8) DC Drive is based on \_\_\_\_\_.  
 a) Phase angle control                      b) Frequency control  
 c) time control                                d) none
- 9) IC 74C926 is used for \_\_\_\_\_.  
 a) Event counting                              b) Time  
 c) Time and event                              d) None

- 10) XR2240 consists of \_\_\_\_\_.  
a) 8 bit programmable counter      b) 4 bit programmable counter  
c) 8 digit programmable counter    d) 4 digit programmable counter
- 11) Diac contains \_\_\_\_\_ diodes.  
a) 1                                              b) 2  
c) 3                                              d) 4
- 12) Triac contains \_\_\_\_\_ diodes.  
a) 1                                              b) 2  
c) 3                                              d) None
- 13) Timer counter is designed by \_\_\_\_\_ IC.  
a) IC XR 2240                                b) 74C96  
c) Both a and b                              d) None
- 14) IC 1596 is used for \_\_\_\_\_.  
a) Modulation                                b) Demodulation  
c) Both a and b                              d) None

- Instructions:** 1) All Questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

- Q.2 Attempt any three of the following questions. 12**
- a) Explain construction and working of SCR.
  - b) Explain difference between FSK demodulator and PSK demodulator.
  - c) Explain design of frequency synthesizer using LM 565 and CD 4046.
  - d) Compare between TRIAC and DIAC.
- Q.3 Attempt any one of the following questions. 08**
- a) Explain the AC power controlling with DIAC and TRIAC with suitable examples.
  - b) Explain VI characteristics of DIAC and TRIAC.
- Q.4 What are the different Commutation techniques of SCR? Also explain firing circuits of SCR. 08**

**Section – II**

- Q.5 Attempt any three of the following questions. 12**
- a) Explain in detail J and K type Thermocouple.
  - b) Explain design of counter using IC74C926.
  - c) What is on/off and Propotional Control? Explain in brief.
  - d) Differentiate between V to V, I to V and V to I converter.
- Q.6 Attempt any one of the following questions. 08**
- a) Explain PLC architecture and Applications.
  - b) Write short note on bottle filling plant and elevator control.
- Q.7 Explain design procedure for 3.5 digit multirange digital voltmeter. 08**

**Set S**

**T.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
ELECTRONICS APPLICATIONS & SYSTEM DESIGN**

Day & Date: Monday, 25-11-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All Questions are compulsory.  
2) Figures to the right indicate full marks.  
3) Assume suitable data if necessary.

**Section – I**

- Q.2 Attempt any three of the following questions. 12**
- a) Explain construction and working of SCR.
  - b) Explain difference between FSK demodulator and PSK demodulator.
  - c) Explain design of frequency synthesizer using LM 565 and CD 4046.
  - d) Compare between TRIAC and DIAC.
- Q.3 Attempt any one of the following questions. 08**
- a) Explain the AC power controlling with DIAC and TRIAC with suitable examples.
  - b) Explain VI characteristics of DIAC and TRIAC.
- Q.4 What are the different Commutation techniques of SCR? Also explain firing circuits of SCR. 08**

**Section – II**

- Q.5 Attempt any three of the following questions. 12**
- a) Explain in detail J and K type Thermocouple.
  - b) Explain design of counter using IC74C926.
  - c) What is on/off and Propotional Control? Explain in brief.
  - d) Differentiate between V to V, I to V and V to I converter.
- Q.6 Attempt any one of the following questions. 08**
- a) Explain PLC architecture and Applications.
  - b) Write short note on bottle filling plant and elevator control.
- Q.7 Explain design procedure for 3.5 digit multirange digital voltmeter. 08**

**T.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**OPTICAL COMMUNICATION**

Day & Date: Tuesday, 26-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Objective paper should be returned in first 30 minutes.  
 2) Figures to the right indicates full marks.  
 3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** **14**

- 1) Intrinsic absorption is \_\_\_\_\_ in ultra violet portion of electromagnetic spectrum as compared to visible and infrared portion.
  - a) same
  - b) very weak
  - c) very strong
  - d) none of these
- 2) As compared to multimode step index fiber, a step index fiber has a \_\_\_\_\_ intermodal dispersion.
  - a) High
  - b) Low
  - c) Same
  - d) None of these
- 3) A multimode graded index fiber has a total pulse broadening of 0.2  $\mu$ s over a distance of 15 km. Then the pulse dispersion per unit length is \_\_\_\_\_
  - a) 6.67 ns km<sup>-1</sup>
  - b) 13.34 ns km<sup>-1</sup>
  - c) 0.133 ns km<sup>-1</sup>
  - d) 0.266 ns km<sup>-1</sup>
- 4) Which of the following fiber manufacturing techniques can be used to draw fiber continuously?
  - a) Vapour Axial Deposition
  - b) Modified chemical deposition technique
  - c) Plasma activated chemical deposition technique
  - d) b and c above
- 5) A fiber splice is a \_\_\_\_\_ joint formed between two individual optical fibers in field or factory.
  - a) Permanent
  - b) Temporary
  - c) Permanent or Temporary
  - d) None of the above
- 6) An anisotype heterojunction is a \_\_\_\_\_ junction.
  - a) n-n
  - b) p-p
  - c) p-n
  - d) a & b above
- 7) Which of the following is an advantage of a plastic optical fiber as compared to glass fiber?
  - a) Reduced requirement for a buffer jacket
  - b) Cheaper to produce
  - c) Easier to handle
  - d) All of the above

**T.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
OPTICAL COMMUNICATION**

Day &amp; Date: Tuesday, 26-11-2019

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

**Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full mark.

**Section – I****Q.2 Solve any three of the followings. 12**

- Determine the cutoff wavelength of a step index fiber to exhibit single mode operation when the core refractive index and radius are 1.46 and  $4.5\mu\text{m}$ , respectively, with the relative index difference being 0.25 %
- A multimode graded index fiber exhibits total pulse broadening of  $0.1\ \mu\text{s}$  over a distance of 15 km. Estimate:
  - the maximum bandwidth on the link assuming no intersymbol interference.
  - the pulse dispersion per unit length
- Explain snug tube and V groove mechanical splices.
- Write a note on index guided LASERs.

**Q.3 Solve any two of the followings. 16**

- Explain the following terms
  - Total internal reflection
  - Acceptance angle
  - Numerical aperture
  - Skew ray
- Compare different vapour phase deposition techniques with reference to reaction type, depositional direction and refractive index profile formation.
- Why heterojunctions are preferred in an injection LASER? Explain the operation of a double heterojunction injection LASER with help of energy band diagram.

**Section – II****Q.4 Solve any three of the followings. 12**

- Explain the working of surface emitter LED.
- Explain the working principle of phototransistor.
- Explain the receiver design for optical communication.
- Explain briefly the cut off wavelength measurements.

**Q.5 Solve any two of the followings. 16**

- When  $10^{11}$  photons per second each with an energy of  $1.28 \times 10^{-19}\text{J}$  are incident on an ideal photodiode, calculate:
  - the wavelength of the incident radiation
  - the output photocurrent
  - the output photocurrent if the device is an APD with a multiplication factor of 18.
- Compare LED with Laser based on principle, construction, advantages and disadvantages.
- Explain FDDI network.

3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** 14

- Responsivity of photo diode is expressed in \_\_\_\_\_.  
a)  $A/W$                                                       b)  $A \cdot W$   
c)  $W/A$                                                       d)  $A^2 \cdot W$
- Speed of response of detector is limited by \_\_\_\_\_.  
a) drift time of carrier through the carrier through depletion region  
b) diffusion time of the carrier generated outside the depletion region  
c) time constant incurred by the capacitance of photodiode with its load  
d) all the above
- Transmission of multiple optical signals over same fiber is used \_\_\_\_\_.  
a) to increase the transmission capacity of the fiber  
b) to increase the core diameter of the fiber  
c) to increase the cladding diameter of the fiber  
d) none of the above
- Interferometric technique is used to measure \_\_\_\_\_.  
a) Dispersion                                                      b) Numerical aperture  
c) Refractive index profile                                      d) Total attenuation
- Frequency domain measurements is the preferred method for acquiring the \_\_\_\_\_ of multimode optical fibers.  
a) Bandwidth                                                      b) Frequency  
c) Dispersion                                                      d) Wavelength
- WDM means \_\_\_\_\_.  
a) Wave Division Multiplexing  
b) Wavelength Division Multiplexing  
c) Width Division Multiplexing  
d) None of the above
- A photodiode has a quantum efficiency of 70% when photons of energy  $1.8 \times 10^{-19} J$  are incident upon it, then the responsivity of the photodiode is \_\_\_\_\_.  
a) 0.694                                                      b) 0.723  
c) 0.369                                                      d) 0.623

- 8) Intrinsic absorption is \_\_\_\_\_ in ultra violet portion of electromagnetic spectrum as compared to visible and infrared portion.  
a) same  
b) very weak  
c) very strong  
d) none of these
- 9) As compared to multimode step index fiber, a step index fiber has a \_\_\_\_\_ intermodal dispersion.  
a) High  
b) Low  
c) Same  
d) None of these
- 10) A multimode graded index fiber has a total pulse broadening of  $0.2 \mu\text{s}$  over a distance of 15 km. Then the pulse dispersion per unit length is \_\_\_\_\_  
a)  $6.67 \text{ ns km}^{-1}$   
b)  $13.34 \text{ ns km}^{-1}$   
c)  $0.133 \text{ ns km}^{-1}$   
d)  $0.266 \text{ ns km}^{-1}$
- 11) Which of the following fiber manufacturing techniques can be used to draw fiber continuously?  
a) Vapour Axial Deposition  
b) Modified chemical deposition technique  
c) Plasma activated chemical deposition technique  
d) b and c above
- 12) A fiber splice is a \_\_\_\_\_ joint formed between two individual optical fibers in field or factory.  
a) Permanent

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Advantage of using Dynamic channel assignment is \_\_\_\_\_.
  - a) Blocking is reduced
  - b) Capacity of the system is increased
  - c) Both a & b
  - d) None of the above
- 2) Trunking in a cellular network refers to \_\_\_\_\_.
  - a) Termination of a call
  - b) Spectrum unavailability
  - c) Accommodating large numbers of users in limited spectrum
  - d) All of the above
- 3) Co-channel reuse ratio for cluster size 12 is \_\_\_\_\_.
 

|      |      |
|------|------|
| a) 4 | b) 5 |
| c) 6 | d) 7 |
- 4) Friis free space equation \_\_\_\_\_.
  - a) Is an expression for noise power
  - b) Is a function of transmitting and receiving antenna gain
  - c) Depends upon the distance between transmitting and receiving antenna.
  - d) Both b & c
- 5) \_\_\_\_\_ is the Time Dispersion Parameter.
 

|                        |                      |
|------------------------|----------------------|
| a) RMS delay spread    | b) Mean excess delay |
| c) Excess delay spread | d) All of above      |
- 6) Data transmission for users of a \_\_\_\_\_ system is not continuous, but occurs in bursts.
 

|         |         |
|---------|---------|
| a) FDMA | b) TDMA |
| c) SDMA | d) SSMA |
- 7) \_\_\_\_\_ requires tight RF filtering to minimize adjacent channel interference.
 

|         |         |
|---------|---------|
| a) FDMA | b) TDMA |
| c) SDMA | d) SSMA |
- 8) Carrier Separation in Primary GSM system is of \_\_\_\_\_.
 

|            |            |
|------------|------------|
| a) 200 KHz | b) 300 KHz |
| c) 400 KHz | d) 500 KHz |

- 9) In GSM one hyperframe is made of \_\_\_\_\_.  
a) 2048 superframes                      b) 2048 mutiframes  
c) 2084 superframes                      d) 2084 mutiframes
- 10) The standard interface that connects a MS to BTS is called the \_\_\_\_\_ interface.  
a) Um                                              b) A-bis  
c) A                                                d) D
- 11) The \_\_\_\_\_ channel is used for sending short message including broadcast message.  
a) Forward traffic                              b) Sync  
c) Paging                                        d) Pilot
- 12) In IS-95 CDMA forward channel bandwidth is of \_\_\_\_\_.  
a) 1.25 MHz                                      b) 1.40 MHz  
c) 2 MHz                                         d) 3 MHz
- 13) The channel bandwidth in W-CDMA is \_\_\_\_\_.  
a) 5 MHz                                         b) 4 MHz  
c) 2 MHz                                         d) 1.5 MHz
- 14) The data modulation used in forward channel in W-CDMA system is \_\_\_\_\_.  
a) BPSK                                         b) QPSK  
c) Dual Channel QPSK                        d) OQPSK

**T.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
MOBILE COMMUNICATION**

Day & Date: Wednesday, 27-11-2019

Max. Marks: 56

Time: 10:00 AM To 01:00 PM

- Instructions:** 1) All questions are compulsory.  
2) Figure to the right indicates full marks.

**Section – I**

**Q.2 Attempt any three of the following questions. 12**

- a) Explain frequency reuse concept in cellular systems.
- b) Explain Umbrella cell approach.
- c) Explain log-distance path loss model and log-normal shadowing.
- d) What is diversity? Explain in detail.
- e) Write a note on Space Division Multiple Access (SDMA).

**Q.3 Attempt any two of the following questions. 16**

- a) Explain different methods used to improve capacity of cellular systems.
- b) Elaborate the free space propagation model.
- c) Explain frame structure, features, efficiency and number of channels in TDMA system.

**Section – II**

**Q.4 Attempt any three of the following questions. 12**

- a) Write a note on GPRS.
- b) Describe the types of Handoff in GSM.
- c) Explain GSM frame hierarchy.
- d) Explain pilot channel, sync channel and paging channels in IS-95 CDMA system.
- e) Explain reverse channel in W-CDMA.

**Q.5 Attempt any two of the following questions. 16**

- a) Give the detail comparison of IS-95, WCDMA and CDMA 2000.
- b) Explain in detail GSM protocol architecture.
- c) Explain with neat block diagram Access channel processing and reverse traffic channel processing in IS-95 CDMA system.

- 10) Co-channel reuse ratio for cluster size 12 is \_\_\_\_\_.  
a) 4                                          b) 5  
c) 6                                          d) 7
- 11) Friis free space equation \_\_\_\_\_.  
a) Is an expression for noise power  
b) Is a function of transmitting and receiving antenna gain  
c) Depends upon the distance between transmitting and receiving antenna.  
d) Both b & c
- 12) \_\_\_\_\_ is the Time Dispersion Parameter.  
a) RMS delay spread                      b) Mean excess delay  
c) Excess delay spread                  d) All of above
- 13) Data transmission for users of a \_\_\_\_\_ system is not continuous, but occurs in bursts.  
a) FDMA                                      b) TDMA  
c) SDMA                                      d) SSMA
- 14) \_\_\_\_\_ requires tight RF filtering to minimize adjacent channel interference.  
a) FDMA                                      b) TDMA  
c) SDMA                                      d) SSMA

Day & Date: Thursday, 28-12-2019  
 Time: 10:00 AM To 12:00 PM

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 20 minutes in answer book.  
 2) Answer MCQ Objective type questions on Page No. 3 only  
 3) Figures to right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** **10**

- 1) The addressing mode, where operand value is directly specified is called \_\_\_\_\_.
 

|              |             |
|--------------|-------------|
| a) Immediate | b) Direct   |
| c) Definite  | d) Relative |
- 2) Which representation is most efficient to perform arithmetic operations?
 

|                    |                    |
|--------------------|--------------------|
| a) Sign magnitude  | b) 1's complements |
| c) 2's complements | d) None of these   |
- 3) Which register points to the first instruction to be executed when the processor starts.
 

|                  |                         |
|------------------|-------------------------|
| a) Accumulator   | b) Program counter      |
| c) Data register | d) Instruction register |
- 4) Speedup techniques of computer include \_\_\_\_\_.
 

|                |                 |
|----------------|-----------------|
| a) cache       | b) pipeline     |
| c) superscalar | d) all of these |
- 5) Floating point representation consist of \_\_\_\_\_.
 

|                   |                  |
|-------------------|------------------|
| a) Mantissa       | b) exponent      |
| c) Both a) and b) | d) none of these |
- 6) To read the control words sequentially \_\_\_\_\_ is used.
 

|        |                  |
|--------|------------------|
| a) PC  | b) IR            |
| c) uPC | d) None of these |
- 7) Data used with assembly language instruction in processors are nothing but \_\_\_\_\_.
 

|             |                  |
|-------------|------------------|
| a) Opcode   | b) Operand       |
| c) Register | d) None of these |
- 8) In Processor DMA Stand for \_\_\_\_\_.
 

|                          |                           |
|--------------------------|---------------------------|
| a) Direct Memory Access  | b) Division Memory Access |
| c) Direct mapping Access | d) All of the above       |

- 9) What is not true about RISC?
- |                                 |                            |
|---------------------------------|----------------------------|
| a) Large no of addressing modes | b) Simple instruction      |
| c) Hardwired control unit       | d) A single chip processor |
- 10) To interface 2048 bytes of memory, how many address lines are required?
- |       |       |
|-------|-------|

 2) Answer MCQ Objective type questions on Page No. 3 only  
 3) Figures to right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** **10**

- 1) What is not true about RISC?
 

|                                 |                            |
|---------------------------------|----------------------------|
| a) Large no of addressing modes | b) Simple instruction      |
| c) Hardwired control unit       | d) A single chip processor |
- 2) To interface 2048 bytes of memory, how many address lines are required?
 

|       |       |
|-------|-------|
| a) 8  | b) 9  |
| c) 10 | d) 11 |
- 3) The addressing mode, where operand value is directly specified is called \_\_\_\_\_.
 

|              |             |
|--------------|-------------|
| a) Immediate | b) Direct   |
| c) Definite  | d) Relative |
- 4) Which representation is most efficient to perform arithmetic operations?
 

|                    |                    |
|--------------------|--------------------|
| a) Sign magnitude  | b) 1's complements |
| c) 2's complements | d) None of these   |
- 5) Which register points to the first instruction to be executed when the processor starts.
 

|                  |                         |
|------------------|-------------------------|
| a) Accumulator   | b) Program counter      |
| c) Data register | d) Instruction register |
- 6) Speedup techniques of computer include \_\_\_\_\_.
 

|                |                 |
|----------------|-----------------|
| a) cache       | b) pipeline     |
| c) superscalar | d) all of these |
- 7) Floating point representation consist of \_\_\_\_\_.
 

|                   |                  |
|-------------------|------------------|
| a) Mantissa       | b) exponent      |
| c) Both a) and b) | d) none of these |
- 8) To read the control words sequentially \_\_\_\_\_ is used.
 

|        |                  |
|--------|------------------|
| a) PC  | b) IR            |
| c) uPC | d) None of these |
- 9) Data used with assembly language instruction in processors are nothing but \_\_\_\_\_.
 

|             |                  |
|-------------|------------------|
| a) Opcode   | b) Operand       |
| c) Register | d) None of these |

- 10) In Processor DMA Stand for \_\_\_\_\_.
- a) Direct Memory Access
  - b) Division Memory Access
  - c) Direct mapping Access
  - d) All of the above

**T.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**COMPUTER ORGANIZATION**

Day & Date: Thursday, 28-12-2019  
Time: 10:00 AM To 12:00 PM

Max. Marks: 40

**Instructions:** 1) Attempt any four questions from Q. No.2.  
2) Figures to right indicate full marks.

**Q.2 Attempt any four (each 10 marks)**

**40**

- a) Write note Virtual memory system.
- b) Explain instruction set formats in detail.
- c) Explain CISC and RISC Architecture in detail.
- d) Explain GCD processor hardwired control unit.
- e) Explain memory allocation schemes in details.
- f) Explain in detail cache memory organization.

OPERATING SYSTEM**

Day & Date: Thursday, 28-11-2019  
Time: 10:00 AM To 12:00 PM

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 20 minutes in answer book.  
2) Figures to the right indicate full marks.  
3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 10**

- 1) Process is \_\_\_\_\_.
  - a) program in High level language kept on disk
  - b) contents of main memory
  - c) a program in execution
  - d) a job in secondary memory
- 2) The strategy of allowing processes that are logically runnable to be temporarily suspended is called \_\_\_\_\_.
  - a) preemptive scheduling
  - b) non preemptive scheduling
  - c) Shortest job first
  - d) first come first served
- 3) A non-relocatable program is one which \_\_\_\_\_.
  - a) cannot be made to execute in any area of storage other than the one designated for it at the time of its coding or translation.
  - b) consists of a program and relevant information for its relocation.
  - c) can itself performs the relocation of its address-sensitive portions.
  - d) all of the above
- 4) Operating system \_\_\_\_\_.
  - a) links a program with the subroutines it references
  - b) provides a layered, user-friendly interface
  - c) enables the programmer to draw a flowchart
  - d) all of the above
- 5) Which of the following is not true about the memory management?
  - a) virtual memory is used only in multi-user systems
  - b) segmentation suffers from external fragmentation
  - c) paging suffers from internal fragmentation
  - d) segmented memory can be paged
- 6) Which of the following is characteristic of an operating system?
 

|                        |                   |
|------------------------|-------------------|
| a) resource management | b) error recovery |
| c) memory management   | d) All the above  |
- 7) A thread is a \_\_\_\_\_.
 

|            |                         |
|------------|-------------------------|
| a) Task    | b) Process              |
| c) Program | d) Light weight process |

- 8) In \_\_\_\_\_ the processes under consideration must be independent: that is, the order in which they execute must be unconstrained by any synchronization requirements.
- |                        |                       |
|------------------------|-----------------------|
| a) deadlock prevention | b) deadlock avoidance |
| c) deadlock detection  | d) deadlock deletion  |
- 9) In almost all modern multi programming systems, principal operation of memory management involves a sophisticated scheme known as \_\_\_\_\_.
- |                        |                        |
|------------------------|------------------------|
| a) memory partitioning | b) virtual memory      |
| c) real memory         | d) memory organization |
- 10) To access the services of operating system, the interface is provided by the \_\_\_\_\_.
- |                 |                          |
|-----------------|--------------------------|
| a) System calls | b) API                   |
| c) library      | d) Assembly instructions |

**Q.2 Attempt any four of the following questions.**

**40**

- a) Why we need the operating system? Explain following types of operating system
  - 1) Time sharing system
  - 2) Real time system
- b) What do you mean by process in operating system? List different process States and explain it with the help of diagram of process state transitions.
- c) Draw and explain queuing diagram representation of process scheduling, what is the difference between long term scheduler and short term scheduler?
- d) What are necessary conditions for deadlock situation? Explain resource allocation graph with dead lock.
- e) Discuss in detail paging as memory management scheme.

**T.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ROBOTICS**

Day & Date: Thursday, 28-11-2019  
 Time: 10:00 AM To 12:00 PM

Max. Marks: 50

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 20 minutes in answer Book.  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 20 Minutes

Marks: 10

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 10**

- 1) Which of the following is a sensor that measures the movement of an object?
  - a) Pressure sensor
  - b) Motion sensor
  - c) Action sensor
  - d) Touch sensor
- 2) The common robotic arm has \_\_\_\_\_ degrees of freedom.
  - a) Six
  - b) Five
  - c) Four
  - d) Three
- 3) The process of extracting, characterizing and interpreting information from images of 3 D world is referred as \_\_\_\_\_.
  - a) Robot vision
  - b) Robochar
  - c) Robo 3D
  - d) Roboextract
- 4) Robotic vehicles are used in \_\_\_\_\_.
  - a) Remotely operated communication systems
  - b) Space vehicles
  - c) Undersea exploration
  - d) All of the above
- 5) Programming of a robot can be done by \_\_\_\_\_.
  - a) Force sensors
  - b) Teach pendant programming
  - c) Tactile sensors
  - d) Touch sensors
- 6) The main objective(s) of Industrial robot is to \_\_\_\_\_.
  - a) To minimise the labour requirement
  - b) To increase productivity
  - c) To enhance the life of production machines
  - d) All of the above
- 7) The following sensor can detect nearby objects \_\_\_\_\_.
  - a) Touch sensor
  - b) Humidity sensor
  - c) Proximity sensor
  - d) Pressure sensor
- 8) A robot is a \_\_\_\_\_.
  - a) multifunctional and reprogrammable manipulator
  - b) unifunctional and reprogrammable manipulator
  - c) multifunctional and non-programmable manipulator
  - d) unifunctional and non-programmable manipulator

- 9) \_\_\_\_\_ can be used to measure the distance from a reference to the object in the field.
- |                 |                    |
|-----------------|--------------------|
| a) Force sensor | b) Pressure sensor |
| c) Range sensor | d) Torque sensor   |
- 10) The speed regulation is good in \_\_\_\_\_.
- |                                        |
|----------------------------------------|
| a) Series wound motor                  |
| b) Shunt wound motor                   |
| c) Can be series wound or shunt wound. |
| d) None of the above                   |

**B.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
COMPUTER COMMUNICATION NETWORK**

Day & Date: Saturday, 07-12-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Figure to the right indicates full marks.

**Section – I**

- Q.2 Solve any three.** **12**
- Explain the bit stuffing method of framing with suitable example.
  - If message to be transmitted is 1101011011 and  $G(x) = X^4 + X + 1$ . What is the transmitted bit pattern according to CRC?
  - What is layered architecture? Draw OSI model with function of each layer in brief.
  - Explain different classes of IP addresses along with their address ranges.
- Q.3 Solve Any two.** **16**
- What is subnet masking? Explain with suitable example. If a router inside an organization receives some packet with destination address 190.240.33.91/19 find the subnet work address to route the packet.
  - Draw TCP header format and explain each field.
  - Write a note on.
    - Star Topology
    - Stop and wait protocol

**Section – II**

- Q.4 Solve any three.** **12**
- Write a short note on IEEE 802.4.
  - Explain shortest path routing with an example.
  - What are Gateways? Explain its function.
  - Write a short note on IPv6.
- Q.5 Solve any two.** **16**
- Explain ICMP along with its any 4 different message types.
  - Write a note on.
    - Repeaters
    - Routers
  - What is Internet Domain Name System? Explain domain name space and domain name sections.

- 10) The process-to-process delivery of the entire message is the responsibility of the \_\_\_\_\_ layer.
- a) Transport
  - b) Application
  - c) Physical
  - d) Network
- 11) HDLC is an acronym for \_\_\_\_\_.
- a) Half-duplex digital link combination
  - b) Host double-level circuit
  - c) High-duplex line communication
  - d) High-level data link control
- 12) The hamming distance between dataword, 110101 and 100010 is \_\_\_\_\_.
- a) 3
  - b) 4
  - c) 2
  - d) 1
- 13) Urgent data requires the urgent pointer field as well as the URG bit in the \_\_\_\_\_ field.
- a) Control
  - b) Offset
  - c) Sequence number
  - d) None
- 14) To accomplish flow control, TCP uses a \_\_\_\_\_ window protocol.
- a) limited-size
  - b) Sliding
  - c) fixed-size
  - d) None

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The bridge is suitable at \_\_\_\_\_ layer of OSI reference model.
  - a) Application
  - b) Transport
  - c) Data-link
  - d) Network
- 2) \_\_\_\_\_ is a Network device, used for repackage and convert data going from one environment to another.
  - a) Router
  - b) Gateway
  - c) Repeater
  - d) Switch
- 3) The formal protocol that defines the MTA client and server in the Internet is called \_\_\_\_\_.
  - a) Systematic mail transfer protocol
  - b) Simple mail transfer protocol
  - c) DHCP
  - d) None of the above
- 4) \_\_\_\_\_ provide both static and dynamic address allocation which can be manual / automated.
  - a) SMTP
  - b) DHCP
  - c) TELNET
  - d) ICMP
- 5) The length of IPv6 is \_\_\_\_\_ bits.
  - a) 32
  - b) 64
  - c) 128
  - d) 16
- 6) Number of links to connect n nodes in a mesh topology is = \_\_\_\_\_.
  - a)  $N(N-1)/2$
  - b)  $N(N-2)$
  - c) N
  - d)  $N^2$

  - d) Explain different classes of IP addresses along with their address ranges.
- Q.3 Solve Any two.** **16**
- a) What is subnet masking? Explain with suitable example. If a router inside an organization receives some packet with destination address 190.240.33.91/19 find the subnet work address to route the packet.
  - b) Draw TCP header format and explain each field.
  - c) Write a note on.
    - 1) Star Topology
    - 2) Stop and wait protocol

**Section – II**

- Q.4 Solve any three.** **12**
- a) Write a short note on IEEE 802.4.
  - b) Explain shortest path routing with an example.
  - c) What are Gateways? Explain its function.
  - d) Write a short note on IPv6.
- Q.5 Solve any two.** **16**
- a) Explain ICMP along with its any 4 different message types.
  - b) Write a note on.
    - 1) Repeaters
    - 2) Routers
  - c) What is Internet Domain Name System? Explain domain name space and domain name sections.

**B.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
EMBEDDED SYSTEM DESIGN**

Day & Date: Tuesday, 10-12-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in first 30 minutes in answer book.  
2) Figures to the right indicate full marks.  
3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) LPC2148 has \_\_\_\_\_ on chip flash program memory.
  - a) 32 KB
  - b) 64 KB
  - c) 8 KB
  - d) 16 KB
- 2) Total number of available ADC inputs for LPC 2148 is \_\_\_\_\_.
  - a) 06
  - b) 08
  - c) 12
  - d) 14
- 3) In I<sup>2</sup>c standard mode, speed is given as \_\_\_\_\_.
  - a) 200 kbps
  - b) 400 kbps
  - c) 100 kbps
  - d) None of above
- 4) ARM 7 Architecture support total \_\_\_\_\_ interrupt sources.
  - a) 20
  - b) 30
  - c) 32
  - d) 10
- 5) Inter-task or inter process communication in *μcos* II RTOS takes place using \_\_\_\_\_.
  - a) Semaphore
  - b) Message mailbox
  - c) Message queues
  - d) All
- 6) \_\_\_\_\_ software is the part of kernel responsible for determining which task will run next.
  - a) Scheduler
  - b) Semaphore
  - c) Mailbox
  - d) Mutex
- 7) SWAP instruction in the instruction set of ARM processor is a special case of \_\_\_\_\_ instruction.
  - a) Arithmetic
  - b) Logical
  - c) Load-Store
  - d) Branch
- 8) Exception priorities are in the following descending order \_\_\_\_\_.
  - a) Reset, Data, Abort, FIQ, IRQ, Pre Fetch Abort, SWI or Undet
  - b) Reset, Data, Abort, FIQ, IRQ, Pre Fetch Abort, SWI and Undet
  - c) Reset, FIQ, IRQ, Data, Abort, Pre Fetch Abort, SWI or Undet
  - d) Not in fixed order

- 9) Which of the following VIC having the highest priority?  
a) Vectored interrupt request      b) Non vectored interrupt request  
c) Fast interrupt request      d) None of the above
- 10) A thread is a \_\_\_\_\_ process.  
a) Multi process      b) Inter thread process  
c) Light weight      d) None of above
- 11) Round robin scheduling \_\_\_\_\_.  
a) Allows interactive task quicker access to processor  
b) Is quite complex to implement  
c) Gives each task the same chance at the processor  
d) None of above
- 12) The FIFO algorithm \_\_\_\_\_.  
a) Execute first the job that last entered the queue  
b) Execute first the job that first entered the queue  
c) Execute first the job that has been in the queue the longest  
d) None of above
- 13) Inter process can be done through \_\_\_\_\_.  
a) Mails      b) Messages  
c) System calls      d) Trap
- 14) A binary semaphore \_\_\_\_\_.  
a) has value one or zero      b) is essential to binary commuter  
c) is used for synchronization      d) is used for mutual exclusion

**B.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**EMBEDDED SYSTEM DESIGN**

Day & Date: Tuesday, 10-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figure to the right indicates full marks.  
 3) Assume suitable data if necessary.

**Section – I**

- Q.2 Solve any Four. 16**
- a) Draw & explain Hardware architecture of embedded system.
  - b) What are the different applications of embedded system?
  - c) Write the features of LPC 2148.
  - d) Explain with code Interfacing of Relay to LPC 2148 in detail.
  - e) Explain the communication protocol I<sup>2</sup>C details.

- Q.3 Solve any Two. 12**
- a) Draw ARM core architecture & explain each block of ARM core architecture in detail.
  - b) Explain the following on chip peripherals of ARM 2148 in detail.  
RTC, WDT, PLL
  - c) Explain the communication protocol USB in details.

**Section – II**

- Q.4 Solve any Four. 16**
- a) What are the features of  $\mu\text{COS II}$  RTOS?
  - b) What is task scheduling? Explain various task scheduling algorithms.
  - c) Explain with code Interfacing of LED for LPC 2148 in detail.
  - d) Explain the concept of Semaphores with example.
  - e) Explain Round Robin architecture. States its advantages and disadvantage.

- Q.5 Solve any Two. 12**
- a) Write a short note on.
    - 1) Message queues and mailboxes
    - 2) Pipes
  - b) Explain in detail with neat diagrams Mobile Phones.
  - c) Explain with code Interfacing of DAC to LPC 2148 in detail.

Day & Date: Thursday, 12-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Apogee is \_\_\_\_\_.  
 a) The point farthest from the Earth  
 b) The point closest approach to the earth  
 c) The point on the earth surface  
 d) The point on the Equator
- 2) What is the application of satellite systems?  
 a) Weather forecasting                      b) Terrestrial communication  
 c) Point to Point communication      d) None of above
- 3) IN GPS which code has high accuracy?  
 a) C/A                                              b) P  
 c) Both a and b                                d) None of above
- 4) Bent pipe is a type of \_\_\_\_\_.  
 a) Waveguide                                    b) LNB  
 c) Transponder                                d) Antenna
- 5) The transmitter-receiver combination in the satellite is known as a \_\_\_\_\_.  
 a) Relay                                            b) Repeater  
 c) Transponder                                d) Duplexer
- 6) The downlink frequency is lower than the uplink frequency.  
 a) True                                            b) False
- 7) What is the reason for carrying multiple transponders in a satellite?  
 a) More number of operating channel  
 b) Better reception  
 c) More gain  
 d) Redundancy
- 8) Which of the following bands cannot be used for satellite communication?  
 a) MF                                              b) Ku  
 c) X                                                 d) C

**B.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**SATELLITE COMMUNICATION**

Day & Date: Thursday, 12-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

**Q.2 Attempt any four.** **16**

- a) A quasi-GEO satellite is in a circular orbit close to geosynchronous altitude. The quasi-GEO, satellite, however does not have a period of one sidereal day, its orbital period is exactly 24 h, i.e one solar day. Calculate
  - 1) The radius of the orbit.
  - 2) The rate of drift around the equator of the sub satellite point in degree per solar day.
  - 3) The satellite is drifting across the sky, is the satellite moving towards the east or towards the west.
- b) A satellite is at a distance of 40,000 km from a point on the earth's surface radiates a power of 10 W from an antenna with a gain of 17 dB in the direction of the observer. Find flux density at the receiving point, and the power received by the antenna at this point with an effective area of 10m<sup>2</sup>.
- c) Write a short note on development of satellite communication.
- d) Describe Attitude and Orbit Control System.
- e) Describe Uplink design.

**Q.3 Attempt any two.** **12**

- a) Explain Orbital perturbations, Launchers and Launch vehicles.
- b) Explain calculations for system noise temperature.
- c) Explain Communication subsystem of satellite.

**Section – II**

**Q.4 Attempt any four.** **16**

- a) Explain in detail RF Equipment for earth station.
- b) Explain Tropospheric and ionospheric Scintillations.
- c) What is GPS position location principle? Explain in detail.
- d) Describe in detail VSAT system.
- e) Explain Earth station testing.

**Q.5 Attempt any two.** **12**

- a) Explain earth station design considerations.
- b) Write a short note on Digital DBS TV.
- c) Explain different propagation effects in satellite communication.

Electronics & Telecommunication Engineering  
SATELLITE COMMUNICATION**

Day & Date: Thursday, 12-12-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
2) Figures to the right indicate full marks.  
3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Which of the following bands cannot be used for satellite communication?
 

|       |       |
|-------|-------|
| a) MF | b) Ku |
| c) X  | d) C  |
  
- 2) Assuming earth to be a sphere of radius 6400 km and height of a geosynchronous satellite above Earth as 36000 km, the velocity of a geosynchronous satellite is \_\_\_\_\_ km/hr.
 

|          |          |
|----------|----------|
| a) 28000 | b) 15000 |
| c) 36000 | d) 11100 |
  
- 3) To cover all inhabited regions of the Earth, the number of geosynchronous communication satellites required \_\_\_\_\_.
 

|       |      |
|-------|------|
| a) 5  | b) 3 |
| c) 10 | d) 2 |
  
- 4) A geosynchronous satellite \_\_\_\_\_.
 

|                                             |
|---------------------------------------------|
| a) has the same period as that of the Earth |
| b) has a circular orbit                     |
| c) rotates in the equatorial plane          |
| d) has all of the above                     |
  
- 5) Frequency range of C-Band is \_\_\_\_\_.
 

|              |             |
|--------------|-------------|
| a) 16-32 GHZ | b) 8-16 GHZ |
| c) 4-8 GHZ   | d) 1-2 GHZ  |
  
- 6) GPS satellites are \_\_\_\_\_ Satellites.
 

|        |                  |
|--------|------------------|
| a) GEO | b) MEO           |
| c) LEO | d) None of above |
  
- 7) The one way propagation time delay of MEO satellite is \_\_\_\_\_.
 

|          |            |
|----------|------------|
| a) 2.7ms | b) 34.5ms  |
| c) 110ms | d) 119.3ms |
  
- 8) Apogee is \_\_\_\_\_.
 

|                                            |
|--------------------------------------------|
| a) The point farthest from the Earth       |
| b) The point closest approach to the earth |
| c) The point on the earth surface          |
| d) The point on the Equator                |

- 9) What is the application of satellite systems?  
a) Weather forecasting                      b) Terrestrial communication  
c) Point to Point communication        d) None of above
- 10) IN GPS which code has high accuracy?  
a) C/A                                              b) P  
c) Both a and b                                d) None of above
- 11) Bent pipe is a type of \_\_\_\_\_.  
a) Waveguide                                    b) LNB  
c) Transponder                                d) Antenna
- 12) The transmitter-receiver combination in the satellite is known as a  
\_\_\_\_\_.  
a) Relay                                            b) Repeater  
c) Transponder                                d) Duplexer
- 13) The downlink frequency is lower than the uplink frequency.  
a) True                                              b) False
- 14) What is the reason for carrying multiple transponders in a satellite?  
a) More number of operating channel  
b) Better reception  
c) More gain  
d) Redundancy

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
2) Figures to the right indicate full marks.  
4) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) What is an Instance of a Database?
  - a) The logical design of the database system
  - b) The entire set of attributes of the Database
  - c) The state of the database system at any given point of time
  - d) The initial values inserted into the Database immediately after its creation
- 2) A command to remove a relation from an SQL database.
  - a) Delete Table <table name>
  - b) Drop Table <table name>
  - c) Erase Table <table name>
  - d) Alter Table <table name>
- 3)  $\sigma_{\text{year} > 2009}(\text{book} \bowtie \text{borrow})$  will \_\_\_\_\_.
  - a) Select all tuples from the Cartesian product of book and borrow
  - b) Select all tuples from the natural join of book and borrow where the year is greater than 2009
  - c) Select all the books which are borrowed after the year 2009
  - d) Both b) and c)
- 4) We apply the aggregate function to a group of sets of tuples using the \_\_\_\_\_ clause.
  - a) group by
  - b) Group
  - c) group set
  - d) group attribute
- 5) The operator that performs pattern matching is \_\_\_\_\_.
  - a) BETWEEN
  - b) EXISTS
  - c) LIKE
  - d) None of these
- 6) Which SQL command is used to sort the result set?
  - a) Sort by
  - b) Sort
  - c) Order
  - d) Order by
- 7) A transaction is in \_\_\_\_\_ state after the final statement has been executed.
  - a) Active
  - b) Committed
  - c) Partially Committed
  - d) None of these
- 8) The characteristic/s of transaction/s is/are \_\_\_\_\_.
  - a) Atomicity
  - b) Durability
  - c) Isolation
  - d) All the above

- 9) Collection of operations that form a single logical unit of work are called \_\_\_\_\_.
- a) Transaction
  - b) Data Commit
  - c) Data Rollback
  - d) Data Automation
- 10) The “all-or-none” property is commonly referred to as \_\_\_\_\_.
- a) Isolation
  - b) Atomicity
  - c) Durability
  - d) All the above
- 11) Two phase locking protocol ensures \_\_\_\_\_.
- a) Serializability
  - b) Freedom from deadlock
  - c) Cascadeless Schedule
  - d) None of these
- 12) A deadlock exists in the system if and only if the wait for graph contains a \_\_\_\_\_.
- a) Cycle
  - b) Direction
  - c) Rotation
  - d) Bi-direction
- 13) I and J are \_\_\_\_\_ if they are operations in different transactions performed on the same data item, and at least one of them is a write operation.
- a) Conflicting
  - b) Overwriting
  - c) Isolated
  - d) Durable
- 14) \_\_\_\_\_ index has an index entry for every search key value in the data file.
- a) Sparse
  - b) Dense
  - c) Both a and b
  - d) None of these

**DATABASE MANAGEMENT SYSTEM (DBMS)**

Day & Date: Saturday, 14-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

**Q.2 Attempt any three.** **12**

- a) Define the following terms with example:  
Entity, Multi-valued Attribute, Composite Attribute, Derived Attribute
- b) Define and explain second normal form.
- c) Explain different types of keys for entity set in database with example for each.
- d) Explain any four aggregate functions with example.

**Q.3 Attempt any two.** **16**

- a) Write SQL queries for following statements.  
 Student (Enrno, name, courseId, emailId, cellno)  
 Course (courseId, course\_nm, duration)
  - 1) Find out list of students who have enrolled in “computer” course.
  - 2) List name of all courses with their duration.
  - 3) List name of all students start with ‘a’.
  - 4) List email Id and cell no of all mechanical engineering students.
- b) What is DBMS? Name at least 3 DBMSs. List and explain the drawbacks of file system.
- c) Explain Fundamental and additional relational algebra operations with example.

**Section – II**

**Q.4 Attempt any three.** **12**

- a) Explain the various transaction states with a neat transaction state diagram.
- b) Explain ACID properties of transaction.
- c) Explain types of failures.
- d) Define deadlock. Explain the concept of deadlock in transactions with example.

**Q.5 Attempt any two.** **16**

- a) What is concurrency control? Explain two-phase locking protocol in detail and list its two drawbacks.
- b) What is the need for indexing? Explain primary, clustering and secondary index.
- c) Write short note on conflict and view serializability.

- 9) A command to remove a relation from an SQL database.
- a) Delete Table < table name>
  - b) Drop Table <table name>
  - c) Erase Table <table name>
  - d) Alter Table <table name>
- 10)  $\sigma_{\text{year} > 2009}(\text{book} \bowtie \text{borrow})$  will \_\_\_\_.
- a) Select all tuples from the Cartesian product of book and borrow
  - b) Select all tuples from the natural join of book and borrow where the year is greater than 2009
  - c) Select all the books which are borrowed after the year 2009
  - d) Both b) and c)
- 11) We apply the aggregate function to a group of sets of tuples using the \_\_\_\_ clause.
- a) group by
  - b) Group
  - c) group set
  - d) group attribute
- 12) The operator that performs pattern matching is \_\_\_\_.
- a) BETWEEN
  - b) EXISTS
  - c) LIKE
  - d) None of these
- 13) Which SQL command is used to sort the result set?
- a) Sort by
  - b) Sort
  - c) Order
  - d) Order by
- 14) A transaction is in \_\_\_\_ state after the final statement has been executed.
- a) Active
  - b) Committed
  - c) Partially Committed
  - d) None of these

- d) Define deadlock. Explain the concept of deadlock in transactions with example.

**Q.5 Attempt any two.** **16**

- a) What is concurrency control? Explain two-phase locking protocol in detail and list its two drawbacks.
- b) What is the need for indexing? Explain primary, clustering and secondary index.
- c) Write short note on conflict and view serializability.

- 10) \_\_\_\_\_ index has an index entry for every search key value in the data file.
- a) Sparse
  - b) Dense
  - c) Both a and b
  - d) None of these
- 11) What is an Instance of a Database?
- a) The logical design of the database system
  - b) The entire set of attributes of the Database
  - c) The state of the database system at any given point of time
  - d) The initial values inserted into the Database immediately after its creation
- 12) A command to remove a relation from an SQL database.
- a) Delete Table < table name>
  - b) Drop Table <table name>
  - c) Erase Table <table name>
  - d) Alter Table <table name>
- 13)  $\sigma_{\text{year} > 2009}(\text{book} \bowtie \text{borrow})$  will \_\_\_\_\_.
- a) Select all tuples from the Cartesian product of book and borrow
  - b) Select all tuples from the natural join of book and borrow where the year is greater than 2009
  - c) Select all the books which are borrowed after the year 2009
  - d) Both b) and c)
- 14) We apply the aggregate function to a group of sets of tuples using the \_\_\_\_\_ clause.
- a) group by
  - b) Group
  - c) group set
  - d) group attribute

**B.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**DATABASE MANAGEMENT SYSTEM (DBMS)**

Day & Date: Saturday, 14-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

**Q.2 Attempt any three.** **12**

- a) Define the following terms with example:  
Entity, Multi-valued Attribute, Composite Attribute, Derived Attribute
- b) Define and explain second normal form.
- c) Explain different types of keys for entity set in database with example for each.
- d) Explain any four aggregate functions with example.

**Q.3 Attempt any two.** **16**

- a) Write SQL queries for following statements.  
 Student (Enrno, name, courseId, emailId, cellno)  
 Course (courseId, course\_nm, duration)
  - 1) Find out list of students who have enrolled in “computer” course.
  - 2) List name of all courses with their duration.
  - 3) List name of all students start with ‘a’.
  - 4) List email Id and cell no of all mechanical engineering students.
- b) What is DBMS? Name at least 3 DBMSs. List and explain the drawbacks of file system.
- c) Explain Fundamental and additional relational algebra operations with example.

**Section – II**

**Q.4 Attempt any three.** **12**

- a) Explain the various transaction states with a neat transaction state diagram.
- b) Explain ACID properties of transaction.
- c) Explain types of failures.
- d) Define deadlock. Explain the concept of deadlock in transactions with example.

**Q.5 Attempt any two.** **16**

- a) What is concurrency control? Explain two-phase locking protocol in detail and list its two drawbacks.
- b) What is the need for indexing? Explain primary, clustering and secondary index.
- c) Write short note on conflict and view serializability.

**B.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**DATABASE MANAGEMENT SYSTEM (DBMS)**

Day & Date: Saturday, 14-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.  
 4) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) The "all-or-none" property is commonly referred to as \_\_\_\_\_.
  - a) Isolation
  - b) Atomicity
  - c) Durability
  - d) All the above
- 2) Two phase locking protocol ensures \_\_\_\_\_.
  - a) Serializability
  - b) Freedom from deadlock
  - c) Cascadeless Schedule
  - d) None of these
- 3) A deadlock exists in the system if and only if the wait for graph contains a \_\_\_\_\_.
  - a) Cycle
  - b) Direction
  - c) Rotation
  - d) Bi-direction
- 4) I and J are \_\_\_\_\_ if they are operations in different transactions performed on the same data item, and at least one of them is a write operation.
  - a) Conflicting
  - b) Overwriting
  - c) Isolated
  - d) Durable
- 5) \_\_\_\_\_ index has an index entry for every search key value in the data file.
  - a) Sparse
  - b) Dense
  - c) Both a and b
  - d) None of these
- 6) What is an Instance of a Database?
  - a) The logical design of the database system
  - b) The entire set of attributes of the Database
  - c) The state of the database system at any given point of time
  - d) The initial values inserted into the Database immediately after its creation
- 7) A command to remove a relation from an SQL database.
  - a) Delete Table <table name>
  - b) Drop Table <table name>
  - c) Erase Table <table name>
  - d) Alter Table <table name>

- 8)  $\sigma$  year > 2009 (book  $\bowtie$  borrow) will \_\_\_\_\_.
- a) Select all tuples from the Cartesian product of book and borrow
  - b) Select all tuples from the natural join of book and borrow where the year is greater than 2009
  - c) Select all the books which are borrowed after the year 2009
  - d) Both b) and c)
- 9) We apply the aggregate function to a group of sets of tuples using the \_\_\_\_\_ clause.
- a) group by
  - b) Group
  - c) group set
  - d) group attribute
- 10) The operator that performs pattern matching is \_\_\_\_\_.
- a) BETWEEN
  - b) EXISTS
  - c) LIKE
  - d) None of these
- 11) Which SQL command is used to sort the result set?
- a) Sort by
  - b) Sort
  - c) Order
  - d) Order by
- 12) A transaction is in \_\_\_\_\_ state after the final statement has been executed.
- a) Active
  - b) Committed
  - c) Partially Committed
  - d) None of these
- 13) The characteristic/s of transaction/s is/are \_\_\_\_\_.
- a) Atomicity
  - b) Durability
  - c) Isolation
  - d) All the above
- 14) Collection of operations that form a single logical unit of work are called \_\_\_\_\_.
- a) Transaction
  - b) Data Commit
  - c) Data Rollback
  - d) Data Automation

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Assume suitable data wherever.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) The symbol ★ indicates \_\_\_\_\_.
  - a) Correlation
  - b) Convolution
  - c) Multiplication
  - d) None
- 2) The equation  $H_i(U, V) = \frac{1}{H(U, V)}$  for \_\_\_\_\_ filter.
  - a) Inverse filter
  - b) Pseudo-Inverse
  - c) Weiner
  - d) None
- 3) Digital video can be obtained by sampling analog video in the \_\_\_\_\_ direction along the scan lines.
  - a) Horizontal
  - b) Vertical
  - c) Ratsra
  - d) None
- 4) 2-D motion, also called \_\_\_\_\_.
  - a) Rejected motion
  - b) Projected motion
  - c) Optical flow motion
  - d) None
- 5)  $\frac{\partial s_c(x; t)}{\partial x_1} v_1(x, t) + \frac{\partial s_c(x; t)}{\partial x_2} v_2(x, t) + \frac{\partial s_c(x; t)}{\partial t} = 0$  is called as \_\_\_\_\_.
  - a) Optical flow equation
  - b) Motion estimation
  - c) optimization method
  - d) None
- 6) The symbol  $\ominus$  represents \_\_\_\_\_ operation.
  - a) Erosion
  - b) Dilation
  - c) Thinning
  - d) Thickening
- 7) The PDF of pepper and salt noise is represented by \_\_\_\_\_.
  - a)  $P(z) = Pa$  for  $Z = a$   
 $= Pb$  for  $Z = b$   
 $= 0$  otherwise
  - b)  $P(z) = \frac{1}{b-a}$  for  $a < z < b$
  - c)  $P(z) = ae^{-az}$  for  $Z > 0$
  - d) none
- 8) Smallest part of an neighbour pixels is called as \_\_\_\_\_.
  - a) Pixel
  - b) Pel
  - c) Kernel
  - d) Coefficient

- 9) Pixel having Euclidean distance from  $f(x,y)$  from a shape \_\_\_\_\_ with radius centred at  $(x, y)$ .
- |           |            |
|-----------|------------|
| a) Disk   | b) Diamond |
| c) Square | d) Pyramid |
- 10) YUV color models family are useful in \_\_\_\_\_ applications.
- |                          |                          |
|--------------------------|--------------------------|
| a) Display devices       | b) Printing applications |
| c) Color TV broadcasting | d) None                  |
- 11)  $s = c r^v$ , where S-output grey level, r-input grey level, c-positive constant, v-positive constant; means \_\_\_\_\_.
- |                      |                  |
|----------------------|------------------|
| a) Negative          | b) Log transform |
| c) Bit plane slicing | d) Power law     |
- 12) If number of storage bits are 524288 for 8-bit image, then size of image is \_\_\_\_\_.
- |              |                |
|--------------|----------------|
| a) 256 x 256 | b) 128 x 128   |
| c) 512 x 512 | d) 1024 x 1024 |
- 13)  $H(U, V) = 1 - e^{-\frac{D^2(U,V)}{2\sigma^2}}$  is equation for \_\_\_\_\_ in frequency domain.
- |                    |                  |
|--------------------|------------------|
| a) Butterworth HPF | b) Gaussian HPF  |
| c) Ideal HPF       | d) None of these |
- 14) Full color image means \_\_\_\_\_.
- |           |           |
|-----------|-----------|
| a) 8-bit  | b) 24-bit |
| c) 16-bit | d) 4-bit  |

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.****14**

- 1) To what value should the bandwidth of  $x(n)$  has to be reduced in order to avoid aliasing?
  - a)  $F/D$
  - b)  $F/2D$
  - c)  $F/4D$
  - d) None of the mentioned
- 2) The linear filtering operation followed by down sampling on  $x(n)$  is not time invariant.
  - a) True
  - b) False
- 3) Sampling rate conversion by the rational factor  $I/D$  is accomplished by what connection of interpolator and decimator?
  - a) Parallel
  - b) Cascade
  - c) Convolution
  - d) None of the mentioned
- 4) Which of the following methods are used in sampling rate conversion of a digital signal?
  - a) D/A convertor and A/D convertor
  - b) Performing entirely in digital domain
  - c) None of the mentioned
  - d) Both of the mentioned
- 5) Which of the following is the disadvantage of sampling rate conversion by converting the signal into analog signal?
  - a) Signal distortion
  - b) Quantization effects
  - c) New sampling rate can be arbitrarily selected
  - d) Signal distortion & Quantization effects
- 6) Power spectral density function is a \_\_\_\_\_.
  - a) Real and even function
  - b) Non negative function
  - c) Periodic
  - d) All of the mentioned
- 7) Power spectrum describes distribution of \_\_\_\_\_ under frequency domain.
  - a) Mean
  - b) Variance
  - c) Gaussian
  - d) None of the mentioned

- 8) According to Parseval's theorem the energy spectral density curve is equal to \_\_\_\_\_.  
a) Area under magnitude of the signal  
b) Area under square of the magnitude of the signal  
c) Area under square root of magnitude of the signal  
d) None of the mentioned
- 9) Autocorrelation function of periodic signal is equal to \_\_\_\_\_.  
a) Energy of the signal                      b) Power of the signal  
c) Its area in frequency domain      d) None of the mentioned
- 10) Autocorrelation function of white noise will have?  
a) Strong peak                                  b) Infinite peak  
c) Weak peak                                    d) None of the mentioned
- 11) Rate of convergence is defined by \_\_\_\_\_ of algorithm.  
a) Time span                                    b) Number of iterations  
c) Accuracy                                      d) Complexity
- 12) Computational complexity is a measure of \_\_\_\_\_.  
a) Time                                            b) Number of iterations  
c) Number of operations                  d) Accuracy
- 13) Which of the following is a method for implementing a FIR system?  
a) Direct form                                  b) Cascade form  
c) Lattice structure                          d) All of the mentioned
- 14) In IIR Filter design by the Bilinear Transformation, the Bilinear Transformation is a mapping from \_\_\_\_\_.  
a) Z-plane to S-plane                      b) S-plane to Z-plane  
c) S-plane to J-plane                        d) J-plane to Z-plane

**B.E. (Part – I) (New) (CBCS) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ADVANCED DSP**

Day & Date: Tuesday, 17-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**Section – I**

- Q.2 Attempt any two. 14**
- a) Design an ideal low pass filter with a frequency response.  

$$H_d(e^{j\omega}) = 1 \text{ for } 0 \leq |\omega| \leq \pi/4$$

$$= 0 \text{ otherwise}$$
 Find the values for  $h(n)$  for  $N=7$ .
- b) Explain digital filter banks with polyphase structures.  
 c) Explain FIR Wiener filter for filtering and prediction.
- Q.3 Attempt any two. 14**
- a) Draw the direct form II structure for the system.  

$$y(n) = -0.1 y(n-1) + 0.72 y(n-2) + 0.7 x(n) - 0.252 x(n-2).$$
- b) Explain Sampling rate conversion using interpolation and decimation.  
 c) Explain AR and ARMA model.

**Section – II**

- Q.4 Attempt any two. 14**
- a) Explain LMS algorithm used in adaptive filters.  
 b) Explain power spectrum estimation using parametric method.  
 c) Write a note on wavelet transform.
- Q.5 Attempt any two. 14**
- a) Explain MUSIC algorithm used for spectrum estimation.  
 b) Explain application of adaptive filter for noise cancellation.  
 c) Explain Minimum Mean Square (MMS) criterion in adaptive filters.

**Electronics & Telecommunication Engineering**  
**ADVANCED DSP**

Day & Date: Tuesday, 17-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in first 30 minutes in answer Book.  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) According to Parseval's theorem the energy spectral density curve is equal to \_\_\_\_\_.
  - a) Area under magnitude of the signal
  - b) Area under square of the magnitude of the signal
  - c) Area under square root of magnitude of the signal
  - d) None of the mentioned
- 2) Autocorrelation function of periodic signal is equal to \_\_\_\_\_.
  - a) Energy of the signal
  - b) Power of the signal
  - c) Its area in frequency domain
  - d) None of the mentioned
- 3) Autocorrelation function of white noise will have?
  - a) Strong peak
  - b) Infinite peak
  - c) Weak peak
  - d) None of the mentioned
- 4) Rate of convergence is defined by \_\_\_\_\_ of algorithm.
  - a) Time span
  - b) Number of iterations
  - c) Accuracy
  - d) Complexity
- 5) Computational complexity is a measure of \_\_\_\_\_.
  - a) Time
  - b) Number of iterations
  - c) Number of operations
  - d) Accuracy
- 6) Which of the following is a method for implementing a FIR system?
  - a) Direct form
  - b) Cascade form
  - c) Lattice structure
  - d) All of the mentioned
- 7) In IIR Filter design by the Bilinear Transformation, the Bilinear Transformation is a mapping from \_\_\_\_\_.
  - a) Z-plane to S-plane
  - b) S-plane to Z-plane
  - c) S-plane to J-plane
  - d) J-plane to Z-plane
- 8) To what value should the bandwidth of  $x(n)$  has to be reduced in order to avoid aliasing?
  - a)  $F/D$
  - b)  $F/2D$
  - c)  $F/4D$
  - d) None of the mentioned
- 9) The linear filtering operation followed by down sampling on  $x(n)$  is not time invariant.
  - a) True
  - b) False

- 10) Sampling rate conversion by the rational factor  $I/D$  is accomplished by what connection of interpolator and decimator?
- a) Parallel
  - b) Cascade
  - c) Convolution
  - d) None of the mentioned
- 11) Which of the following methods are used in sampling rate conversion of a digital signal?
- a) D/A convertor and A/D convertor
  - b) Performing entirely in digital domain
  - c) None of the mentioned
  - d) Both of the mentioned
- 12) Which of the following is the disadvantage of sampling rate conversion by converting the signal into analog signal?
- a) Signal distortion
  - b) Quantization effects
  - c) New sampling rate can be arbitrarily selected
  - d) Signal distortion & Quantization effects
- 13) Power spectral density function is a \_\_\_\_\_.
- a) Real and even function
  - b) Non negative function
  - c) Periodic
  - d) All of the mentioned
- 14) Power spectrum describes distribution of \_\_\_\_\_ under frequency domain.
- a) Mean
  - b) Variance
  - c) Gaussian
  - d) None of the mentioned

Day & Date: Saturday, 07-12-2019  
Time: 02.30 PM To 05.30 PM

Max. Marks: 70

- Instructions:**
- 1) Q. No. 1 is compulsory. It should be solved in first 30 minutes in answer book.
  - 2) Figures to the right indicate full marks.
  - 3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The topology requires multipoint connection \_\_\_\_\_.  
a) Star  
b) Mesh  
c) Ring  
d) Bus
- 2) In this topology there is a central controller or hub \_\_\_\_\_.  
a) Star  
b) Mesh  
c) Ring  
d) Bus
- 3) The physical layer is responsible for moving \_\_\_\_\_ from one (node) to the next.  
a) segments  
b) Frames  
c) bits  
d) Datagram
- 4) Which one of the following task is not done by data link layer?  
a) framing  
b) error control  
c) flow control  
d) channel coding
- 5) The address space of IPV4 is \_\_\_\_\_.  
a)  $2^{32}$   
b)  $2^{16}$   
c)  $2^8$   
d) None of these
- 6) The port number 1011 is \_\_\_\_\_ port number.  
a) registered  
b) well-known  
c) dynamic  
d) none of these
- 7) \_\_\_\_\_ is an example of connectionless simple protocol.  
a) IP  
b) TCP  
c) UDP  
d) None of these
- 8) Which protocol does Ping use?  
a) TCP  
b) ARP  
c) ICMP  
d) BootP
- 9) Which of the following devices is a PC component that connects the computer to the network?  
a) Bridge  
b) NIC  
c) DNS Server  
d) Gateway

- 10) To deliver a message to the correct application program running on a host, the \_\_\_\_\_ address must be consulted.
- |         |                      |
|---------|----------------------|
| a) IP   | b) MAC               |
| c) Port | d) None of the above |
- 11) The time taken by a packet to travel from client to server and then back to the client is called \_\_\_\_\_
- |        |                      |
|--------|----------------------|
| a) STT | b) RTT               |
| c) PTT | d) None of the these |
- 12) Mode of data transfer in FTP, using protocol is \_\_\_\_\_.
- |                    |                  |
|--------------------|------------------|
| a) Stream mode     | b) Block mode    |
| c) Compressed mode | d) None of these |
- 13) The DHCP server can provide the \_\_\_\_\_ of the IP addresses.
- |                       |                         |
|-----------------------|-------------------------|
| a) dynamic allocation | b) automatic allocation |
| c) static allocation  | d) all of these         |
- 14) Header size of the ICMP message is \_\_\_\_\_.
- |             |            |
|-------------|------------|
| a) 8-bytes  | b) 8-bits  |
| c) 16-bytes | d) 16-bits |

**B.E. (Part - I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**COMPUTER COMMUNICATION NETWORK**

Day & Date: Saturday,07-12-2019  
 Time: 02.30 PM To 05.30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

- Q.2 Attempt any three:** **12**
- a) Write difference between TCP and UDP.
  - b) Explain in short Media Access Control.
  - c) Draw and explain 3 topologies along with it's advantages and disadvantages.
  - d) Draw and explain hamming code error detection technique.
  - e) With a neat sketch explain mode transition in HDLC.
- Q.3 Attempt any two:** **16**
- a) Explain the working of stop and wait flow control and Sliding window flow control. Comment on the channel utilization in both the cases.
  - b) Explain concept of subnetting with one example. Also write about special IP addresses.
  - c) With the help of neat sketch explain connection establishment, data transfer and connection termination phases of TCP.

**Section – II**

- Q.4 Attempt any three:** **12**
- a) Explain in short RARP and BOOTP protocols.
  - b) Explain in short ICMP query messages.
  - c) Explain various name spaces used in DNS.
  - d) Explain how connection is established in FTP for file transfer.
  - e) Explain in short shortest path routing.
- Q.5 Attempt any two.** **16**
- a) Draw and explain DHCP packet format.
  - b) Explain architecture of Email using four scenarios which includes user agents (UA), Message Transfer agents (MTA) and Message Access Agents (MAA).
  - c) What is count to infinity problem in distance vector routing? Give it's solution.

|---------------|------------|
| a) Bridge     | b) NIC     |
| c) DNS Server | d) Gateway |
- 3) To deliver a message to the correct application program running on a host, the \_\_\_\_\_ address must be consulted.
 

|         |                      |
|---------|----------------------|
| a) IP   | b) MAC               |
| c) Port | d) None of the above |
- 4) The time taken by a packet to travel from client to server and then back to the client is called \_\_\_\_\_.
 

|        |                      |
|--------|----------------------|
| a) STT | b) RTT               |
| c) PTT | d) None of the these |
- 5) Mode of data transfer in FTP, using protocol is \_\_\_\_\_.
 

|                    |                  |
|--------------------|------------------|
| a) Stream mode     | b) Block mode    |
| c) Compressed mode | d) None of these |
- 6) The DHCP server can provide the \_\_\_\_\_ of the IP addresses.
 

|                       |                         |
|-----------------------|-------------------------|
| a) dynamic allocation | b) automatic allocation |
| c) static allocation  | d) all of these         |
- 7) Header size of the ICMP message is \_\_\_\_\_.
 

|             |            |
|-------------|------------|
| a) 8-bytes  | b) 8-bits  |
| c) 16-bytes | d) 16-bits |
- 8) The topology requires multipoint connection \_\_\_\_\_.
 

|         |         |
|---------|---------|
| a) Star | b) Mesh |
| c) Ring | d) Bus  |
- 9) In this topology there is a central controller or hub \_\_\_\_\_.
 

|         |         |
|---------|---------|
| a) Star | b) Mesh |
| c) Ring | d) Bus  |

- 10) The physical layer is responsible for moving \_\_\_\_\_ from one (node) to the next.
- a) segments
  - b) Frames
  - c) bits
  - d) Datagram
- 11) Which one of the following task is not done by data link layer?
- a) framing
  - b) error control
  - c) flow control
  - d) channel coding
- 12) The address space of IPV4 is \_\_\_\_\_.
- a)  $2^{32}$
  - b)  $2^{16}$
  - c)  $2^8$
  - d) None of these
- 13) The port number 1011 is \_\_\_\_\_ port number.
- a) registered
  - b) well-known
  - c) dynamic
  - d) none of these
- 14) \_\_\_\_\_ is an example of connectionless simple protocol.
- a) IP
  - b) TCP
  - c) UDP
  - d) None of these

|---|
| Q |
|---|

**B.E. (Part - I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**COMPUTER COMMUNICATION NETWORK**

Day & Date: Saturday,07-12-2019  
 Time: 02.30 PM To 05.30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

- Q.2 Attempt any three:** **12**
- a) Write difference between TCP and UDP.
  - b) Explain in short Media Access Control.
  - c) Draw and explain 3 topologies along with it's advantages and disadvantages.
  - d) Draw and explain hamming code error detection technique.
  - e) With a neat sketch explain mode transition in HDLC.
- Q.3 Attempt any two:** **16**
- a) Explain the working of stop and wait flow control and Sliding window flow control. Comment on the channel utilization in both the cases.
  - b) Explain concept of subnetting with one example. Also write about special IP addresses.
  - c) With the help of neat sketch explain connection establishment, data transfer and connection termination phases of TCP.

**Section – II**

- Q.4 Attempt any three:** **12**
- a) Explain in short RARP and BOOTP protocols.
  - b) Explain in short ICMP query messages.
  - c) Explain various name spaces used in DNS.
  - d) Explain how connection is established in FTP for file transfer.
  - e) Explain in short shortest path routing.
- Q.5 Attempt any two.** **16**
- a) Draw and explain DHCP packet format.
  - b) Explain architecture of Email using four scenarios which includes user agents (UA), Message Transfer agents (MTA) and Message Access Agents (MAA).
  - c) What is count to infinity problem in distance vector routing? Give it's solution.

**B.E. (Part - I) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
COMPUTER COMMUNICATION NETWORK**

Day & Date: Saturday,07-12-2019  
Time: 02.30 PM To 05.30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in first 30 minutes in answer book.  
2) Figures to the right indicate full marks.  
3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The address space of IPV4 is \_\_\_\_\_.
  - a)  $2^{32}$
  - b)  $2^{16}$
  - c)  $2^8$
  - d) None of these
- 2) The port number 1011 is \_\_\_\_\_ port number.
  - a) registered
  - b) well-known
  - c) dynamic
  - d) none of these
- 3) \_\_\_\_\_ is an example of connectionless simple protocol.
  - a) IP
  - b) TCP
  - c) UDP
  - d) None of these
- 4) Which protocol does Ping use?
  - a) TCP
  - b) ARP
  - c) ICMP
  - d) BootP
- 5) Which of the following devices is a PC component that connects the computer to the network?
  - a) Bridge
  - b) NIC
  - c) DNS Server
  - d) Gateway
- 6) To deliver a message to the correct application program running on a host, the \_\_\_\_\_ address must be consulted.
  - a) IP
  - b) MAC
  - c) Port
  - d) None of the above
- 7) The time taken by a packet to travel from client to server and then back to the client is called \_\_\_\_\_.
  - a) STT
  - b) RTT
  - c) PTT
  - d) None of the these
- 8) Mode of data transfer in FTP, using protocol is \_\_\_\_\_.
  - a) Stream mode
  - b) Block mode
  - c) Compressed mode
  - d) None of these
- 9) The DHCP server can provide the \_\_\_\_\_ of the IP addresses.
  - a) dynamic allocation
  - b) automatic allocation
  - c) static allocation
  - d) all of these

- 10) Header size of the ICMP message is \_\_\_\_\_.
  - a) 8-bytes
  - b) 8-bits
  - c) 16-bytes
  - d) 16-bits
- 11) The topology requires multipoint connection \_\_\_\_\_.
  - a) Star
  - b) Mesh
  - c) Ring

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Variables in VHDL can be used in \_\_\_\_\_.  
a) Process  
b) Procedure  
c) Function  
d) All of the above
- 2) The power dissipation of CMOS IC will \_\_\_\_\_.  
a) increase with frequency  
b) decrease with frequency  
c) both a and b  
d) none of these
- 3) Which among the following is a process of transforming design entry information of the circuit into a set of logic equations?  
a) Simulation  
b) Optimization  
c) Synthesis  
d) Verification
- 4) In VHDL which object is used to connect entities together for the model formation?  
a) Constant  
b) Variable  
c) Signal  
d) All of the above
- 5) For Complex gate design in CMOS, OR function needs to be implemented by \_\_\_\_\_.  
a) Series  
b) Parallel  
c) Both series and parallel  
d) None of the above
- 6) In enhancement MOSFET, the magnitude of output current \_\_\_\_\_ due to an increase in the magnitude of the gate potential.  
a) increases  
b) remains constant  
c) decreases  
d) none of the above
- 7) In concurrent code which of the statements can be used?  
a) When else statement  
b) Generate Statement  
c) Block statement  
d) All of the above
- 8) To test AND gate for stuck-at-1 we apply \_\_\_\_\_ to the input being tested and \_\_\_\_\_ to other input.  
a) 0 and 1  
b) 1 and 0  
c) 1 and 1  
d) 0 and 0
- 9) The CPLD contains several PAL-type simple programmable logic devices (SPLDs) called \_\_\_\_\_.  
a) Macrocell  
b) Microcell  
c) AND/OR arrays  
d) Fuse-link arrays

- 10) Propagation delay is more in \_\_\_\_\_ than \_\_\_\_\_.
- a) FPGA, CPLD
  - b) CPLD, FPGA
  - c) Can't say
  - d) None of these
- 11) In XC 9500 one macrocell can have maximum \_\_\_\_\_ product terms.
- a) 72
  - b) 36
  - c) 90
  - d) 18
- 12) To detect N bit sequence using Moore machine, the number of states required is \_\_\_\_\_.
- a)  $2N$
  - b)  $N+1$
  - c)  $N-1$
  - d)  $2N-1$
- 13) In which of the following programming method is used for FPGA?
- a) SRAM
  - b) Fuse
  - c) both a and b
  - d) none of these
- 14) In Moore circuits, the output depends on \_\_\_\_\_.
- a) Present state
  - b) Present state and input
  - c) Inputs
  - d) None of these

**B.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
VLSI DESIGN**

Day & Date: Tuesday, 10-12-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

**Instructions:** 1) All questions are compulsory.  
2) Figure to the right indicates full marks.

**Section – I**

- Q.2 Answer any Four.** **16**
- a) Design a VHDL module for BCD to 7 segment decoder.
  - b) With the help of DC characteristics explain operation of CMOS inverter.
  - c) Realize the Boolean expression  $Y = [A(B+C)]'$  using CMOS logic.
  - d) Compare signal, variable and constant in VHDL.
  - e) Explain WAIT statements in VHDL.
- Q.3 Answer any Two.** **12**
- a) 1) Derive the expression for dynamic power dissipation in CMOS inverter.  
2) Calculate dynamic power dissipation in CMOS inverter when  $V_{DD} = 3.3\text{ V}$ ,  $C = 10\text{ pF}$ ,  $F = 100\text{ MHz}$ .
  - b) Write a VHDL code to realize 4 X 4 Array multiplier.
  - c) With example explain generic and generate statement in VHDL.

**Section – II**

- Q.4 Answer any Four.** **16**
- a) Draw Macrocell and explain its working.
  - b) With example explain testing of Combinational logic.
  - c) Write a test bench for 4: 2 encoder.
  - d) How Built-In Self-Test is used to check ICs?
  - e) Draw state diagram and write VHDL code for T flip flop.
- Q.5 Answer any Two.** **12**
- a) Explain in detail different architectures of FPGA.
  - b) Draw state diagram and write VHDL code to realize Coffee vending machine.
  - c) Draw state diagram and write VHDL code for ADD and SHIFT multiplier.

 2) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) To test AND gate for stuck-at-1 we apply \_\_\_\_\_ to the input being tested and \_\_\_\_\_ to other input.
 

|            |            |
|------------|------------|
| a) 0 and 1 | b) 1 and 0 |
| c) 1 and 1 | d) 0 and 0 |
- 2) The CPLD contains several PAL-type simple programmable logic devices (SPLDs) called \_\_\_\_\_.
 

|                  |                     |
|------------------|---------------------|
| a) Macrocell     | b) Microcell        |
| c) AND/OR arrays | d) Fuse-link arrays |
- 3) Propagation delay is more in \_\_\_\_\_ than \_\_\_\_\_.
 

|               |                  |
|---------------|------------------|
| a) FPGA, CPLD | b) CPLD, FPGA    |
| c) Can't say  | d) None of these |
- 4) In XC 9500 one macrocell can have maximum \_\_\_\_\_ product terms.
 

|       |       |
|-------|-------|
| a) 72 | b) 36 |
| c) 90 | d) 18 |
- 5) To detect N bit sequence using Moore machine, the number of states required is \_\_\_\_\_.
 

|        |         |
|--------|---------|
| a) 2N  | b) N+1  |
| c) N-1 | d) 2N-1 |
- 6) In which of the following programming method is used for FPGA?
 

|                 |                  |
|-----------------|------------------|
| a) SRAM         | b) Fuse          |
| c) both a and b | d) none of these |
- 7) In Moore circuits, the output depends on \_\_\_\_\_.
 

|                  |                            |
|------------------|----------------------------|
| a) Present state | b) Present state and input |
| c) Inputs        | d) None of these           |
- 8) Variables in VHDL can be used in \_\_\_\_\_.
 

|             |                     |
|-------------|---------------------|
| a) Process  | b) Procedure        |
| c) Function | d) All of the above |
- 9) The power dissipation of CMOS IC will \_\_\_\_\_.
 

|                            |                            |
|----------------------------|----------------------------|
| a) increase with frequency | b) decrease with frequency |
| c) both a and b            | d) none of these           |

- 10) Which among the following is a process of transforming design entry information of the circuit into a set of logic equations?
- a) Simulation
  - b) Optimization
  - c) Synthesis
  - d) Verification
- 11) In VHDL which object is used to connect entities together for the model formation?

- Instructions:** 1) All questions are compulsory.  
2) Figure to the right indicates full marks.

**Section – I**

- Q.2 Answer any Four.** **16**
- Design a VHDL module for BCD to 7 segment decoder.
  - With the help of DC characteristics explain operation of CMOS inverter.
  - Realize the Boolean expression  $Y = [A(B+C)]'$  using CMOS logic.
  - Compare signal, variable and constant in VHDL.
  - Explain WAIT statements in VHDL.
- Q.3 Answer any Two.** **12**
- Derive the expression for dynamic power dissipation in CMOS inverter.
    - Calculate dynamic power dissipation in CMOS inverter when  $V_{DD} = 3.3\text{ V}$ ,  $C = 10\text{ pF}$ ,  $F = 100\text{ MHz}$ .
  - Write a VHDL code to realize 4 X 4 Array multiplier.
  - With example explain generic and generate statement in VHDL.

**Section – II**

- Q.4 Answer any Four.** **16**
- Draw Macrocell and explain its working.
  - With example explain testing of Combinational logic.
  - Write a test bench for 4: 2 encoder.
  - How Built-In Self-Test is used to check ICs?
  - Draw state diagram and write VHDL code for T flip flop.
- Q.5 Answer any Two.** **12**
- Explain in detail different architectures of FPGA.
  - Draw state diagram and write VHDL code to realize Coffee vending machine.
  - Draw state diagram and write VHDL code for ADD and SHIFT multiplier.

**B.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
VLSI DESIGN**

Day & Date: Tuesday, 10-12-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
2) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) For Complex gate design in CMOS, OR function needs to be implemented by \_\_\_\_\_.
  - a) Series
  - b) Parallel
  - c) Both series and parallel
  - d) None of the above
- 2) In enhancement MOSFET, the magnitude of output current \_\_\_\_\_ due to an increase in the magnitude of the gate potential.
  - a) increases
  - b) remains constant
  - c) decreases
  - d) none of the above
- 3) In concurrent code which of the statements can be used?
  - a) When else statement
  - b) Generate Statement
  - c) Block statement
  - d) All of the above
- 4) To test AND gate for stuck- at-1 we apply \_\_\_\_\_ to the input being tested and \_\_\_\_\_ to other input.
  - a) 0 and 1
  - b) 1 and 0
  - c) 1 and 1
  - d) 0 and 0
- 5) The CPLD contains several PAL-type simple programmable logic devices (SPLDs) called \_\_\_\_\_.
  - a) Macrocell
  - b) Microcell
  - c) AND/OR arrays
  - d) Fuse-link arrays
- 6) Propagation delay is more in \_\_\_\_\_ than \_\_\_\_\_.
  - a) FPGA, CPLD
  - b) CPLD, FPGA
  - c) Can't say
  - d) None of these
- 7) In XC 9500 one macrocell can have maximum \_\_\_\_\_ product terms.
  - a) 72
  - b) 36
  - c) 90
  - d) 18
- 8) To detect N bit sequence using Moore machine, the number of states required is \_\_\_\_\_.
  - a) 2N
  - b) N+1
  - c) N-1
  - d) 2N-1
- 9) In which of the following programming method is used for FPGA?
  - a) SRAM
  - b) Fuse
  - c) both a and b
  - d) none of these

- 10) In Moore circuits, the output depends on \_\_\_\_\_.
- a) Present state
  - b) Present state and input
  - c) Inputs
  - d) None of these
- 11) Variables in VHDL can be used in \_\_\_\_\_.
- a) Process
  - b) Procedure
  - c) Function
  - d) All of the above
- 12) The power dissipation of CMOS IC will \_\_\_\_\_.
- a) increase with frequency
  - b) decrease with frequency
  - c) both a and b
  - d) none of these
- 13) Which among the following is a process of transforming design entry information of the circuit into a set of logic equations?
- a) Simulation
  - b) Optimization
  - c) Synthesis
  - d) Verification
- 14) In VHDL which object is used to connect entities together for the model formation?
- a) Constant
  - b) Variable
  - c) Signal
  - d) All of the above

**B.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
VLSI DESIGN**

Day & Date: Tuesday, 10-12-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

**Instructions:** 1) All questions are compulsory.  
2) Figure to the right indicates full marks.

**Section – I**

- Q.2 Answer any Four.** **16**
- Design a VHDL module for BCD to 7 segment decoder.
  - With the help of DC characteristics explain operation of CMOS inverter.
  - Realize the Boolean expression  $Y = [A(B+C)]'$  using CMOS logic.
  - Compare signal, variable and constant in VHDL.
  - Explain WAIT statements in VHDL.
- Q.3 Answer any Two.** **12**
- Derive the expression for dynamic power dissipation in CMOS inverter.
    - Calculate dynamic power dissipation in CMOS inverter when  $V_{DD} = 3.3\text{ V}$ ,  $C = 10\text{ pF}$ ,  $F = 100\text{ MHz}$ .
  - Write a VHDL code to realize 4 X 4 Array multiplier.
  - With example explain generic and generate statement in VHDL.

**Section – II**

- Q.4 Answer any Four.** **16**
- Draw Macrocell and explain its working.
  - With example explain testing of Combinational logic.
  - Write a test bench for 4: 2 encoder.
  - How Built-In Self-Test is used to check ICs?
  - Draw state diagram and write VHDL code for T flip flop.
- Q.5 Answer any Two.** **12**
- Explain in detail different architectures of FPGA.
  - Draw state diagram and write VHDL code to realize Coffee vending machine.
  - Draw state diagram and write VHDL code for ADD and SHIFT multiplier.

- 10) For Complex gate design in CMOS, OR function needs to be implemented by \_\_\_\_\_.
- a) Series
  - b) Parallel
  - c) Both series and parallel
  - d) None of the above
- 11) In enhancement MOSFET, the magnitude of output current \_\_\_\_\_ due to an increase in the magnitude of the gate potential.
- a) increases
  - b) remains constant
  - c) decreases
  - d) none of the above

 2) Each question carries one mark.  
 3) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Calculate the radius of a circular orbit for which the period is 1 day?
 

|             |            |
|-------------|------------|
| a) 42.241Km | b) 42.241m |
| c) 4.241Km  | d) 2.241Km |
- 2) What is application of satellite systems?
 

|                                 |                              |
|---------------------------------|------------------------------|
| a) Whether forecasting          | b) Terrestrial communication |
| c) Point to point communication | d) None of the above         |
- 3) Atmospheric drag has negligible effect on \_\_\_\_\_.
 

|                             |                  |
|-----------------------------|------------------|
| a) Geostationary satellites | b) MEO           |
| c) LEO                      | d) None of these |
- 4) The down link frequency in the C band transponder is \_\_\_\_\_.
 

|           |           |
|-----------|-----------|
| a) 6 GHz  | b) 4 GHz  |
| c) 14 GHz | d) 11 GHz |
- 5) A satellite downlink at 12GHz operates with a transmit power of 6w & an antenna gain of 48.2db. Calculate the EIRP in dBw.
 

|          |                  |
|----------|------------------|
| a) 56dBw | b) 16dBw         |
| c) 48dBw | d) None of above |
- 6) A 20 meter antenna gives a certain up-link gain at 5 GHz. For getting the same gain at 25 GHz ate antenna size required will be \_\_\_\_\_.
 

|          |         |
|----------|---------|
| a) 100 m | b) 80 m |
| c) 20 m  | d) 4 m  |
- 7) Satellite receives signal from \_\_\_\_\_.
 

|                                |                     |
|--------------------------------|---------------------|
| a) Microwave repeater stations | b) TV relay station |
| c) Appropriate earth station   | d) All of the above |
- 8) The Broadcast Satellite services (BSS) uses \_\_\_\_\_.
 

|                           |                                  |
|---------------------------|----------------------------------|
| a) One way Implementation | b) Split Two- way Implementation |
| c) Two-Way Implementation | d) None of these                 |
- 9) A satellite may carry \_\_\_\_\_ transponders.
 

|       |                  |
|-------|------------------|
| a) 32 | b) 41            |
| c) 24 | d) None of these |

- 10) Which area is least effectively covered by geostationary satellites?  
a) Equatorial region                      b) Polar region  
c) a and b                                      d) None of the above
- 11) \_\_\_\_\_ satellites will provide universal broadband Internet access.  
a) GPS                                              b) Iridium  
c) Teledesic                                      d) none of the above
- 12) A satellite earth station has \_\_\_\_\_.  
a) Receiving facilities only              b) Transmitting only  
c) a and b                                      d) a, c and attenuating
- 13) MATV stands for \_\_\_\_\_.  
a) Master antenna TV (MATV)              b) Maximum Angular TV  
c) Multi amplitude TV                      d) None of these
- 14) The 24-MHz bandwidth of a transponder is capable of carrying \_\_\_\_\_.  
a) One analog television channel              b) Two analog television channel  
c) Four analog television channel              d) None of these

  - b) Polar region
  - c) a and b
  - d) None of the above
- 2) \_\_\_\_\_ satellites will provide universal broadband Internet access.
  - a) GPS
  - b) Iridium
  - c) Teledesic
  - d) none of the above
- 3) A satellite earth station has \_\_\_\_\_.
  - a) Receiving facilities only
  - b) Transmitting only
  - c) a and b
  - d) a, c and attenuating
- 4) MATV stands for \_\_\_\_\_.
  - a) Master antenna TV (MATV)
  - b) Maximum Angular TV
  - c) Multi amplitude TV
  - d) None of these
- 5) The 24-MHz bandwidth of a transponder is capable of carrying \_\_\_\_\_.
  - a) One analog television channel
  - b) Two analog television channel
  - c) Four analog television channel
  - d) None of these
- 6) Calculate the radius of a circular orbit for which the period is 1 day?
  - a) 42.241Km
  - b) 42.241m
  - c) 4.241Km
  - d) 2.241Km
- 7) What is application of satellite systems?
  - a) Whether forecasting
  - b) Terrestrial communication
  - c) Point to point communication
  - d) None of the above
- 8) Atmospheric drag has negligible effect on \_\_\_\_\_.
  - a) Geostationary satellites
  - b) MEO
  - c) LEO
  - d) None of these
- 9) The down link frequency in the C band transponder is \_\_\_\_\_.
  - a) 6 GHz
  - b) 4 GHz
  - c) 14 GHz
  - d) 11 GHz
- 10) A satellite downlink at 12GHz operates with a transmit power of 6w & an antenna gain of 48.2db. Calculate the EIRP in dBw.
  - a) 56dBw
  - b) 16dBw
  - c) 48dBw
  - d) None of above

Set **S**

**B.E. (Part -I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**SATELLITE COMMUNICATION**

Day & Date: Thursday, 12-12-2019  
 Time: 02.30 PM To 05.30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**Section - I**

- Q.2 Solve any Two:** **14**
- a) Explain in detail Launch and Launch Vehicles.
  - b) Describe different subsystems used in satellite.
  - c) Derive the expression for system noise temperature & G/T ratio.
- Q.3 Solve any Two:** **14**
- a) What do you mean by look angle determination and orbital perturbation? Explain.
  - b) With the help of block diagram, comment on Telemetry, Tracking & Command (TT & C) subsystem of satellite.
  - c) Explain the process of Ku band uplink design.

**Section - II**

- Q.4 Solve any Two:** **14**
- a) With the help of block diagram, explain Earth Station Architecture.
  - b) Compare Elliptical orbits & Sun-synchronous orbit.
  - c) Discuss the concept of GPS time in detail.
- Q.5 Solve any Two:** **14**
- a) Comment on R.F equipment for Earth station and Earth Station Testing.
  - b) Explain Coverage & frequency consideration.
  - c) With the help of neat diagram, explain the working of DBS-TV Receiver.

**B.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**CODING THEORY**

Day & Date: Saturday, 14-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer Book.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) The weight of code 1101101 is \_\_\_\_\_.  
 a) 6                                              b) 5  
 c) 4                                              d) 3
- 2) A box contains 4 white and 3 black balls. Three balls are drawn from the box successively. What is the probability that the first two balls are white and third is black?  
 a)  $5/35$                                               b)  $3/35$   
 c)  $2/25$                                               d)  $6/35$
- 3) The starting point on the code tree is at the \_\_\_\_\_ and corresponds to the situation before the arrival of the first message bit.  
 a) extreme right                                              b) extreme left  
 c) middle                                              d) none of these
- 4) The redundancy of (n,k) code is defined as \_\_\_\_\_.  
 a)  $n/k$                                               b)  $k/n$   
 c)  $n-k/n$                                               d)  $n-k/k$
- 5) For double error correction the minimum distance required is \_\_\_\_\_.  
 a) 5                                              b) 4  
 c) 3                                              d) 2
- 6) In convolution code encoder with a six stage shift register, the number of modulo-2 adders is 4. For an input data stream of 5 bits, the code word size will be \_\_\_\_\_.  
 a) 68                                              b) 52  
 c) 48                                              d) 44
- 7) The sequential decoding method is \_\_\_\_\_ times faster than the exhaustive method for  $k = 6$ .  
 a) 128                                              b) 25  
 c) 21                                              d) 12
- 8) It is sometimes convenient to represent a universal set, sets and subsets with the help of geometric diagrams known as \_\_\_\_\_.  
 a) State diagram                                              b) Tree diagram  
 c) Venn diagram                                              d) Trellis diagram

- 9) The total area under the probability distribution curve is \_\_\_\_\_.  
a) 1  
b) Depends on the nature of distribution  
c) 0  
d) None of the above
- 10) The convolutional encoder in terms of its \_\_\_\_\_, is the response of the encoder to a single one bit that moves through it.  
a) real time response                      b) response  
c) impulse response                      d) none of these
- 11) The stationary process has \_\_\_\_\_.  
a) Ensemble average equal to time average  
b) all the statistical properties dependent on time  
c) all the statistical properties independent on time  
d) zero variance
- 12) The tree diagram adds the dimensions of \_\_\_\_\_ to the state diagram.  
a) Time                                              b) Branches  
c) Direction                                      d) Weight
- 13) For each  $(k \times n)$  generator matrix  $G$ , there exists an \_\_\_\_\_ matrix  $P$ .  
a)  $(n-k) \times k$                                       b)  $k \times n$   
c)  $k \times (n - k)$                                       d)  $(n - k) \times n$
- 14) A random variable that takes on a finite number of values is known as a \_\_\_\_\_.  
a) Continuous random variable              b) Discrete random variable  
c) both a and b                                      d) None of these

**Electronics & Telecommunication Engineering**  
**CODING THEORY**

Day & Date: Saturday, 14-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**Section – I**

**Q.2 Attempt any four** **16**

- a) In a factory 4 machine A1, A2, A3 & A4 produce 10%, 20%, 30% & 40% of the items respectively. The % of defective items produced by them is 5%, 4%, 3%, 2% respectively. An item selected at random is found to be defective, What is the probability that it was produced by machine A2.
- b) State & prove Baye's theorem.
- c) How error detection & correction is done in linear block code? Explain it with suitable example.
- d) What is standard array? How it is useful in decoding linear block code?
- e) The generator polynomial of (6, 3) cyclic code  $g(x)=1+x^2$ . Find all code words using non systematic method.

**Q.3 Attempt any two** **12**

- a) The parity check matrix for (7,4) block code is given by
 
$$H = \begin{bmatrix} 1 & 0 & 1 & 0 & 1 & 0 & 0 \\ 1 & 1 & 0 & 1 & 0 & 1 & 0 \\ 1 & 0 & 1 & 0 & 0 & 0 & 1 \end{bmatrix}$$
 Draw the decoder.
- b) The joint probability function of two random variables X and Y is given by
 
$$f(x,y) = c(x^2 + 2y) \quad x = 0,1,2, \quad y = 1,2,3,4$$

$$= 0 \quad \text{otherwise}$$
 Find:
  - 1) Value of C
  - 2)  $P(X = 2, Y = 3)$
  - 3)  $P(X \leq 1, Y > 2)$
- c) Define the following terms with respect to random processes.
  - 1) Stationarity
  - 2) Time average
  - 3) Ergodic process

**Section – II**

**Q.4 Attempt any four** **16**

- a) Explain different types of interleavers.
- b) With suitable example, explain polynomial representation of convolution coding.
- c) Define
  - 1) Coding gain
  - 2) Catastrophic error propagation, of convolution coding
- d) Explain in brief about turbo encoder.
- e) Explain add – compare – select computation used in decoder implementation of convolutional decoder.

**Q.5 Attempt any two**

- a) For given convolutional encoder (Fig 1) construct code tree and find the output sequence for message 10010.

Fig 1

- b) With example explain impulse response representation technique to convolution coding.
- c) Draw trellis diagram for convolution coder given in Fig 1 for input data 11010

**Electronics & Telecommunication Engineering**  
**IMAGE PROCESSING**

Day & Date: Tuesday, 17-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full mark.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) D4 distance is called as \_\_\_\_\_.  
 a) Euclidean distance                      b) City block distance  
 c) Chess board distance                      d) None
- 2) The neighbors of a pixel  $p(x, y)$  are given by  $(x + 1, Y+ 1)$ ,  $(x+ 1, y-1)$ ,  $(x-1, y-1)$ ,  $(x-1, y+1)$  Then these neighbors are called \_\_\_\_\_.  
 a) 4-neighbors                                      b) diagonal neighbors  
 c) 8-neighbors                                      d) None
- 3) CMYK color model is useful in \_\_\_\_\_.  
 a) Display devices                                b) Printing applications  
 c) Human color descriptor                      d) None
- 4)  $S = L-l-r$ , where  $s = o/p$  gray level and  $r = i/p$  gray level; means \_\_\_\_\_.  
 a) Image negative                                b) Image positive  
 c) Power law                                        d) Log
- 5) Impulse noise is also called as \_\_\_\_\_.  
 a) Salt and Paper noise                        b) Uniform noise  
 c) Gaussian noise                                d) None
- 6) Expanding the object size is nothing but \_\_\_\_\_.  
 a) Erosion                                            b) Dilation  
 c) Thinning                                         d) None
- 7) Statement 1: A median filter is effective in minimizing salt and paper noise in an image.  
 Statement 2: A median filter is a linear filter.  
 a) Statement 1 is true whereas Statement 2 is wrong  
 b) Statement 1 and 2 is true  
 c) Statement 1 and 2 is false  
 d) Statement 1 is false whereas Statement 2 is true
- 8) Which is the image processing technique used to improve the quality of image for human viewing?  
 a) compression                                    b) Enhancement  
 c) restoration                                      d) Analysis

- 9) Which type of enhancement operations are used to modify pixel values according to the value of the pixel 's neighbors?
- a) Point operations
  - b) local operations
  - c) global operations
  - d) Mask operations
- 10) Which device is used to capture the fingerprint pattern?
- a) Capture device
  - b) Fingerprint sensor
  - c) 2d sensor
  - d) Digital sensor
- 11) Which of the following is a lossy coding?
- a) Huffman code
  - b) Run-length code
  - c) Uniform code
  - d) Predictive coding without quantiser
- 12) The transform used in JPEG image Compression is \_\_\_\_\_.
- a) DCT
  - b) Walsh
  - c) DFT
  - d) Harr
- 13) First order derivative operator is also called as \_\_\_\_\_.
- a) Laplacian
  - b) Compass
  - c) Gradient
  - d) None
- 14) JPEG is \_\_\_\_\_ standard.
- a) Still image coding
  - b) Video coding
  - c) Run-Length coding
  - d) None

**B.E. (Part -I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**IMAGE PROCESSING**

Day & Date: Tuesday, 17-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicates full marks.

**SECTION I**

**Q.2 Attempt any Four:** **14**

- a) Explain the process of sampling and quantization in image processing.
- b) Explain basic morphological operation.
- c) What do you mean by non linear transformation?
- d) What do you mean by color model and its importance?
- e) State Laplacian mask for four neighbors and also state effect of Laplacian operator.

**Q.3 Attempt any Two:** **14**

- a) Explain relation between pixels in terms of connectivity, adjacency and neighbor hood.
- b) Define and explain spatial resolution, gray level resolution, histogram in detail.
- c) Explain dilation and erosion process with example.

**SECTION II**

**Q.4 Attempt any four:** **14**

- a) Explain image segmentation using thresholding.
- b) Why need of Image compression, Explain 2-D-DFT transform?
- c) Write short note on face recognition.
- d) Explain Line detection using gradients in image.
- e) Write short note on redundancy and its types.

**Q.5 Attempt any two.** **14**

- a) Explain the term fidelity and its types in detail.
- b) Write short note on
  - 1) Chain codes
  - 2) Boundary descriptors
- c) Explain image processing application based on remote sensing method in image.

**Electronics & Telecommunication Engineering**  
**ADVANCED DSP**

Day & Date: Tuesday, 17-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in first 30 minutes in answer Book.  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.****14**

- 1) To what value should the bandwidth of  $x(n)$  has to be reduced in order to avoid aliasing?
  - a)  $F/D$
  - b)  $F/2D$
  - c)  $F/4D$
  - d) None of the mentioned
- 2) The linear filtering operation followed by down sampling on  $x(n)$  is not time invariant.
  - a) True
  - b) False
- 3) Sampling rate conversion by the rational factor  $I/D$  is accomplished by what connection of interpolator and decimator?
  - a) Parallel
  - b) Cascade
  - c) Convolution
  - d) None of the mentioned
- 4) Which of the following methods are used in sampling rate conversion of a digital signal?
  - a) D/A convertor and A/D convertor
  - b) Performing entirely in digital domain
  - c) None of the mentioned
  - d) Both of the mentioned
- 5) Which of the following is the disadvantage of sampling rate conversion by converting the signal into analog signal?
  - a) Signal distortion
  - b) Quantization effects
  - c) New sampling rate can be arbitrarily selected
  - d) Signal distortion & Quantization effects
- 6) Power spectral density function is a \_\_\_\_\_.
  - a) Real and even function
  - b) Non negative function
  - c) Periodic
  - d) All of the mentioned
- 7) Power spectrum describes distribution of \_\_\_\_\_ under frequency domain.
  - a) Mean
  - b) Variance
  - c) Gaussian
  - d) None of the mentioned

- 8) According to Parseval's theorem the energy spectral density curve is equal to \_\_\_\_\_.  
a) Area under magnitude of the signal  
b) Area under square of the magnitude of the signal  
c) Area under square root of magnitude of the signal  
d) None of the mentioned
- 9) Autocorrelation function of periodic signal is equal to \_\_\_\_\_.  
a) Energy of the signal                      b) Power of the signal  
c) Its area in frequency domain      d) None of the mentioned
- 10) Autocorrelation function of white noise will have?  
a) Strong peak                                  b) Infinite peak  
c) Weak peak                                      d) None of the mentioned
- 11) Rate of convergence is defined by \_\_\_\_\_ of algorithm.  
a) Time span                                      b) Number of iterations  
c) Accuracy                                        d) Complexity
- 12) Computational complexity is a measure of \_\_\_\_\_.  
a) Time                                              b) Number of iterations  
c) Number of operations                      d) Accuracy
- 13) Which of the following is a method for implementing a FIR system?  
a) Direct form                                      b) Cascade form  
c) Lattice structure                              d) All of the mentioned
- 14) In IIR Filter design by the Bilinear Transformation, the Bilinear Transformation is a mapping from \_\_\_\_\_.  
a) Z-plane to S-plane                          b) S-plane to Z-plane  
c) S-plane to J-plane                              d) J-plane to Z-plane

**B.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ADVANCED DSP**

Day & Date: Tuesday, 17-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**Section – I**

- Q.2 Attempt any two.** **14**
- a) Design an ideal low pass filter with a frequency response.  

$$H_d(e^{jw}) = 1 \text{ for } 0 \leq |w| \leq \pi/4$$

$$= 0 \text{ otherwise}$$
 Find the values for h(n) for N=7.
- b) Explain digital filter banks with polyphase structures.  
 c) Explain FIR Wiener filter for filtering and prediction.
- Q.3 Attempt any two.** **14**
- a) Draw the direct form II structure for the system.  

$$y(n) = -0.1 y(n-1) + 0.72 y(n-2) + 0.7 x(n) - 0.252 x(n-2).$$
- b) Explain Sampling rate conversion using interpolation and decimation.  
 c) Explain AR and ARMA model.

**Section – II**

- Q.4 Attempt any two.** **14**
- a) Explain LMS algorithm used in adaptive filters.  
 b) Explain power spectrum estimation using parametric method.  
 c) Write a note on wavelet transform.
- Q.5 Attempt any two.** **14**
- a) Explain MUSIC algorithm used for spectrum estimation.  
 b) Explain application of adaptive filter for noise cancellation.  
 c) Explain Minimum Mean Square (MMS) criterion in adaptive filters.

**B.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ADVANCED DSP**

Day & Date: Tuesday, 17-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory. It should be solved in first 30 minutes in answer Book.  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) According to Parseval's theorem the energy spectral density curve is equal to \_\_\_\_\_.
  - a) Area under magnitude of the signal
  - b) Area under square of the magnitude of the signal
  - c) Area under square root of magnitude of the signal
  - d) None of the mentioned
- 2) Autocorrelation function of periodic signal is equal to \_\_\_\_\_.
  - a) Energy of the signal
  - b) Power of the signal
  - c) Its area in frequency domain
  - d) None of the mentioned
- 3) Autocorrelation function of white noise will have?
  - a) Strong peak
  - b) Infinite peak
  - c) Weak peak
  - d) None of the mentioned
- 4) Rate of convergence is defined by \_\_\_\_\_ of algorithm.
  - a) Time span
  - b) Number of iterations
  - c) Accuracy
  - d) Complexity
- 5) Computational complexity is a measure of \_\_\_\_\_.
  - a) Time
  - b) Number of iterations
  - c) Number of operations
  - d) Accuracy
- 6) Which of the following is a method for implementing a FIR system?
  - a) Direct form
  - b) Cascade form
  - c) Lattice structure
  - d) All of the mentioned
- 7) In IIR Filter design by the Bilinear Transformation, the Bilinear Transformation is a mapping from \_\_\_\_\_.
  - a) Z-plane to S-plane
  - b) S-plane to Z-plane
  - c) S-plane to J-plane
  - d) J-plane to Z-plane
- 8) To what value should the bandwidth of  $x(n)$  has to be reduced in order to avoid aliasing?
  - a)  $F/D$
  - b)  $F/2D$
  - c)  $F/4D$
  - d) None of the mentioned
- 9) The linear filtering operation followed by down sampling on  $x(n)$  is not time invariant.
  - a) True
  - b) False

- 10) Sampling rate conversion by the rational factor  $I/D$  is accomplished by what connection of interpolator and decimator?
- a) Parallel
  - b) Cascade
  - c) Convolution
  - d) None of the mentioned
- 11) Which of the following methods are used in sampling rate conversion of a digital signal?
- a) D/A convertor and A/D convertor
  - b) Performing entirely in digital domain
  - c) None of the mentioned
  - d) Both of the mentioned
- 12) Which of the following is the disadvantage of sampling rate conversion by converting the signal into analog signal?
- a) Signal distortion
  - b) Quantization effects
  - c) New sampling rate can be arbitrarily selected
  - d) Signal distortion & Quantization effects
- 13) Power spectral density function is a \_\_\_\_\_.
- a) Real and even function
  - b) Non negative function
  - c) Periodic
  - d) All of the mentioned
- 14) Power spectrum describes distribution of \_\_\_\_\_ under frequency domain.
- a) Mean
  - b) Variance
  - c) Gaussian
  - d) None of the mentioned

 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**Section – I**

- Q.2 Attempt any two.** **14**
- a) Design an ideal low pass filter with a frequency response.  

$$H_d(e^{jw}) = 1 \text{ for } 0 \leq |w| \leq \pi/4$$

$$= 0 \text{ otherwise}$$
 Find the values for h(n) for N=7.
- b) Explain digital filter banks with polyphase structures.  
 c) Explain FIR Wiener filter for filtering and prediction.
- Q.3 Attempt any two.** **14**
- a) Draw the direct form II structure for the system.  

$$y(n) = -0.1 y(n-1) + 0.72 y(n-2) + 0.7 x(n) - 0.252 x(n-2).$$
- b) Explain Sampling rate conversion using interpolation and decimation.  
 c) Explain AR and ARMA model.

**Section – II**

- Q.4 Attempt any two.** **14**
- a) Explain LMS algorithm used in adaptive filters.  
 b) Explain power spectrum estimation using parametric method.  
 c) Write a note on wavelet transform.
- Q.5 Attempt any two.** **14**
- a) Explain MUSIC algorithm used for spectrum estimation.  
 b) Explain application of adaptive filter for noise cancellation.  
 c) Explain Minimum Mean Square (MMS) criterion in adaptive filters.

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) User data is transferred in which of the frame mode protocol.
  - a) LAPF control
  - b) LAPF core
  - c) Circuit switching
  - d) None
- 2) Basic access means \_\_\_\_\_.
  - a) 30B+1D
  - b) 2B+1D
  - c) both a&b
  - d) None
- 3) The main data channel for ordinary ISDN user is \_\_\_\_\_.
  - a) B channel
  - b) D channel
  - c) H channel
  - d) None
- 4) X.25 is standard for \_\_\_\_\_.
  - a) Frame relay
  - b) Packet switching
  - c) both a&b
  - d) None
- 5) ISDN relies on standard voice data rate of \_\_\_\_\_.
  - a) 192Kbps
  - b) 64Kbps
  - c) 1.5Mbps
  - d) None
- 6) Which of the following is faster but unreliable protocol?
  - a) Frame relay
  - b) Packet switching
  - c) Circuit switching
  - d) None
- 7) Modulation-demodulation is required at every hop of a network using \_\_\_\_\_.
  - a) Bridge
  - b) Analog switch
  - c) Digital switch
  - d) None
- 8) CMI means \_\_\_\_\_ coding.
  - a) Coded marked inversion
  - b) Cell mark integration
  - c) Coding mark integration
  - d) None
- 9) VPI is \_\_\_\_\_ bits at the user network interface.
  - a) 4
  - b) 8
  - c) 12
  - d) 16
- 10) In the SYNC state, the \_\_\_\_\_ is used for error detection and correction.
  - a) HUNT
  - b) Pre sync
  - c) HEC
  - d) DLCI

2) Figures to the right indicate full marks.

**Section – I**

- Q.2 Attempt any four of the following questions. 16**
- a) Explain packet switching along with datagram and virtual circuit approach.
  - b) With diagram explain I series recommendations.
  - c) Write a note on ISDN address structure.
  - d) With suitable diagram explain the effect of packet size on transmission time.
  - e) Compare basic access and primary access of ISDN channel structure.
- Q.3 Attempt any two of the following questions. 12**
- a) Draw and Explain LAPF Control protocol formats.
  - b) Draw, Explain and Compare digital vs. Analog switching.
  - c) Explain ISDN protocols at the user network interface.

**Section – II**

- Q.4 Attempt any four of the following questions. 16**
- a) Explain AAL type I Protocol for ATM.
  - b) What are the different services provided with B-ISDN?
  - c) Write a short note on Header Error control (HEC) mechanism used in ATM.
  - d) With block diagram explain B-ISDN user network interface.
  - e) Explain header format of ATM Cell.
- Q.5 Attempt any two of the following questions. 12**
- a) Write a note on ATM cell processing in a switch.
  - b) Explain B-ISDN architecture.
  - c) Compare virtual channel and virtual path connections of ATM.

**B.E. (Part – II) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**BROAD BAND COMMUNICATION**

Day & Date: Friday, 22-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

**Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**Section – I**

- Q.2 Attempt any four of the following questions. 16**
- a) Explain packet switching along with datagram and virtual circuit approach.
  - b) With diagram explain I series recommendations.
  - c) Write a note on ISDN address structure.
  - d) With suitable diagram explain the effect of packet size on transmission time.
  - e) Compare basic access and primary access of ISDN channel structure.
- Q.3 Attempt any two of the following questions. 12**
- a) Draw and Explain LAPF Control protocol formats.
  - b) Draw, Explain and Compare digital vs. Analog switching.
  - c) Explain ISDN protocols at the user network interface.

**Section – II**

- Q.4 Attempt any four of the following questions. 16**
- a) Explain AAL type I Protocol for ATM.
  - b) What are the different services provided with B-ISDN?
  - c) Write a short note on Header Error control (HEC) mechanism used in ATM.
  - d) With block diagram explain B-ISDN user network interface.
  - e) Explain header format of ATM Cell.
- Q.5 Attempt any two of the following questions. 12**
- a) Write a note on ATM cell processing in a switch.
  - b) Explain B-ISDN architecture.
  - c) Compare virtual channel and virtual path connections of ATM.

**B.E. (Part – II) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**BROAD BAND COMMUNICATION**

Day & Date: Friday, 22-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) In the SYNC state, the \_\_\_\_\_ is used for error detection and correction.
  - a) HUNT
  - b) Pre sync
  - c) HEC
  - d) DLCI
- 2) Email is an example of \_\_\_\_\_ service.
  - a) Interactive
  - b) Distribution
  - c) Broadcast
  - d) None
- 3) AAL type \_\_\_\_\_ deal with constant bit rate source.
  - a) 1
  - b) 2
  - c) 3
  - d) 4
- 4) The initial specifications of AAL type \_\_\_\_\_ and \_\_\_\_\_ were very similar in terms of PDU format and functionality.
  - a) 1, 2
  - b) 2, 3
  - c) 3, 4
  - d) 4, 5
- 5) Which traffic type is used by internet access?
  - a) CBR
  - b) VBR
  - c) ABR
  - d) UBR
- 6) User data is transferred in which of the frame mode protocol.
  - a) LAPF control
  - b) LAPF core
  - c) Circuit switching
  - d) None
- 7) Basic access means \_\_\_\_\_.
  - a) 30B+1D
  - b) 2B+1D
  - c) both a&b
  - d) None
- 8) The main data channel for ordinary ISDN user is \_\_\_\_\_.
  - a) B channel
  - b) D channel
  - c) H channel
  - d) None
- 9) X.25 is standard for \_\_\_\_\_.
  - a) Frame relay
  - b) Packet switching
  - c) both a&b
  - d) None
- 10) ISDN relies on standard voice data rate of \_\_\_\_\_.
  - a) 192Kbps
  - b) 64Kbps
  - c) 1.5Mbps
  - d) None

**B.E. (Part - II) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
MULTIMEDIA COMMUNICATION TECHNIQUES**

Day & Date: Saturday, 23-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.  
2) Figures to right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The number of lines scanned per frame in the raster on the picture tube screen is \_\_\_\_\_.
  - a) 525
  - b) 262
  - c) 20
  - d) 10
- 2) In the frame for which interlaced scanning is used, alternate lines are skipped during vertical scanning because \_\_\_\_\_.
  - a) The trace is slower than the retrace
  - b) The vertical scanning frequency is doubled from 30 to 60 Hz
  - c) The horizontal scanning is slower than vertical scanning
  - d) The frame has a 4:3 aspect ratio
- 3) How many H lines are there in each field?
  - a) 8 ½ lines
  - b) 10 ½ lines
  - c) 262 ½ lines
  - d) 325 lines
- 4) How many H lines are there in each V retrace?
  - a) one
  - b) two
  - c) three
  - d) four
- 5) Which one of the following is false?
  - a) the I video hues are orange or cyan
  - b) The transmitter matrix output includes Y, I, and Q video
  - c) A three-gun picture tube that can serve as a matrix
  - d) A fully saturated color is mostly white
- 6) The color with the most luminance is \_\_\_\_\_.
  - a) Red
  - b) Yellow
  - c) Green
  - d) Blue
- 7) The aspect ratio HDTV is \_\_\_\_\_.
  - a) 4:3
  - b) 18:5
  - c) 14:8
  - d) 16:9
- 8) \_\_\_\_\_ is a standard to allow telephones on the public network to talk to computers connected to the Internet.
  - a) SIP
  - b) H:323
  - c) Q.991
  - d) none of the above

- 9) \_\_\_\_\_ is the protocol designed to handle real-time traffic on the Internet.
- a) TCP
  - b) UDP
  - c) RTP
  - d) none of the above.
- 10) In a real-time video conference, data from the server is \_\_\_\_\_ to the client sites.
- a) Unicast
  - b) Multicast
  - c) Broadcast
  - d) None of the above
- 11) We can divide audio and video services into \_\_\_\_\_ broad categories.
- a) three
  - b) two
  - c) four
  - d) none of the above
- 12) \_\_\_\_\_ audio/video refers to on-demand requests for compressed audio/video files.
- a) Streaming live
  - b) Streaming stored
  - c) Interactive
  - d) None of the above
- 13) A \_\_\_\_\_ adds signals from different sources to create a single signal.
- a) Timestamp
  - b) Sequence number
  - c) Mixer
  - d) None of the above
- 14) A \_\_\_\_\_ changes the format of a high-bandwidth video signal to a lower quality narrow bandwidth signal.
- a) Timestamp
  - b) Sequence number
  - c) Translator
  - d) None of the above

**Instructions:** 1) All questions are compulsory.  
 2) Figures to right indicates full marks.

- Q.2 Attempt any four of the following questions. 16**
- a) Compare Compact and Conventional Discs.
  - b) Explain TV transmitter block diagrams.
  - c) Write Note on:
    - i) Luminance signal
    - ii) Chrominance signal
  - d) With neat block diagram explain Video IF amplifier.
  - e) Write short note on High Definition TV.
- Q.3 Attempt any two of the following questions. 12**
- a) Briefly explain Principle of disc recording and reproduction.
  - b) Write short note on NTSC, SECAM and PAL colour TV systems.
  - c) With neat block diagram explain colour burst circuit.
- Q.4 Attempt any four of the following questions. 16**
- a) What is need of multimedia? Discuss advantages of it.
  - b) Which are the elements of multimedia system?
  - c) Write note on broadband multiservice networks.
  - d) Explain audio compression.
  - e) What is the need of compression? Explain any one technique of image compression.
- Q.5 Attempt any two of the following questions. 12**
- a) Enlist and explain multimedia application.
  - b) Write short note on multimedia networks.
  - c) Compare MPEG-1, MPEG-2, and MPEG-4.

  - d) With neat block diagram explain Video IF amplifier.
  - e) Write short note on High Definition TV.
- Q.3 Attempt any two of the following questions. 12**
- a) Briefly explain Principle of disc recording and reproduction.
  - b) Write short note on NTSC, SECAM and PAL colour TV systems.
  - c) With neat block diagram explain colour burst circuit.
- Q.4 Attempt any four of the following questions. 16**
- a) What is need of multimedia? Discuss advantages of it.
  - b) Which are the elements of multimedia system?
  - c) Write note on broadband multiservice networks.
  - d) Explain audio compression.
  - e) What is the need of compression? Explain any one technique of image compression.
- Q.5 Attempt any two of the following questions. 12**
- a) Enlist and explain multimedia application.
  - b) Write short note on multimedia networks.
  - c) Compare MPEG-1, MPEG-2, and MPEG-4.

**B.E. (Part – II) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**EMBEDDED SYSTEMS**

Day & Date: Monday, 25-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.  
 4) Draw neat diagram whenever necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Where is the return address stored after execution of the Branch-and-Link (BL) instruction in ARM?
  - a) In the stack
  - b) In the register r14
  - c) In the program counter pc
  - d) None of these
- 2) NRE cost can be defined by \_\_\_\_\_.
  - a) The one time monetary cost of designing the system
  - b) Life time cost of system
  - c) Depends upon embedded systems
  - d) None of the above
- 3) ARM uses the thumb\_\_\_\_\_ bit instruction set to improve code density.
  - a) 32
  - b) 8
  - c) 64
  - d) 16
- 4) The\_\_\_\_\_ directive allows the programmer to specify the memory locations where programs, subroutines or the data will resides.
  - a) ALIGN
  - b) AREA
  - c) ENTRY
  - d) END
- 5) In LPC 2148 \_\_\_\_\_ pin select register is used to configure port pins P0.0 to P0.1.15.
  - a) PINSEL1
  - b) PINSEL0
  - c) IODIR2
  - d) IOSET0
- 6) Which of the following instructions are called Program Status Register transfer instructions?
  - a) LDR, STR
  - b) LDM, STM
  - c) MCR, MRC
  - d) MSR, MRS
- 7) A privileged mode allows \_\_\_\_\_.
  - a) Full read access to cpsr
  - b) Full read write access to cpsr
  - c) Full write access to cpsr
  - d) Full read write access to spsr
- 8) Switching the CPU to another process requires to save state of the old process and loading new process state is called \_\_\_\_\_.
  - a) Process blocking
  - b) Context switch
  - c) Time sharing
  - d) None of above

- 9) Semaphore are used to \_\_\_\_\_.
- a) Signal the occurrence of event
  - b) Show interfacing between input and output devices
  - c) Provide memory management
  - d) None of the above
- 10) Which is the core of the OS?
- a) shell
  - b) Kernel
  - c) Commands
  - d) Scripts
- 11) Race around condition can be avoided by using \_\_\_\_\_.
- a) Semaphore
  - b) Mutex
  - c) Socket
  - d) both a and b
- 12) Information about a task is maintained in a \_\_\_\_\_.
- a) Stack
  - b) Translation look aside buffer
  - c) Task control block
  - d) Task
- 13) Which type of following OS the response time is critical?
- a) Network operating System
  - b) Real Time operating System
  - c) Batch OS
  - d) Unix operating system
- 14) Which one of the following is an important objective of a real-time operating system?
- a) Maximization of throughput
  - b) Guaranteeing fairness in task executions
  - c) Minimization of the response time of tasks
  - d) Production of the result of a task within a certain stipulated time period

**B.E. (Part – II) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**EMBEDDED SYSTEMS**

Day & Date: Monday, 25-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.  
 4) Draw neat diagram whenever necessary.

**Section – I**

- Q.2 Attempt any four.** **16**
- a) What are design metrics? Explain any one in detail. How to optimize design metrics?
  - b) How many states of ARM according to instruction set? Differentiate between them and Explain four instructions of any one state.
  - c) Explain on chip DAC of LPC2148 using associated register.
  - d) Why CAN bus protocol is widely used in industrial automation? With the help of diagram explain CAN bus protocol.
  - e) Explain the role of AMBA bus in LPC2148.
- Q.3 Attempt any two.** **12**
- a) Draw and explain ARM core data flow model of ARM core.
  - b) Explain the concept of memory management in ARM core.
  - c) Explain SPI and SCI communication protocols.

**Section – II**

- Q.4 Attempt any four.** **16**
- a) List features of UCOSII RTOs.
  - b) Write an embedded C code to demonstrate operation of on-chip DAC of LPC2148.
  - c) What are the services provided by desktop or traditional OS?
  - d) Write the algorithm to interface to 4X4 matrix keypad to LPC2148 along with necessary registers.
  - e) Explain digital camera as embedded system. How to measure its performance?
- Q.5 Attempt any two.** **12**
- a) With suitable example explain the role of semaphore in Operating system.
  - b) Draw and explain interfacing of 16X2 LCD with LPC2148 for following specifications:
    - 1) Use P0.5 as RS and En respectively (Control bus).
    - 2) Use P1.16 to P1.23 as data bus (D0-D7).
 Write an embedded C program to display "Welcome".
  - c) Explain memory management in RTOs.

- 8) Where is the return address stored after execution of the Branch-and-Link (BL) instruction in ARM?
- a) In the stack
  - b) In the register r14
  - c) In the program counter pc
  - d) None of these
- 9) NRE cost can be defined by \_\_\_\_\_.
- a) The one time monetary cost of designing the system

2) Figures to the right indicate full marks.  
3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) \_\_\_\_\_ routes user queries or commands to appropriate nodes in sensor.
  - a) bridge
  - b) gateway
  - c) Node
  - d) None of these
- 2) \_\_\_\_\_ is a basic unit with on board sensors, processor, memory, wireless modem and power supply.
  - a) sensor
  - b) sensor node
  - c) routing
  - d) none of the above
- 3) \_\_\_\_\_ based protocol do not divide channel into sub-channels or pre-allocate the channel for each node use.
  - a) Contention
  - b) Schedule
  - c) RFID
  - d) None of the above
- 4) LEACH is example of \_\_\_\_\_.
  - a) Contention
  - b) Schedule
  - c) RFID
  - d) None of the above
- 5) Main role of time synchronization in distributed networks is to \_\_\_\_\_.
  - a) Ensure common time scale for all network nodes
  - b) Provide right temporal co-ordination among all nodes
  - c) both a) & b)
  - d) None of above
- 6) In wireless adhoc network \_\_\_\_\_.
  - a) access point is not required
  - b) access point is required
  - c) nodes are not required
  - d) none of the above
- 7) Clustering in WSN contribute to \_\_\_\_\_.
  - a) System scalability
  - b) Life time
  - c) Energy efficiency
  - d) All of above
- 8) In WSNs, \_\_\_\_\_ mobility is viewed.
  - a) Node
  - b) Sink
  - c) Event
  - d) All of the above
- 9) RFID stands for \_\_\_\_\_.
  - a) Radio Frequency Identification
  - b) Radio first identification
  - c) both a)&b)
  - d) None of above

- 10) \_\_\_\_\_ is the main concern in designing time synchronization protocols.
- |                      |                      |
|----------------------|----------------------|
| a) Energy efficiency | b) Power consumption |
| c) Both (a) and (b)  | d) None of the above |
- 11) Performance of time synchronization protocol is closely related with \_\_\_\_\_.
- |                     |                      |
|---------------------|----------------------|
| a) network topology | b) power             |
| c) frames           | d) none of the above |
- 12) \_\_\_\_\_ MAC protocol is widely used in modern cellular communication systems.
- |         |                     |
|---------|---------------------|
| a) TDMA | b) FDMA             |
| c) CDMA | d) All of the above |
- 13) \_\_\_\_\_ is the interference caused when radio waves of one device distorts the waves of another.
- |                     |                      |

WIRELESS SENSOR NETWORK**

Day & Date: Tuesday, 26-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full marks.  
3) Assume suitable data if necessary.

**Section – I**

- Q.2 Attempt any four. 16**
- a) What are the applications of WSN and Mobile adhoc networks?
  - b) Explain the various hardware components of Single Node architecture.
  - c) Explain Figures of Merit.
  - d) Explain the optimization goals of network architecture.
  - e) Write a short note on clustering.
- Q.3 Attempt any two. 12**
- a) Explain in brief about energy Consumption of Sensor nodes.
  - b) What are the major issues and challenges that need to be considered for designing adhoc wireless system?
  - c) Explain the various Enabling Technologies for Wireless Sensor Networks. Mention the various applications of WSN.

**Section – II**

- Q.4 Attempt any four. 16**
- a) Explain the concept of low duty cycle in MAC protocol
  - b) Explain any one schedule based protocol.
  - c) Write a note on Antenna directivity and gain.
  - d) Explain the use of RFID in health care.
  - e) What are the different aspects of EMC?
- Q.5 Attempt any two. 12**
- a) Explain in brief any two contention based protocols.
  - b) Explain EMC Requirements for Electronic Systems.
  - c) Explain the application of RFID in identification and data capture.

**B.E. (Part – II) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**WIRELESS SENSOR NETWORK**

Day & Date: Tuesday, 26-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) In WSNs, \_\_\_\_\_ mobility is viewed.
 

|          |                     |
|----------|---------------------|
| a) Node  | b) Sink             |
| c) Event | d) All of the above |
- 2) RFID stands for \_\_\_\_\_.
 

|                                   |                               |
|-----------------------------------|-------------------------------|
| a) Radio Frequency Identification | b) Radio first identification |
| c) both a)&b)                     | d) None of above              |
- 3) \_\_\_\_\_ is the main concern in designing time synchronization protocols.
 

|                      |                      |
|----------------------|----------------------|
| a) Energy efficiency | b) Power consumption |
| c) Both (a) and (b)  | d) None of the above |
- 4) Performance of time synchronization protocol is closely related with \_\_\_\_\_.
 

|                     |                      |
|---------------------|----------------------|
| a) network topology | b) power             |
| c) frames           | d) none of the above |
- 5) \_\_\_\_\_ MAC protocol is widely used in modern cellular communication systems.
 

|         |                     |
|---------|---------------------|
| a) TDMA | b) FDMA             |
| c) CDMA | d) All of the above |
- 6) \_\_\_\_\_ is the interference caused when radio waves of one device distorts the waves of another.
 

|                     |                      |
|---------------------|----------------------|
| a) EMI              | b) EMC               |
| c) Both (a) and (b) | d) None of the above |
- 7) \_\_\_\_\_ is the application of RFID.
 

|                                    |                     |
|------------------------------------|---------------------|
| a) Identification and data capture | b) Health-care      |
| c) Massive incidents               | d) All of the above |
- 8) \_\_\_\_\_ routes user queries or commands to appropriate nodes in sensor.
 

|           |                  |
|-----------|------------------|
| a) bridge | b) gateway       |
| c) Node   | d) None of these |
- 9) \_\_\_\_\_ is a basic unit with on board sensors, processor, memory, wireless modem and power supply.
 

|            |                      |
|------------|----------------------|
| a) sensor  | b) sensor node       |
| c) routing | d) none of the above |

- 10) \_\_\_\_ based protocol do not divide channel into sub-channels or pre-allocate the channel for each node use.
- a) Contention
  - b) Schedule
  - c) RFID
  - d) None of the above
- 11) LEACH is example of \_\_\_\_.
- a) Contention
  - b) Schedule
  - c) RFID
  - d) None of the above
- 12) Main role of time synchronization in distributed networks is to \_\_\_\_.
- a) Ensure common time scale for all network nodes
  - b) Provide right temporal co-ordination among all nodes
  - c) both a) & b)
  - d) None of above
- 13) In wireless adhoc network \_\_\_\_.
- a) access point is not required
  - b) access point is required
  - c) nodes are not required
  - d) none of the above
- 14) Clustering in WSN contribute to \_\_\_\_.
- a) System scalability
  - b) Life time
  - c) Energy efficiency
  - d) All of above

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.**

**14**

- 1) In \_\_\_\_\_ learning number of classes are known.
  - a) Unsupervised
  - b) Supervised
  - c) Both of these
  - d) None of these
- 2) The density estimation in which the volume  $V_n$  is shrunk according to function  $V_n = \frac{1}{\sqrt{n}}$  is called
  - a) Kn-nearest neighbor
  - b) Bayesian estimation
  - c) Parzen window
  - d) All of the above
- 3) Determining sequence of hidden states for given HMM and visible states is called
  - a) Evaluation problem
  - b) Decoding problem
  - c) Learning problem
  - d) All of these
- 4) Production rules represent a wide variety of knowledge representations that are based on \_\_\_\_\_
  - a) Condition only
  - b) Action only
  - c) condition-action pairs
  - d) None of these
- 5) Triangle Inequality property of distance metric is given as
  - a)  $D(a, b) + D(b, c) \geq D(a, c)$
  - b)  $D(a, b) \geq 0$
  - c)  $D(a, b) = D(b, a)$
  - d) None of these
- 6) In Statistical pattern recognition, the block 'Construction of formal description' is based on
  - a) The experience of the designer
  - b) Intuition of the designer
  - c) Both a and b
  - d) Neither a and b
- 7) A random variable that takes on an infinite number of values is known as a \_\_\_\_\_
  - a) Independent random variable
  - b) Discrete random variable
  - c) Continuous random variable
  - d) None of the above

- 8) Our productions of any sequence is described by the transition probabilities\_\_\_\_\_
- a)  $P(\omega_j(t+1)|\omega_i(t)) = b_{ij}$                       b)  $P(\omega_j(t+1)|\omega_i(t)) = b_{jk}$   
c)  $P(\omega_j(t+1)|\omega_i(t)) = a_{ij}$                       d)  $P(v_k(t)|\omega_j(t)) = b_{jk}$
- 9) Parzen-window classifier depends upon the choice of
- a) No. of sample points                      b) Window function  
c) Both a and b                                      d) None of the above
- 10) Wards method is also named as the\_\_\_\_\_ Method.
- a) Maximum of squared variance    b) Minimum of squared variance  
c) Maximum Variance                      d) Minimum Variance
- 11) Simulated annealing consists of downhill iteration steps combined with controlled uphill steps that make it possible to escape from\_\_\_\_\_
- a) local minima                                      b) global minima  
c) local maxima                                      d) global maxima
- 12) Classifier that places a pattern in one of only two categories is called
- a) Chotomizer                                      b) Trichomizer  
c) Economizer                                      d) Dichotomizer
- 13) Syntactic Recognition Algorithm consists of following steps\_\_\_\_\_
- a) Learning, Recognition, Classification  
b) Learning, Construct a description grammar, Recognition, Classification  
c) Construct a description grammar, Recognition, Classification  
d) Learning, Construct a description grammar, Classification
- 14) The loss function  $\lambda(\alpha_i|w_j)$  describes the loss incurred for taking action  $\alpha_i$  when the state of the nature is  $w_j$  has value equal to \_\_\_\_\_.
- a) 0 when  $i = j$                                       b) 2 when  $i = j$   
c) 1 when  $i = j$                                       d) 0 when  $i \neq j$

PATTEERN RECOGNITION**

Day & Date: Tuesday, 26-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
2) Figures to the right indicate full marks.  
3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.**

**14**

- 1) Triangle Inequality property of distance metric is given as
 

|                                     |                     |
|-------------------------------------|---------------------|
| a) $D(a, b) + D(b, c) \geq D(a, c)$ | b) $D(a, b) \geq 0$ |
| c) $D(a, b) = D(b, a)$              | d) None of these    |
- 2) In Statistical pattern recognition, the block 'Construction of formal description' is based on
  - a) The experience of the designer
  - b) Intuition of the designer
  - c) Both a and b
  - d) Neither a and b
- 3) A random variable that takes on an infinite number of values is known as a \_\_\_\_\_
 

|                                |                             |
|--------------------------------|-----------------------------|
| a) Independent random variable | b) Discrete random variable |
| c) Continuous random variable  | d) None of the above        |
- 4) Our productions of any sequence is described by the transition probabilities \_\_\_\_\_
 

|                                              |                                              |
|----------------------------------------------|----------------------------------------------|
| a) $P(\omega_j(t+1)   \omega_i(t)) = b_{ij}$ | b) $P(\omega_j(t+1)   \omega_i(t)) = b_{jk}$ |
| c) $P(\omega_j(t+1)   \omega_i(t)) = a_{ij}$ | d) $P(v_k(t)   \omega_j(t)) = b_{jk}$        |
- 5) Parzen-window classifier depends upon the choice of
 

|                         |                      |
|-------------------------|----------------------|
| a) No. of sample points | b) Window function   |
| c) Both a and b         | d) None of the above |
- 6) Wards method is also named as the \_\_\_\_\_ Method.
 

|                                |                                |
|--------------------------------|--------------------------------|
| a) Maximum of squared variance | b) Minimum of squared variance |
| c) Maximum Variance            | d) Minimum Variance            |
- 7) Simulated annealing consists of downhill iteration steps combined with controlled uphill steps that make it possible to escape from \_\_\_\_\_
 

|                 |                  |
|-----------------|------------------|
| a) local minima | b) global minima |
| c) local maxima | d) global maxima |
- 8) Classifier that places a pattern in one of only two categories is called
 

|               |                 |
|---------------|-----------------|
| a) Chotomizer | b) Trichomizer  |
| c) Economizer | d) Dichotomizer |

- 9) Syntactic Recognition Algorithm consists of following steps\_\_\_\_\_
- a) Learning, Recognition, Classification
  - b) Learning, Construct a description grammar, Recognition, Classification
  - c) Construct a description grammar, Recognition, Classification
  - d) Learning, Construct a description grammar, Classification
- 10) The loss function  $\lambda(\alpha_i|w_j)$  describes the loss incurred for taking action  $\alpha_i$  when the state of the nature is  $w_j$  has value equal to \_\_\_\_\_.
- a) 0 when  $i = j$
  - b) 2 when  $i = j$
  - c) 1 when  $i = j$
  - d) 0 when  $i \neq j$
- 11) In \_\_\_\_\_ learning number of classes are known.
- a) Unsupervised
  - b) Supervised
  - c) Both of these
  - d) None of these
- 12) The density estimation in which the volume  $V_n$  is shrunk according to function  $V_n = \frac{1}{\sqrt{n}}$  is called
- a) Kn-nearest neighbor
  - b) Bayesian estimation
  - c) Parzen window
  - d) All of the above
- 13) Determining sequence of hidden states for given HMM and visible states is called
- a) Evaluation problem
  - b) Decoding problem
  - c) Learning problem
  - d) All of these
- 14) Production rules represent a wide variety of knowledge representations that are based on\_\_\_\_\_
- a) Condition only
  - b) Action only
  - c) condition-action pairs
  - d) None of these

Set **R**

**B.E. (Part – II) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**PATTEERN RECOGNITION (Elective – II)**

Day & Date: Tuesday, 26-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

**Q.2 Attempt any three** **12**

- a) Suppose that the Random variables  $X$  &  $Y$  have the joint density function defined by  $f(x, y) = c(2x + y)$   $2 < x < 6$  &  $0 < y < 5$   
 $= 0$  *otherwise*

Find : 1) constant  $c$ , 2)  $P(X > 3, Y > 2)$

- b) Explain Maximum Likelihood Estimation. Note on the Gaussian Case where  $\mu$  is unknown and covariance matrix ( $\Sigma$ ) is known.  
 c) Write a short note on supervised learning.  
 d) Explain accuracy and computational complexity of classifier.  
 e) Draw the histogram of Lightness feature for the fish categorization and explain in brief.

**Q.3 Attempt any two.** **16**

- a) Explain the equation of conditional risk and overall risk. Comment on the condition at which overall risk is called as Bayes Risk.  
 b) The joint probability function of two random variable  $X$  and  $Y$  is given by  
 $f(x, y) = c(x^2 + 2y)$ ,  $x = 0, 1, 2, y = 1, 2, 3, 4$   
 $= 0$  *, otherwise*

Find :

- 1) the value of  $c$  2) marginal probability functions of  $X$  &  $Y$   
 3)  $f(y/1)$ , 4)  $f(X/2)$   
 c) Explain Hidden Markov models (HMM) and give HMM forward algorithm.

**Section – II**

**Q.4 Attempt any three.** **12**

- a) Write a note on Probabilistic Neural Network.  
 b) Write a note on Agglomerative Clustering.  
 c) What is K- nearest neighbor rule?  
 d) Explain Forgy's clustering.  
 e) Explain feed - forward network

**Q.5 Attempt any two.** **16**

- a) Explain fuzzy Optimization technique in recognition.  
 b) Write a note on Neural Networks.  
 c) Starting from fundamentals derive an expression for density estimation

$$P_n(x) = \frac{K_n/n}{V_n}$$

|          |  |

**DSP PROCESSORS & APPLICATION**

Day & Date: Tuesday, 26-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Assume the suitable data if necessary.

**SECTION – I**

- Q.2 Attempt any four:** **16**
- a) Explain in detail signals and coefficients in DSP Systems.
  - b) Draw and explain briefly VLIW architecture.
  - c) Which are the special addressing modes of p-DSPs with suitable example?
  - d) Explain multiplier and multiplier accumulator of DSP.
  - e) Explain in detail D/A conversion errors in DSP Systems.
- Q.3 Attempt any two:** **12**
- a) Draw & explain Architecture of TMS320C5X Processor.
  - b) Draw & Explain Block Diagram of DSP Starter Kit.
  - c) Describe briefly Pipeline structure and operation TMS320C5X Processor.

**SECTION – II**

- Q.4 Attempt any four:** **16**
- a) Explain in detail Data Addressing Modes of TMS320C54XX DSP.
  - b) Explain the steps required for running a C54X assembly language in code composer studio.
  - c) Write short note on C54X.
  - d) Compare the feature of TMS320C6X and DSP563XX Processor.
  - e) Describe briefly Interrupts of TMS320C54XX Processor.
- Q.5 Attempt any two.** **12**
- a) Write the Program for convolutional codes using C54X program.
  - b) Explain Pipeline operation in C54X.
  - c) Draw & explain Architecture of Motorola DSP563XX.

Day & Date: Tuesday, 26-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q.No.1 is compulsory and should be solved in first 30 Minutes in answer Book Page No.3. Each question carries one mark.  
2) Assume suitable data if necessary.  
3) Answer MCQ/Objective type questions on page No.3 only. Don't forget to Mention, Q.P. Set (P/Q/R/S) on Top of page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The Memory mapped direct addressing mode is used to access data in page.
 

|        |        |
|--------|--------|
| a) 0   | b) 1   |
| c) 511 | d) 512 |
- 2) The register which holds the address of the current data memory page is \_\_\_\_\_.
 

|        |         |
|--------|---------|
| a) ARP | b) DP   |
| c) ARB | d) None |
- 3) The size of the C6X CPU is \_\_\_\_\_.
 

|           |           |
|-----------|-----------|
| a) 16-bit | b) 32-bit |
| c) 40-bit | d) 64-bit |
- 4) The floating point devices in C6X processors are \_\_\_\_\_.
 

|         |                |
|---------|----------------|
| a) C67X | b) C62X        |
| c) C64X | d) C64X & C62X |
- 5) The C6X processor based on \_\_\_\_\_ architecture.
 

|                     |                     |
|---------------------|---------------------|
| a) Modified Harvard | b) Advanced Harvard |
| c) Veloci TI        | d) Davinci          |
- 6) \_\_\_\_\_ C54X assembler directive reserves and initializes n bits of memory and when a label is used with this directive, the label is assigned the address of the first word of the block reserved.
 

|          |           |
|----------|-----------|
| a) .bes  | b) .space |
| c) .word | d) .data  |
- 7) The external SRAM capacity in C5402 kit is \_\_\_\_\_ words and requires \_\_\_\_\_ wait states.
 

|           |           |
|-----------|-----------|
| a) 64K,1  | b) 64K,7  |
| c) 256K,1 | d) 256K,7 |

- 8) The Addressing that permits the content in internal register of the CPU & I/O to be accessed as memory location is \_\_\_\_\_.  
a) Memory Mapped                                  b) Indirect addressing  
c) Circular Mode                                  d) Bit Reversed Addressing
- 9) The addressing mode that is convenient for FFT computation is \_\_\_\_\_.  
a) Indirect addressing                                  b) Circular Mode  
c) Memory Mapped                                  d) Bit Reversed Addressing
- 10) The number of instruction cycles required for executing a program in a microprocessor with no pipelining is \_\_\_\_\_.  
a) 4                                                  b) 2  
c) 3                                                  d) 1
- 11) A P-DSP has four pipeline stages and uses four phase clock. The number of clock cycles required for executing a program with 25 instruction is \_\_\_\_\_.  
a) 29                                                  b) 28  
c) 25                                                  d) 26
- 12) VLIW architecture differs from conventional P-DSP in which of the following aspects \_\_\_\_\_.  
a) Instruction cache  
b) Number of Functional Units  
c) Using Pipelining  
d) A single word fetched from memory has a number of instructions
- 13) Number of memory accesses /clock/period that can be achieved using on chip DRAM of a P-DSP is \_\_\_\_\_.  
a) 1                                                  b) 2  
c) 4                                                  d) 3
- 14) The features in which PDSP is superior to advanced microprocessors is \_\_\_\_\_.  
a) Real time I/O capability                                  b) Low cost  
c) Low Power                                          d) Computational Speed

Day & Date: Tuesday, 26-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

**Instructions:** 1) All questions are compulsory.  
2) Assume the suitable data if necessary.

**SECTION – I**

- Q.2 Attempt any four:** **16**
- a) Explain in detail signals and coefficients in DSP Systems.
  - b) Draw and explain briefly VLIW architecture.
  - c) Which are the special addressing modes of p-DSPs with suitable example?
  - d) Explain multiplier and multiplier accumulator of DSP.
  - e) Explain in detail D/A conversion errors in DSP Systems.
- Q.3 Attempt any two:** **12**
- a) Draw & explain Architecture of TMS320C5X Processor.
  - b) Draw & Explain Block Diagram of DSP Starter Kit.
  - c) Describe briefly Pipeline structure and operation TMS320C5X Processor.

**SECTION – II**

- Q.4 Attempt any four:** **16**
- a) Explain in detail Data Addressing Modes of TMS320C54XX DSP.
  - b) Explain the steps required for running a C54X assembly language in code composer studio.
  - c) Write short note on C54X.
  - d) Compare the feature of TMS320C6X and DSP563XX Processor.
  - e) Describe briefly Interrupts of TMS320C54XX Processor.
- Q.5 Attempt any two.** **12**
- a) Write the Program for convolutional codes using C54X program.
  - b) Explain Pipeline operation in C54X.
  - c) Draw & explain Architecture of Motorola DSP563XX.

**B.E. (Part -II) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
DSP PROCESSORS & APPLICATION**

Day & Date: Tuesday, 26-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q.No.1 is compulsory and should be solved in first 30 Minutes in answer Book Page No.3. Each question carries one mark.  
2) Assume suitable data if necessary.  
3) Answer MCQ/Objective type questions on page No.3 only. Don't forget to Mention, Q.P. Set (P/Q/R/S) on Top of page.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** **14**

- 10) The size of the C6X CPU is \_\_\_\_\_.
  - a) 16-bit
  - b) 32-bit
  - c) 40-bit
  - d) 64-bit
- 2) The floating point devices in C6X processors are \_\_\_\_\_.
  - a) C67X
  - b) C62X
  - c) C64X
  - d) C64X & C62X
- 3) The C6X processor based on \_\_\_\_\_ architecture.
  - a) Modified Harvard
  - b) Advanced Harvard
  - c) Veloci TI
  - d) Davinci
- 4) \_\_\_\_\_ C54X assembler directive reserves and initializes n bits of memory and when a label is used with this directive, the label is assigned the address of the first word of the block reserved.
  - a) .bes
  - b) .space
  - c) .word
  - d) .data
- 5) The external SRAM capacity in C5402 kit is \_\_\_\_\_ words and requires \_\_\_\_\_ wait states.
  - a) 64K,1
  - b) 64K,7
  - c) 256K,1
  - d) 256K,7
- 6) The Addressing that permits the content in internal register of the CPU & I/O to be accessed as memory location is \_\_\_\_\_.
  - a) Memory Mapped
  - b) Indirect addressing
  - c) Circular Mode
  - d) Bit Reversed Addressing
- 7) The addressing mode that is convenient for FFT computation is \_\_\_\_\_.
  - a) Indirect addressing
  - b) Circular Mode
  - c) Memory Mapped
  - d) Bit Reversed Addressing
- 8) The number of instruction cycles required for executing a program in a microprocessor with no pipelining is \_\_\_\_\_.
  - a) 4
  - b) 2
  - c) 3
  - d) 1

**B.E. (Part -II) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**DSP PROCESSORS & APPLICATION**

Day & Date: Tuesday, 26-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

**Instructions:** 1) All questions are compulsory.  
 2) Assume the suitable data if necessary.

**SECTION – I**

- Q.2 Attempt any four:** **16**
- a) Explain in detail signals and coefficients in DSP Systems.
  - b) Draw and explain briefly VLIW architecture.
  - c) Which are the special addressing modes of p-DSPs with suitable example?
  - d) Explain multiplier and multiplier accumulator of DSP.
  - e) Explain in detail D/A conversion errors in DSP Systems.
- Q.3 Attempt any two:** **12**
- a) Draw & explain Architecture of TMS320C5X Processor.
  - b) Draw & Explain Block Diagram of DSP Starter Kit.
  - c) Describe briefly Pipeline structure and operation TMS320C5X Processor.

**SECTION – II**

- Q.4 Attempt any four:** **16**
- a) Explain in detail Data Addressing Modes of TMS320C54XX DSP.
  - b) Explain the steps required for running a C54X assembly language in code composer studio.
  - c) Write short note on C54X.
  - d) Compare the feature of TMS320C6X and DSP563XX Processor.
  - e) Describe briefly Interrupts of TMS320C54XX Processor.
- Q.5 Attempt any two.** **12**
- a) Write the Program for convolutional codes using C54X program.
  - b) Explain Pipeline operation in C54X.
  - c) Draw & explain Architecture of Motorola DSP563XX.

**INTERNET OF THINGS**

Day & Date: Tuesday, 26-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) As per IoT conceptual framework, Gather + Enrich + Stream + Manage + Acquire + Organise & Analyse = \_\_\_\_\_  
 a) Things framework                      b) Network of Things  
 c) Internet of Things                      d) Internet
- 2) As per IoT architectural view suggested by CISCO level-3 deals with, \_\_\_\_\_.  
 a) Data abstraction                      b) Data accumulation  
 c) Edge computing                      d) Connectivity
- 3) Why is IPv6 preferred over IPv4 for IoT implementations?  
 a) Larger addressing range              b) More security  
 c) Both a and b                          d) Neither a or b
- 4) The paging operation of a Bluetooth device is used for \_\_\_\_\_.  
 a) Forming a connection between two Bluetooth devices  
 b) Trying to discover other devices near it  
 c) Entering a low-power sleep mode  
 d) All of these
- 5) Which of these can be considered as the sensory organs for IoT?  
 a) Buildings                                  b) Transportation  
 c) Banks                                      d) Sensors
- 6) The address space in ARM is \_\_\_\_\_.  
 a)  $2^{24}$                                       b)  $2^{64}$   
 c)  $2^{16}$                                       d)  $2^{32}$
- 7) A programmable timer device used to ensure that processor is running is \_\_\_\_\_.  
 a) Real Time Clock                      b) Phase Lock Loop  
 c) Watchdog Timer                      d) Simulation Time Clock
- 8) LPC1768's maximum operating frequency is \_\_\_\_\_.  
 a) 100MHz                                  b) 110MHz  
 c) 12MHz                                    d) 60MHz
- 9) Which of these statements is NOT TRUE?  
 a) MQTT is a publish-subscribe protocol  
 b) MQTT is a client-server protocol  
 c) MQTT is a lightweight messaging protocol  
 d) MQTT is used in conjunction with TCP/IP

- 10) MQTT is designed for \_\_\_\_\_.  
a) Remote connections                      b) Limited bandwidth  
c) Small-code footprint                      d) All of these
- 11) Which layer is CoAP?  
a) Control layer                                b) Transport layer  
c) Service layer                                d) Application layer
- 12) Wifi enabled device can be \_\_\_\_\_.  
a) PC                                              b) Game Console  
c) Mobile phone                                d) All of the above
- 13) CoAP is a specialized \_\_\_\_\_ protocol.  
a) Web Transfer                                b) Power  
c) Application                                 d) Resource
- 14) What is A2DP?  
a) Bluetooth profile for streaming audio  
b) Bluetooth profile for security  
c) Bluetooth profile for streaming video  
d) None of These

Day & Date: Tuesday, 26-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

- Q.2 Attempt any four. 16**
- a) List the components available in Intel based intelligent gateway for a smart home.
  - b) Show the comparison between OSI layer and ITU-T reference model layers.
  - c) Explain UART and I2C bus interfaces. When and where these interfaces are used?
  - d) Write an ARM ASM code to find length of null terminated string.
  - e) Discuss the operation modes and privilege levels supported in Cortex-M3 processor with neat diagram.
- Q.3 Attempt any two. 12**
- a) Discuss how 15 branch conditions are defined with the combinations of the four flags (N, Z, C, and V).
  - b) Give example of IoT's used in a smart home with sensors, actuators and smart home automation software.
  - c) Draw and explain ARM Cortex-M3 processor architecture in detail with a neat diagram.

**Section – II**

- Q.4 Attempt any four. 16**
- a) List down principal components and topologies in a Zigbee network.
  - b) Discuss with neat diagram the IEEE 802.11 protocol stack.
  - c) Write short note on Message Oriented Middleware (MOM) protocols.
  - d) Discuss what is meant by RESTful protocol with an example.
  - e) What is MQTT protocol? List down the requirements provided by MQTT protocol.
- Q.5 Attempt any two. 12**
- a) Discuss the architecture of CoAP system.
  - b) With neat diagram illustrate the differences in management of cloud models.
  - c) **Write a short note on:**
    - 1) RFID tags
    - 2) RFID Interrogators
    - 3) RFID Controllers
    - 4) RFID frequency bands

Day & Date: Saturday, 07-12-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

**Instructions:** 1) Q. No.1 is compulsory should be solved in first 30 minutes in answer book.

2) Figures to the right indicate full marks.

3) Use of non-programmable calculator is allowed.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The particular Integral of  $(D + 1)^3 y = e^{-x}$  is \_\_\_\_\_.
 

|                            |                           |
|----------------------------|---------------------------|
| a) $\frac{x^3}{3!} e^{-x}$ | b) $\frac{x^2}{2} e^{-x}$ |
| c) $x e^x$                 | d) None of these          |
  
- 2) The complete solution of  $(D^4 + 6D^2 + 9)y = 0$  is \_\_\_\_\_.
 

|                                                                      |                                                        |
|----------------------------------------------------------------------|--------------------------------------------------------|
| a) $y = (c_1 + c_2 x) e^x + (c_3 + c_4 x) e^{-x}$                    | b) $y = (c_1 + c_2) e^x + (c_3 + c_4 x) e^{-x}$        |
| c) $y = (c_1 + c_2 x) \cos \sqrt{3}x + (c_3 + c_4 x) \sin \sqrt{3}x$ | d) $y = (c_1 + c_2 x) \cos 3x + (c_3 + c_4 x) \sin 3x$ |
  
- 3) The solution of  $px + qy = z$  is \_\_\_\_\_.
 

|                                                        |                                                    |
|--------------------------------------------------------|----------------------------------------------------|
| a) $\phi(x + y, y + z) = 0$                            | b) $\phi\left(\frac{x}{y}, \frac{y}{z}\right) = 0$ |
| c) $\phi\left(\frac{x^2}{y}, \frac{y^2}{z}\right) = 0$ | d) $\phi(xy, yz) = 0$                              |
  
- 4) The value of the integral  $\int_0^{\infty} e^{-3t} \sin t dt$  is \_\_\_\_\_.
 

|       |                   |
|-------|-------------------|
| a) 5  | b) $\frac{1}{5}$  |
| c) 10 | d) $\frac{1}{10}$ |
  
- 5) The Laplace transform of  $(\sin t + \cos t)^2$  is \_\_\_\_\_.
 

|                                    |                                    |
|------------------------------------|------------------------------------|
| a) $\frac{1}{s} - \frac{2}{s^2+4}$ | b) $\frac{1}{s} + \frac{2}{s^2+4}$ |
| c) $\frac{1}{s} - \frac{2}{s^2-4}$ | d) $\frac{1}{s} + \frac{2}{s^2-4}$ |
  
- 6)  $\frac{1}{(s+3)^2}$  is the Laplace transform of \_\_\_\_\_.
 

|                |                  |
|----------------|------------------|
| a) $t e^{-3t}$ | b) $t^2 e^{-3t}$ |
| c) $e^{-3t}$   | d) $t e^{3t}$    |
  
- 7)  $L^{-1}\left\{\frac{1}{s^2-6s+25}\right\} =$  \_\_\_\_\_.
 

|                                |                                |
|--------------------------------|--------------------------------|
| a) $\frac{e^{-3t}}{4} \sin 4t$ | b) $\frac{e^{-3t} \cos 4t}{4}$ |
| c) $e^{-3t} \sin 4t$           | d) $\frac{e^{3t} \sin 4t}{4}$  |

- 8) The directional derivative of  $\phi = xy + yz + zx$  at  $(1,1,1)$  is maximum in the direction of \_\_\_\_\_.
- |                   |                   |
|-------------------|-------------------|
| a) $i + j + k$    | b) $i - j + k$    |
| c) $2i + 2j + 2k$ | d) $2i - 2j + 2k$ |
- 9) If  $\vec{r} = xi + yj + zk$  and  $\vec{a}$  is a constant vector then  $\nabla(\vec{a} \cdot \vec{r}) = \text{_____}$ .
- |                            |              |
|----------------------------|--------------|
| a) $\vec{a}$               | b) $\vec{r}$ |
| c) $\vec{a} \cdot \vec{r}$ | d) 0         |
- 10) If  $z\{a^k\} = \frac{z}{z-a}$  then  $z\{k \cdot a^k\} = \text{_____}$ .
- |                        |                         |
|------------------------|-------------------------|
| a) $\frac{a}{(z-a)^2}$ | b) $\frac{az}{(z-a)^2}$ |
| c) $\frac{z}{(z-a)^2}$ | d) $\frac{-1}{(z-a)^2}$ |
- 11) The inverse z-transform of  $\frac{z}{z-1}$ ,  $|z| > 1$  is \_\_\_\_\_.
- |       |      |
|-------|------|
| a) -1 | b) 1 |
| c) 0  | d) K |
- 12) If  $f(x) = x$  is represented by Fourier series in  $(-\pi, \pi)$  then \_\_\_\_\_ is the constant term.
- |                    |           |
|--------------------|-----------|
| a) $\frac{\pi}{2}$ | b) $\pi$  |
| c) 0               | d) $2\pi$ |
- 13) For Fourier series expansion, function must be \_\_\_\_\_.
- |             |             |
|-------------|-------------|
| a) Harmonic | b) Riemann  |
| c) Cauchy   | d) Periodic |
- 14) The Fourier sine transform of  $f(x) = \begin{cases} 1, & 0 \leq x < 1 \\ 0, & x > 1 \end{cases}$  is \_\_\_\_\_.
- |                                                             |                                                             |
|-------------------------------------------------------------|-------------------------------------------------------------|
| a) $\sqrt{\frac{2}{\pi}}$                                   | b) $\sqrt{\frac{2}{\pi}} (1 - \cos s)$                      |
| c) $\sqrt{\frac{2}{\pi}} \left(\frac{1 - \sin s}{s}\right)$ | d) $\sqrt{\frac{2}{\pi}} \left(\frac{1 - \cos s}{s}\right)$ |

**S.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ENGINEERING MATHEMATICS – III**

Day & Date: Saturday, 07-12-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q. No. 5 & Q. 6 are compulsory.  
 2) Solve any two questions from each section.  
 2) Figures to the right indicate full marks.  
 3) Use of calculator is allowed.

**Section – I**

**Q.2 Solve any three of the following questions. 09**

- a) Solve  $(D^2 + 4)y = \sin^2 x$   
 b) Solve  $(D^2 + 3D + 2)y = x^2 + 3x + 1$   
 c) Solve  $(D^2 + 2D + 5)y = e^{-x} \sin 2x$

**OR**

Solve  $(D^3 + 1)y = 65 \cos(2x + 1)$

**Q.3 Solve the following questions. 09**

- a)  $z(p^2 - q^2) = x - y$   
 b)  $p^3 + q^3 = 27z$   
 c)  $px^2 + qy^2 = (x + y)z$

**Q.4 Solve the following questions. 09**

- a) Find  $L\{e^{-t} \cos^2 3t\}$   
 b) Find  $L\left\{\frac{\cos 6t - \cos 4t}{t}\right\}$   
 c) Find the laplace transform of the periodic function defined by  

$$f(t) = \frac{kt}{T}, 0 < t < T$$
  
 where  $f(t + T) = f(t)$

**Q.5 Solve the following questions.**

- a) Find  $L^{-1}\left\{\frac{2s^2 + 5s - 4}{s^3 + s^2 - 2s}\right\}$  **03**  
 b) Using the convolution theorem, find the inverse Laplace transform of **03**  

$$\frac{1}{(s - 1)(s^2 + 1)}$$
  
 c) Solve  $y'' + 2y' + y = 3t e^{-t}$ , given that  $y = 4, y' = 2$  when  $t = 0$  using Laplace transform. **04**

**Section – II**

- Q.6 a) Find the unit tangent vector at any point on the curve given by 04**  
 $x = t^2 + 2, y = 4t - 5$  and  $z = 2t^2 - 6t$  where  $t$  is any variable. Also determine unit tangent vector at  $t = 2$ .  
 b) Find the value of constant  $a, b$  and  $c$  for which vector **03**  
 $\vec{v} = (x + y + az)i + (bx + 3y - z)j + (3x + cy + z)k$  is irrotational  
 c) Find the angle between the normals to the surface  $x^2y + z = 3$  and **03**  
 $x \log z - y^2 + 4 = 0$  at  $(-1, 2, 1)$

- Q.7 a)** Find the Fourier expansion of  $f(x) = 2x - x^2$  in  $(0,3)$  **05**  
**OR**  
 Find the Fourier series of  $f(x) = x^2 - 2, -2 \leq x \leq 2$  **05**  
**b)** Find the Fourier series of  $f(x) = x^3$  in  $(-\pi, \pi)$  **04**
- Q.8 a)** Express  $f(x) = \begin{cases} \sin x, & |x| < \pi \\ 0, & |x| > \pi \end{cases}$  **03**  
 as a Fourier integral and show that  

$$\int_0^{\infty} \frac{\sin wx \cdot \sin \pi w}{1 - w^2} dw = \begin{cases} \frac{\pi}{2} \cdot \sin x, & |x| < \pi \\ 0, & |x| > \pi \end{cases}$$
- b)** Find Fourier sine transform of  $f(x) = \begin{cases} \sin x, & 0 < x < 1 \\ 0, & x > 1 \end{cases}$  **03**
- c)** Find the Fourier transform of  $f(x) = \begin{cases} \sqrt{2\pi}, & |x| < a \\ 0, & |x| > a \end{cases}$  **03**
- Q.9 Solve any three of the following questions.** **09**
- a)** Find the inverse z-transform of  $\frac{1}{z^2 - 3z + 2}, |z| > 2$
- b)** Find the inverse z-transform of  $\frac{z^2}{(z - \frac{1}{4})(z - \frac{1}{5})}, |z| < \frac{1}{5}$
- c)** Find  $z \left\{ 3^k \sin \left( \frac{k\pi}{2} \right) \right\}, k \geq 0$
- d)** Find  $z \left\{ 4^k + \frac{1}{4^k} \right\}, k \geq 0$

2) Figures to the right indicate full marks.

3) Use of non-programmable calculator is allowed.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The directional derivative of  $\phi = xy + yz + zx$  at  $(1,1,1)$  is maximum in the direction of \_\_\_\_\_.  
 a)  $i + j + k$                                       b)  $i - j + k$   
 c)  $2i + 2j + 2k$                                   d)  $2i - 2j + 2k$
- 2) If  $\vec{r} = xi + yj + zk$  and  $\vec{a}$  is a constant vector then  $\nabla(\vec{a} \cdot \vec{r}) =$  \_\_\_\_\_.  
 a)  $\vec{a}$                                                   b)  $\vec{r}$   
 c)  $\vec{a} \cdot \vec{r}$                                               d) 0
- 3) If  $z\{a^k\} = \frac{z}{z-a}$  then  $z\{k \cdot a^k\} =$  \_\_\_\_\_.  
 a)  $\frac{a}{(z-a)^2}$                                               b)  $\frac{az}{(z-a)^2}$   
 c)  $\frac{z}{(z-a)^2}$                                               d)  $\frac{-1}{(z-a)^2}$
- 4) The inverse z-transform of  $\frac{z}{z-1}, |z| > 1$  is \_\_\_\_\_.  
 a) -1                                                      b) 1  
 c) 0                                                        d) K
- 5) If  $f(x) = x$  is represented by Fourier series in  $(-\pi, \pi)$  then \_\_\_\_\_ is the constant term.  
 a)  $\frac{\pi}{2}$                                                       b)  $\pi$   
 c) 0                                                        d)  $2\pi$
- 6) For Fourier series expansion, function must be \_\_\_\_\_.  
 a) Harmonic                                              b) Reimann  
 c) Cauchy                                                d) Periodic
- 7) The Fourier sine transform of  $f(x) = \begin{cases} 1, & 0 \leq x < 1 \\ 0, & x > 1 \end{cases}$  is \_\_\_\_\_.  
 a)  $\sqrt{\frac{2}{\pi}}$                                                       b)  $\sqrt{\frac{2}{\pi}} (1 - \cos s)$   
 c)  $\sqrt{\frac{2}{\pi}} \left(\frac{1 - \sin s}{s}\right)$                                       d)  $\sqrt{\frac{2}{\pi}} \left(\frac{1 - \cos s}{s}\right)$

- 8) The particular Integral of  $(D + 1)^3 y = e^{-x}$  is \_\_\_\_\_.
- a)  $\frac{x^3}{3!} e^{-x}$                                       b)  $\frac{x^2}{2} e^{-x}$   
 c)  $x e^x$                                               d) None of these
- 9) The complete solution of  $(D^4 + 6D^2 + 9)y = 0$  is \_\_\_\_\_.
- a)  $y = (c_1 + c_2 x) e^x + (c_3 + c_4 x) e^{-x}$   
 b)  $y = (c_1 + c_2) e^x + (c_3 + c_4 x) e^{-x}$   
 c)  $y = (c_1 + c_2 x) \cos \sqrt{3}x + (c_3 + c_4 x) \sin \sqrt{3}x$   
 d)  $y = (c_1 + c_2 x) \cos 3x + (c_3 + c_4 x) \sin 3x$
- 10) The solution of  $px + qy = z$  is \_\_\_\_\_.
- a)  $\phi(x + y, y + z) = 0$                                       b)  $\phi\left(\frac{x}{y}, \frac{y}{z}\right) = 0$   
 c)  $\phi\left(\frac{x^2}{y}, \frac{y^2}{z}\right) = 0$                                               d)  $\phi(xy, yz) = 0$
- 11) The value of the integral  $\int_0^{\infty} e^{-3t} \sin t dt$  is \_\_\_\_\_.
- a) 5                                                              b)  $\frac{1}{5}$   
 c) 10                                                              d)  $\frac{1}{10}$
- 12) The Laplace transform of  $(\sin t + \cos t)^2$  is \_\_\_\_\_.
- a)  $\frac{1}{s} - \frac{2}{s^2 + 4}$                                               b)  $\frac{1}{s} + \frac{2}{s^2 + 4}$   
 c)  $\frac{1}{s} - \frac{2}{s^2 - 4}$                                               d)  $\frac{1}{s} + \frac{2}{s^2 - 4}$
- 13)  $\frac{1}{(s+3)^2}$  is the Laplace transform of \_\_\_\_\_.
- a)  $t e^{-3t}$                                                               b)  $t^2 e^{-3t}$   
 c)  $e^{-3t}$                                                                       d)  $t e^{3t}$
- 14)  $L^{-1}\left\{\frac{1}{s^2 - 6s + 25}\right\} =$  \_\_\_\_\_.
- a)  $\frac{e^{-3t}}{4} \sin 4t$                                                               b)  $\frac{e^{-3t} \cos 4t}{4}$   
 c)  $e^{-3t} \sin 4t$                                                               d)  $\frac{e^{3t} \sin 4t}{4}$

 2) Solve any two questions from each section.  
 2) Figures to the right indicate full marks.  
 3) Use of calculator is allowed.

**Section – I**

**Q.2 Solve any three of the following questions. 09**

- a) Solve  $(D^2 + 4)y = \sin^2 x$   
 b) Solve  $(D^2 + 3D + 2)y = x^2 + 3x + 1$   
 c) Solve  $(D^2 + 2D + 5)y = e^{-x} \sin 2x$

**OR**

$$\text{Solve } (D^3 + 1)y = 65 \cos(2x + 1)$$

**Q.3 Solve the following questions. 09**

- a)  $z(p^2 - q^2) = x - y$   
 b)  $p^3 + q^3 = 27z$   
 c)  $px^2 + qy^2 = (x + y)z$

**Q.4 Solve the following questions. 09**

- a) Find  $L\{e^{-t} \cos^2 3t\}$   
 b) Find  $L\left\{\frac{\cos 6t - \cos 4t}{t}\right\}$   
 c) Find the laplace transform of the periodic function defined by  

$$f(t) = \frac{kt}{T}, 0 < t < T$$
  
 where  $f(t + T) = f(t)$

**Q.5 Solve the following questions.**

- a) Find  $L^{-1}\left\{\frac{2s^2 + 5s - 4}{s^3 + s^2 - 2s}\right\}$  **03**  
 b) Using the convolution theorem, find the inverse Laplace transform of **03**  

$$\frac{1}{(s-1)(s^2+1)}$$
  
 c) Solve  $y'' + 2y' + y = 3t e^{-t}$ , given that  $y = 4, y' = 2$  when  $t = 0$  using Laplace transform. **04**

**Section – II**

- Q.6 a) Find the unit tangent vector at any point on the curve given by 04**  
 $x = t^2 + 2, y = 4t - 5$  and  $z = 2t^2 - 6t$  where  $t$  is any variable. Also determine unit tangent vector at  $t = 2$ .  
 b) Find the value of constant  $a, b$  and  $c$  for which vector **03**  
 $\vec{v} = (x + y + az)i + (bx + 3y - z)j + (3x + cy + z)k$  is irrotational  
 c) Find the angle between the normals to the surface  $x^2y + z = 3$  and **03**  
 $x \log z - y^2 + 4 = 0$  at  $(-1, 2, 1)$

- Q.7 a)** Find the Fourier expansion of  $f(x) = 2x - x^2$  in  $(0,3)$  **05**  
**OR**  
 Find the Fourier series of  $f(x) = x^2 - 2, -2 \leq x \leq 2$  **05**  
**b)** Find the Fourier series of  $f(x) = x^3$  in  $(-\pi, \pi)$  **04**
- Q.8 a)** Express  $f(x) = \begin{cases} \sin x, & |x| < \pi \\ 0, & |x| > \pi \end{cases}$  **03**  
 as a Fourier integral and show that  

$$\int_0^{\infty} \frac{\sin wx \cdot \sin \pi w}{1 - w^2} dw = \begin{cases} \frac{\pi}{2} \cdot \sin x, & |x| < \pi \\ 0, & |x| > \pi \end{cases}$$
- b)** Find Fourier sine transform of  $f(x) = \begin{cases} \sin x, & 0 < x < 1 \\ 0, & x > 1 \end{cases}$  **03**
- c)** Find the Fourier transform of  $f(x) = \begin{cases} \sqrt{2\pi}, & |x| < a \\ 0, & |x| > a \end{cases}$  **03**
- Q.9 Solve any three of the following questions.** **09**
- a)** Find the inverse z-transform of  $\frac{1}{z^2 - 3z + 2}, |z| > 2$
- b)** Find the inverse z-transform of  $\frac{z^2}{(z - \frac{1}{4})(z - \frac{1}{5})}, |z| < \frac{1}{5}$
- c)** Find  $z \left\{ 3^k \sin \left( \frac{k\pi}{2} \right) \right\}, k \geq 0$
- d)** Find  $z \left\{ 4^k + \frac{1}{4^k} \right\}, k \geq 0$

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The Laplace transform of  $(\sin t + \cos t)^2$  is \_\_\_\_\_.  
 a)  $\frac{1}{s} - \frac{2}{s^2+4}$                       b)  $\frac{1}{s} + \frac{2}{s^2+4}$   
 c)  $\frac{1}{s} - \frac{2}{s^2-4}$                       d)  $\frac{1}{s} + \frac{2}{s^2-4}$
  
- 2)  $\frac{1}{(s+3)^2}$  is the Laplace transform of \_\_\_\_\_.  
 a)  $t e^{-3t}$                                   b)  $t^2 e^{-3t}$   
 c)  $e^{-3t}$                                       d)  $t e^{3t}$
  
- 3)  $L^{-1} \left\{ \frac{1}{s^2-6s+25} \right\} =$  \_\_\_\_\_.  
 a)  $\frac{e^{-3t}}{4} \sin 4t$                               b)  $\frac{e^{-3t} \cos 4t}{4}$   
 c)  $e^{-3t} \sin 4t$                               d)  $\frac{e^{3t} \sin 4t}{4}$
  
- 4) The directional derivative of  $\phi = xy + yz + zx$  at  $(1,1,1)$  is maximum in the direction of \_\_\_\_\_.  
 a)  $i + j + k$                                   b)  $i - j + k$   
 c)  $2i + 2j + 2k$                               d)  $2i - 2j + 2k$
  
- 5) If  $\vec{r} = xi + yj + zk$  and  $\vec{a}$  is a constant vector then  $\nabla(\vec{a} \cdot \vec{r}) =$  \_\_\_\_\_.  
 a)  $\vec{a}$                                               b)  $\vec{r}$   
 c)  $\vec{a} \cdot \vec{r}$                                         d) 0
  
- 6) If  $z\{a^k\} = \frac{z}{z-a}$  then  $z\{k \cdot a^k\} =$  \_\_\_\_\_.  
 a)  $\frac{a}{(z-a)^2}$                                       b)  $\frac{az}{(z-a)^2}$   
 c)  $\frac{z}{(z-a)^2}$                                       d)  $\frac{-1}{(z-a)^2}$
  
- 7) The inverse z-transform of  $\frac{z}{z-1}, |z| > 1$  is \_\_\_\_\_.  
 a) -1                                              b) 1  
 c) 0                                                d) K

- 8) If  $f(x) = x$  is represented by Fourier series in  $(-\pi, \pi)$  then \_\_\_\_\_ is the constant term.
- a)  $\frac{\pi}{2}$                                       b)  $\pi$   
c) 0                                              d)  $2\pi$
- 9) For Fourier series expansion, function must be \_\_\_\_\_.  
a) Harmonic                                  b) Reimann  
c) Cauchy                                      d) Periodic
- 10) The Fourier sine transform of  $f(x) = \begin{cases} 1, & 0 \leq x < 1 \\ 0, & x > 1 \end{cases}$  is \_\_\_\_\_.  
a)  $\sqrt{\frac{2}{\pi}}$                                       b)  $\sqrt{\frac{2}{\pi}} (1 - \cos s)$   
c)  $\sqrt{\frac{2}{\pi}} \left(\frac{1 - \sin s}{s}\right)$                       d)  $\sqrt{\frac{2}{\pi}} \left(\frac{1 - \cos s}{s}\right)$
- 11) The particular Integral of  $(D + 1)^3 y = e^{-x}$  is \_\_\_\_\_.  
a)  $\frac{x^3}{3!} e^{-x}$                                   b)  $\frac{x^2}{2} e^{-x}$   
c)  $x e^x$                                           d) None of these
- 12) The complete solution of  $(D^4 + 6D^2 + 9)y = 0$  is \_\_\_\_\_.  
a)  $y = (c_1 + c_2x)e^x + (c_3 + c_4x)e^{-x}$   
b)  $y = (c_1 + c_2)e^x + (c_3 + c_4x)e^{-x}$   
c)  $y = (c_1 + c_2x) \cos \sqrt{3}x + (c_3 + c_4x) \sin \sqrt{3}x$   
d)  $y = (c_1 + c_2x) \cos 3x + (c_3 + c_4x) \sin 3x$
- 13) The solution of  $px + qy = z$  is \_\_\_\_\_.  
a)  $\phi(x + y, y + z) = 0$                       b)  $\phi\left(\frac{x}{y}, \frac{y}{z}\right) = 0$   
c)  $\phi\left(\frac{x^2}{y}, \frac{y^2}{z}\right) = 0$                               d)  $\phi(xy, yz) = 0$
- 14) The value of the integral  $\int_0^{\infty} e^{-3t} \sin t dt$  is \_\_\_\_\_.  
a) 5                                                  b)  $\frac{1}{5}$   
c) 10                                                  d)  $\frac{1}{10}$

Seat  
No.

**S.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ENGINEERING MATHEMATICS – III**

Day & Date: Saturday, 07-12-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) Q. No. 5 & Q. 6 are compulsory.  
 2) Solve any two questions from each section.  
 2) Figures to the right indicate full marks.  
 3) Use of calculator is allowed.

**Section – I****Q.2 Solve any three of the following questions. 09**

- a) Solve  $(D^2 + 4)y = \sin^2 x$   
 b) Solve  $(D^2 + 3D + 2)y = x^2 + 3x + 1$   
 c) Solve  $(D^2 + 2D + 5)y = e^{-x} \sin 2x$

**OR**

$$\text{Solve } (D^3 + 1)y = 65 \cos(2x + 1)$$

**Q.3 Solve the following questions. 09**

- a)  $z(p^2 - q^2) = x - y$   
 b)  $p^3 + q^3 = 27z$   
 c)  $px^2 + qy^2 = (x + y)z$

**Q.4 Solve the following questions. 09**

- a) Find  $L\{e^{-t} \cos^2 3t\}$   
 b) Find  $L\left\{\frac{\cos 6t - \cos 4t}{t}\right\}$   
 c) Find the laplace transform of the periodic function defined by  

$$f(t) = \frac{kt}{T}, 0 < t < T$$
  
 where  $f(t + T) = f(t)$

**Q.5 Solve the following questions.**

- a) Find  $L^{-1}\left\{\frac{2s^2 + 5s - 4}{s^3 + s^2 - 2s}\right\}$  **03**  
 b) Using the convolution theorem, find the inverse Laplace transform of **03**  

$$\frac{1}{(s-1)(s^2+1)}$$
  
 c) Solve  $y'' + 2y' + y = 3t e^{-t}$ , given that  $y = 4, y' = 2$  when  $t = 0$  using Laplace transform. **04**

**Section – II**

- Q.6 a)** Find the unit tangent vector at any point on the curve given by **04**  
 $x = t^2 + 2, y = 4t - 5$  and  $z = 2t^2 - 6t$  where  $t$  is any variable. Also determine unit tangent vector at  $t = 2$ .  
**b)** Find the value of constant  $a, b$  and  $c$  for which vector **03**  
 $\vec{v} = (x + y + az)i + (bx + 3y - z)j + (3x + cy + z)k$  is irrotational  
**c)** Find the angle between the normals to the surface  $x^2y + z = 3$  and **03**  
 $x \log z - y^2 + 4 = 0$  at  $(-1, 2, 1)$

- Q.7 a)** Find the Fourier expansion of  $f(x) = 2x - x^2$  in  $(0,3)$  **05**  
**OR**  
 Find the Fourier series of  $f(x) = x^2 - 2, -2 \leq x \leq 2$  **05**  
**b)** Find the Fourier series of  $f(x) = x^3$  in  $(-\pi, \pi)$  **04**
- Q.8 a)** Express  $f(x) = \begin{cases} \sin x, & |x| < \pi \\ 0, & |x| > \pi \end{cases}$  **03**  
 as a Fourier integral and show that  

$$\int_0^{\infty} \frac{\sin wx \cdot \sin \pi w}{1 - w^2} dw = \begin{cases} \frac{\pi}{2} \cdot \sin x, & |x| < \pi \\ 0, & |x| > \pi \end{cases}$$
- b)** Find Fourier sine transform of  $f(x) = \begin{cases} \sin x, & 0 < x < 1 \\ 0, & x > 1 \end{cases}$  **03**
- c)** Find the Fourier transform of  $f(x) = \begin{cases} \sqrt{2\pi}, & |x| < a \\ 0, & |x| > a \end{cases}$  **03**
- Q.9 Solve any three of the following questions.** **09**
- a)** Find the inverse z-transform of  $\frac{1}{z^2 - 3z + 2}, |z| > 2$
- b)** Find the inverse z-transform of  $\frac{z^2}{(z - \frac{1}{4})(z - \frac{1}{5})}, |z| < \frac{1}{5}$
- c)** Find  $z \left\{ 3^k \sin \left( \frac{k\pi}{2} \right) \right\}, k \geq 0$
- d)** Find  $z \left\{ 4^k + \frac{1}{4^k} \right\}, k \geq 0$

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) If  $z\{a^k\} = \frac{z}{z-a}$  then  $z\{k \cdot a^k\} = \underline{\hspace{2cm}}$ .
  - a)  $\frac{a}{(z-a)^2}$
  - b)  $\frac{az}{(z-a)^2}$
  - c)  $\frac{z}{(z-a)^2}$
  - d)  $\frac{-1}{(z-a)^2}$
- 2) The inverse z-transform of  $\frac{z}{z-1}, |z| > 1$  is  $\underline{\hspace{2cm}}$ .
  - a) -1
  - b) 1
  - c) 0
  - d) K
- 3) If  $f(x) = x$  is represented by Fourier series in  $(-\pi, \pi)$  then  $\underline{\hspace{2cm}}$  is the constant term.
  - a)  $\frac{\pi}{2}$
  - b)  $\pi$
  - c) 0
  - d)  $2\pi$
- 4) For Fourier series expansion, function must be  $\underline{\hspace{2cm}}$ .
  - a) Harmonic
  - b) Reimann
  - c) Cauchy
  - d) Periodic
- 5) The Fourier sine transform of  $f(x) = \begin{cases} 1, & 0 \leq x < 1 \\ 0, & x > 1 \end{cases}$  is  $\underline{\hspace{2cm}}$ .
  - a)  $\sqrt{\frac{2}{\pi}}$
  - b)  $\sqrt{\frac{2}{\pi}} (1 - \cos s)$
  - c)  $\sqrt{\frac{2}{\pi}} \left(\frac{1 - \sin s}{s}\right)$
  - d)  $\sqrt{\frac{2}{\pi}} \left(\frac{1 - \cos s}{s}\right)$
- 6) The particular Integral of  $(D + 1)^3 y = e^{-x}$  is  $\underline{\hspace{2cm}}$ .
  - a)  $\frac{x^3}{3!} e^{-x}$
  - b)  $\frac{x^2}{2} e^{-x}$
  - c)  $x e^{-x}$
  - d) None of these
- 7) The complete solution of  $(D^4 + 6D^2 + 9)y = 0$  is  $\underline{\hspace{2cm}}$ .
  - a)  $y = (c_1 + c_2 x)e^x + (c_3 + c_4 x)e^{-x}$
  - b)  $y = (c_1 + c_2)e^x + (c_3 + c_4 x)e^{-x}$
  - c)  $y = (c_1 + c_2 x) \cos \sqrt{3}x + (c_3 + c_4 x) \sin \sqrt{3}x$
  - d)  $y = (c_1 + c_2 x) \cos 3x + (c_3 + c_4 x) \sin 3x$

- 8) The solution of  $px + qy = z$  is \_\_\_\_\_.
- a)  $\phi(x + y, y + z) = 0$       b)  $\phi\left(\frac{x}{y}, \frac{y}{z}\right) = 0$   
 c)  $\phi\left(\frac{x^2}{y}, \frac{y^2}{z}\right) = 0$       d)  $\phi(xy, yz) = 0$
- 9) The value of the integral  $\int_0^{\infty} e^{-3t} \sin t dt$  is \_\_\_\_\_.
- a) 5      b)  $\frac{1}{5}$   
 c) 10      d)  $\frac{1}{10}$
- 10) The Laplace transform of  $(\sin t + \cos t)^2$  is \_\_\_\_\_.
- a)  $\frac{1}{s} - \frac{2}{s^2+4}$       b)  $\frac{1}{s} + \frac{2}{s^2+4}$   
 c)  $\frac{1}{s} - \frac{2}{s^2-4}$       d)  $\frac{1}{s} + \frac{2}{s^2-4}$
- 11)  $\frac{1}{(s+3)^2}$  is the Laplace transform of \_\_\_\_\_.
- a)  $t e^{-3t}$       b)  $t^2 e^{-3t}$   
 c)  $e^{-3t}$       d)  $t e^{3t}$
- 12)  $L^{-1}\left\{\frac{1}{s^2-6s+25}\right\} =$  \_\_\_\_\_.
- a)  $\frac{e^{-3t}}{4} \sin 4t$       b)  $\frac{e^{-3t} \cos 4t}{4}$   
 c)  $e^{-3t} \sin 4t$       d)  $\frac{e^{3t} \sin 4t}{4}$
- 13) The directional derivative of  $\phi = xy + yz + zx$  at  $(1,1,1)$  is maximum in the direction of \_\_\_\_\_.
- a)  $i + j + k$       b)  $i - j + k$   
 c)  $2i + 2j + 2k$       d)  $2i - 2j + 2k$
- 14) If  $\vec{r} = xi + yj + zk$  and  $\vec{a}$  is a constant vector then  $\nabla(\vec{a} \cdot \vec{r}) =$  \_\_\_\_\_.
- a)  $\vec{a}$       b)  $\vec{r}$   
 c)  $\vec{a} \cdot \vec{r}$       d) 0

- Instructions:** 1) Q. No. 5 & Q. 6 are compulsory.  
2) Solve any two questions from each section.  
2) Figures to the right indicate full marks.  
3) Use of calculator is allowed.

**Section – I**

**Q.2 Solve any three of the following questions. 09**

- a) Solve  $(D^2 + 4)y = \sin^2 x$   
b) Solve  $(D^2 + 3D + 2)y = x^2 + 3x + 1$   
c) Solve  $(D^2 + 2D + 5)y = e^{-x} \sin 2x$

**OR**

$$\text{Solve } (D^3 + 1)y = 65 \cos(2x + 1)$$

**Q.3 Solve the following questions. 09**

- a)  $z(p^2 - q^2) = x - y$   
b)  $p^3 + q^3 = 27z$   
c)  $px^2 + qy^2 = (x + y)z$

**Q.4 Solve the following questions. 09**

- a) Find  $L\{e^{-t} \cos^2 3t\}$   
b) Find  $L\left\{\frac{\cos 6t - \cos 4t}{t}\right\}$   
c) Find the laplace transform of the periodic function defined by  
$$f(t) = \frac{kt}{T}, 0 < t < T$$
  
where  $f(t + T) = f(t)$

**Q.5 Solve the following questions.**

- a) Find  $L^{-1}\left\{\frac{2s^2 + 5s - 4}{s^3 + s^2 - 2s}\right\}$  **03**  
b) Using the convolution theorem, find the inverse Laplace transform of  $\frac{1}{(s-1)(s^2+1)}$  **03**  
c) Solve  $y'' + 2y' + y = 3t e^{-t}$ , given that  $y = 4, y' = 2$  when  $t = 0$  using Laplace transform. **04**

**Section – II**

- Q.6 a)** Find the unit tangent vector at any point on the curve given by  $x = t^2 + 2, y = 4t - 5$  and  $z = 2t^2 - 6t$  where  $t$  is any variable. Also determine unit tangent vector at  $t = 2$ . **04**  
**b)** Find the value of constant  $a, b$  and  $c$  for which vector  $\bar{v} = (x + y + az)i + (bx + 3y - z)j + (3x + cy + z)k$  is irrotational **03**  
**c)** Find the angle between the normals to the surface  $x^2y + z = 3$  and  $x \log z - y^2 + 4 = 0$  at  $(-1, 2, 1)$  **03**

- Q.7 a)** Find the Fourier expansion of  $f(x) = 2x - x^2$  in  $(0,3)$  **05**  
**OR**  
 Find the Fourier series of  $f(x) = x^2 - 2, -2 \leq x \leq 2$  **05**  
**b)** Find the Fourier series of  $f(x) = x^3$  in  $(-\pi, \pi)$  **04**
- Q.8 a)** Express  $f(x) = \begin{cases} \sin x, & |x| < \pi \\ 0, & |x| > \pi \end{cases}$  **03**  
 as a Fourier integral and show that  

$$\int_0^{\infty} \frac{\sin wx \cdot \sin \pi w}{1 - w^2} dw = \begin{cases} \frac{\pi}{2} \cdot \sin x, & |x| < \pi \\ 0, & |x| > \pi \end{cases}$$
- b)** Find Fourier sine transform of  $f(x) = \begin{cases} \sin x, & 0 < x < 1 \\ 0, & x > 1 \end{cases}$  **03**
- c)** Find the Fourier transform of  $f(x) = \begin{cases} \sqrt{2\pi}, & |x| < a \\ 0, & |x| > a \end{cases}$  **03**
- Q.9 Solve any three of the following questions.** **09**
- a)** Find the inverse z-transform of  $\frac{1}{z^2 - 3z + 2}, |z| > 2$
- b)** Find the inverse z-transform of  $\frac{z^2}{(z - \frac{1}{4})(z - \frac{1}{5})}, |z| < \frac{1}{5}$
- c)** Find  $z \left\{ 3^k \sin \left( \frac{k\pi}{2} \right) \right\}, k \geq 0$
- d)** Find  $z \left\{ 4^k + \frac{1}{4^k} \right\}, k \geq 0$

**S.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ELECTRONICS CIRCUIT ANALYSIS AND DESIGN – I**

Day & Date: Tuesday, 10-12-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Assume suitable data if necessary.  
 3) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) An input voltage of 20Vrms is given to voltage doubler circuit. What is the output voltage?
  - a) 56.56V
  - b) 40V
  - c) 28.28V
  - d) None of these
- 2) Ideal value of Load regulation is \_\_\_\_\_ and ideal value of ripple factor is \_\_\_\_\_.
  - a) Zero, Zero
  - b) Infinite, Infinite
  - c) Infinite, Zero
  - d) Zero, Infinite
- 3) PIV of diode used in voltage multiplier circuit is \_\_\_\_\_.
  - a)  $2V_m$
  - b)  $V_m/2$
  - c)  $V_m$
  - d)  $2V_m/\pi$
- 4) Back emf in LC filter can be avoided by using \_\_\_\_\_.
  - a) Inductor filter
  - b) Using capacitor filter
  - c) Using bleeder resistor
  - d) Using bleeder capacitor
- 5) If one of the diode in center tapped full wave rectifier circuit get damaged it act like \_\_\_\_\_.
  - a) Clipper circuit
  - b) Half wave rectifier
  - c) Both a & b
  - d) Cant say
- 6) Reverse saturation current gets \_\_\_\_\_ for every \_\_\_\_\_ rise in temperature.
  - a) Half,  $10^\circ\text{C}$
  - b) Triple,  $30^\circ\text{C}$
  - c) Double,  $10^\circ\text{C}$
  - d) Constant,  $20^\circ\text{C}$
- 7) The critical value of inductance in choke input filter is \_\_\_\_\_.
  - a)  $3\omega/R_L$
  - b)  $R_L/3\omega$
  - c)  $3\omega R_L$
  - d)  $R_L$
- 8) Which are the majority charge carriers in N-channel JFET by enhancing the flow of current between two P-regions or gates?
  - a) Holes
  - b) Electrons
  - c) Both a & b
  - d) None of the above
- 9) Which region is lightly doped with an impurity by forming PN junctions in JFET?
  - a) Source
  - b) Drain
  - c) Gate
  - d) Channel

- 10)  $I_{cbo}$  in transistor can be reduced by reducing \_\_\_\_\_.
- a)  $I_B$
  - b)  $I_E$
  - c)  $V_{cc}$
  - d) Temperature
- 11) In a transistor,  $I_c = 100$  mA and  $I_E = 100.2$  mA. The value of  $\beta$  is \_\_\_\_\_.
- a) 100
  - b) 200
  - c) about 1
  - d) 50
- 12) The voltage gain of a transistor connected in common collector arrangement are \_\_\_\_\_.
- a) equal to 1
  - b) more than 10
  - c) less than 1
  - d) more than 100
- 13) The Early Effect is also called as \_\_\_\_\_.
- a) Base-width modulation effect
  - b) Base-width amplification effect
  - c) Punch through effect
  - d) None of the mentioned
- 14) BC 147 transistor indicates that it is made of \_\_\_\_\_.
- a) germanium
  - b) silicon
  - c) carbon
  - d) none of the above

Seat  
No.

**S.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ELECTRONICS CIRCUIT ANALYSIS AND DESIGN – I**

Day & Date: Tuesday, 10-12-2019  
 Time: 10:00 AM To 01:00 PM

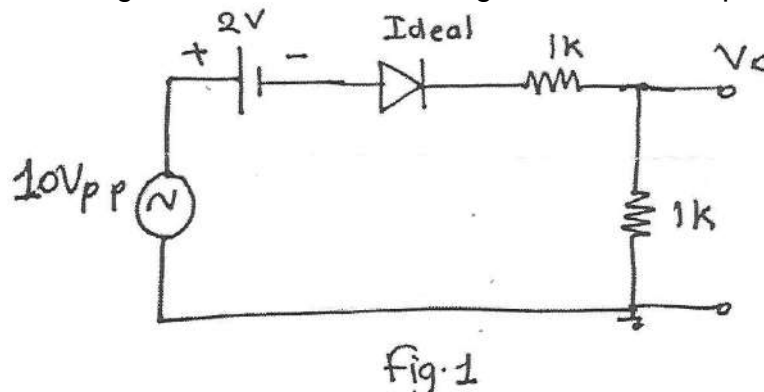

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Assume the suitable data whenever necessary.  
 3) Figures to the right indicate full marks.

**Section – I****Q.2 Solve any Four.**

16

- What is the difference between normal PN junction diode and zener diode? Explain with the help of V-I characteristics.
- Explain with neat circuit diagram working of voltage tripler. Does this circuit provides power multiplication also?
- Explain the working of the circuit shown in fig. 1 and draw output waveform.

- Derive expression for efficiency and ripple factor for center tapped full wave rectifier.
- Calculate value of reverse saturation current for Silicon diode at room temperature when applied voltage is 5V and forward current through diode is 1A.

**Q.3 Solve any Two.**

12

- Design unregulated power supply with two diode and CLC filter to provide 21V and 10mA current, ripple content in the output must be less than 1%.
- What is clamper? Explain working of positive clamper with neat circuit diagram and waveform. What are the applications of Clamper circuit?
- Explain junction capacitances of diode and derive expression for diffusion capacitance.

**Section – II****Q.4 Attempt any Four.**

16

- Calculate Q point coordinates for collector to base biasing circuit for Si transistor with  
 $R_C = 1\text{ K}\Omega$ ,  $R_B = 100\text{ K}\Omega$ ,  $V_{CC} = 12\text{V}$ ,  $\beta_{dc} = 100$ .
- Justify output voltage signal is  $180^\circ$  out of phase with input signal with suitable diagram for transistor Common Emitter amplifier.
- Explain stabilization of Q point for voltage divider biasing circuit.
- Explain effect of Gate to source voltage on channel conductivity for JFET.
- Explain high frequency response of BJT amplifier.

**Q.5 Attempt any Two.**

- a)** Design a single stage CE amplifier with voltage divider bias to give voltage gain of 40,  $V_o$  peak = 4V and stability factor  $S=10$ . Assume  $h_{fe}=45$ ,  $h_{ie} = 1.4K\Omega$ .
- b)** Consider transistor CE amplifier with  $R_L = 2.7K\Omega$ ,  $h_{ie}=4.5K\Omega$ ,  $h_{re}=2 \times 10^{-4}$ ,  $h_{fe}=330$ ,  $h_{oe}=30\mu\Omega$ . Calculate  $A_i$ ,  $A_v$ ,  $R_i$ ,  $R_o$ .
- c)** Explain Common Source JFET amplifier with its basic parameters.

Set **Q**

**S.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ELECTRONICS CIRCUIT ANALYSIS AND DESIGN – I**

Day & Date: Tuesday, 10-12-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Assume suitable data if necessary.  
 3) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Which are the majority charge carriers in N-channel JFET by enhancing the flow of current between two P-regions or gates?
  - a) Holes
  - b) Electrons
  - c) Both a & b
  - d) None of the above
- 2) Which region is lightly doped with an impurity by forming PN junctions in JFET?
  - a) Source
  - b) Drain
  - c) Gate
  - d) Channel
- 3)  $I_{cbo}$  in transistor can be reduced by reducing \_\_\_\_\_.
  - a)  $I_B$
  - b)  $I_E$
  - c)  $V_{cc}$
  - d) Temperature
- 4) In a transistor,  $I_c = 100$  mA and  $I_E = 100.2$  mA. The value of  $\beta$  is \_\_\_\_\_.
  - a) 100
  - b) 200
  - c) about 1
  - d) 50
- 5) The voltage gain of a transistor connected in common collector arrangement are \_\_\_\_\_.
  - a) equal to 1
  - b) more than 10
  - c) less than 1
  - d) more than 100
- 6) The Early Effect is also called as \_\_\_\_\_.
  - a) Base-width modulation effect
  - b) Base-width amplification effect
  - c) Punch through effect
  - d) None of the mentioned
- 7) BC 147 transistor indicates that it is made of \_\_\_\_\_.
  - a) germanium
  - b) silicon
  - c) carbon
  - d) none of the above
- 8) An input voltage of 20Vrms is given to voltage doubler circuit. What is the output voltage?
  - a) 56.56V
  - b) 40V
  - c) 28.28V
  - d) None of these
- 9) Ideal value of Load regulation is \_\_\_\_\_ and ideal value of ripple factor is \_\_\_\_\_.
  - a) Zero, Zero
  - b) Infinite, Infinite
  - c) Infinite, Zero
  - d) Zero, Infinite

Seat  
No.

**Electronics & Telecommunication Engineering**  
**ELECTRONICS CIRCUIT ANALYSIS AND DESIGN – I**

Day & Date: Tuesday, 10-12-2019  
 Time: 10:00 AM To 01:00 PM

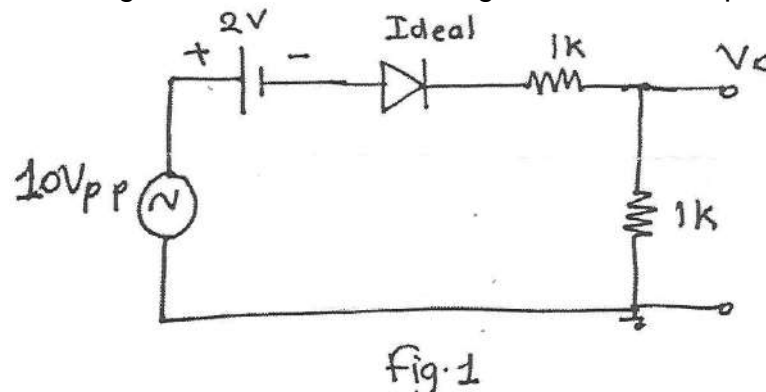

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Assume the suitable data whenever necessary.  
 3) Figures to the right indicate full marks.

**Section – I****Q.2 Solve any Four.**

16

- What is the difference between normal PN junction diode and zener diode? Explain with the help of V-I characteristics.
- Explain with neat circuit diagram working of voltage tripler. Does this circuit provides power multiplication also?
- Explain the working of the circuit shown in fig. 1 and draw output waveform.

- Derive expression for efficiency and ripple factor for center tapped full wave rectifier.
- Calculate value of reverse saturation current for Silicon diode at room temperature when applied voltage is 5V and forward current through diode is 1A.

**Q.3 Solve any Two.**

12

- Design unregulated power supply with two diode and CLC filter to provide 21V and 10mA current, ripple content in the output must be less than 1%.
- What is clamper? Explain working of positive clamper with neat circuit diagram and waveform. What are the applications of Clamper circuit?
- Explain junction capacitances of diode and derive expression for diffusion capacitance.

**Section – II****Q.4 Attempt any Four.**

16

- Calculate Q point coordinates for collector to base biasing circuit for Si transistor with  
 $R_C = 1\text{ K}\Omega$ ,  $R_B = 100\text{ K}\Omega$ ,  $V_{CC} = 12\text{V}$ ,  $\beta_{dc} = 100$ .
- Justify output voltage signal is  $180^\circ$  out of phase with input signal with suitable diagram for transistor Common Emitter amplifier.
- Explain stabilization of Q point for voltage divider biasing circuit.
- Explain effect of Gate to source voltage on channel conductivity for JFET.
- Explain high frequency response of BJT amplifier.

**Q.5 Attempt any Two.**

- a)** Design a single stage CE amplifier with voltage divider bias to give voltage gain of 40,  $V_o$  peak = 4V and stability factor  $S=10$ . Assume  $h_{fe}=45$ ,  $h_{ie} = 1.4K\Omega$ .
- b)** Consider transistor CE amplifier with  $R_L = 2.7K\Omega$ ,  $h_{ie}=4.5K\Omega$ ,  $h_{re}=2 \times 10^{-4}$ ,  $h_{fe}=330$ ,  $h_{oe}=30\mu\Omega$ . Calculate  $A_i$ ,  $A_v$ ,  $R_i$ ,  $R_o$ .
- c)** Explain Common Source JFET amplifier with its basic parameters.

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) If one of the diode in center tapped full wave rectifier circuit get damaged it act like \_\_\_\_\_.  
a) Clipper circuit  
b) Half wave rectifier  
c) Both a & b  
d) Cant say
- 2) Reverse saturation current gets \_\_\_\_\_ for every \_\_\_\_\_ rise in temperature.  
a) Half, 10°C  
b) Triple, 30°C  
c) Double, 10°C  
d) Constant, 20°C
- 3) The critical value of inductance in choke input filter is \_\_\_\_\_.  
a)  $3\omega/R_L$   
b)  $R_L/3\omega$   
c)  $3\omega R_L$   
d)  $R_L$
- 4) Which are the majority charge carriers in N-channel JFET by enhancing the flow of current between two P-regions or gates?  
a) Holes  
b) Electrons  
c) Both a & b  
d) None of the above

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The superposition theorem is applicable on \_\_\_\_\_.  
 a) Both Linear and non linear circuits  
 b) Linear circuits only  
 c) Non Linear circuits only  
 d) None of the above
- 2) For maximum transfer of power the source resistance must be \_\_\_\_\_.  
 a) Equal to load resistance      b) less than load resistance  
 c) Greater than load resistance      d) None of the above
- 3) If the value of resonant frequency is 50 kHz in a series RLC circuit along with the bandwidth of about 1 kHz, then what would be the value of quality factor?  
 a) 5      b) 50  
 c) 100      d) 500
- 4) What would be the value of impedance of a parallel resonant circuit at anti resonance condition?  
 a) Resistive & maximum      b) Resistive & minimum  
 c) Reactive & maximum      d) Reactive & minimum
- 5) How is the short circuit reverse transfer admittance ( $Y_{12}$ ) calculated?  
 a)  $V_2/I_1$  (keeping  $I_2=0$ )      b)  $I_2/V_1$  (keeping  $V_2=0$ )  
 c)  $I_1/V_2$  (keeping  $V_1=0$ )      d)  $V_1/I_2$  (keeping  $I_1=0$ )
- 6) In a certain series resonant circuit,  $V_C = 125V$ ,  $V_L = 125V$ , and  $V_R = 40V$ . The value of the source voltage is \_\_\_\_\_.  
 a) 50V      b) 125V  
 c) 40V      d) 250V
- 7) Which elements act as independent variables in Z-parameters?  
 a) Current      b) Voltage  
 c) Both a and b      d) None of the above
- 8) In RC series circuit  $R = 2\Omega$ ,  $C = 2\mu F$  and 10V dc is applied. Then what is the value of current at steady state?  
 a) 0A      b) 5 A  
 c) 20A      d) 10A

- 9) Time constant of RL series circuit is \_\_\_\_\_.
- |           |          |
|-----------|----------|
| a) $2L/R$ | b) $L/R$ |
| c) $RL$   | d) $R/L$ |
- 10) Transients are presents in the circuit when the circuit is having \_\_\_\_\_.
- |        |                      |
|--------|----------------------|
| a) $R$ | b) $L$               |
| c) $C$ | d) Either $L$ or $C$ |
- 11) An ideal filter is one which \_\_\_\_\_.
- a) Zero attenuation in pass band
  - b) Infinite attenuation in pass band
  - c) No attenuation in stop band
  - d) None of the above
- 12) A band elimination filter is one which \_\_\_\_\_.
- a) Attenuates ail frequencies less than lower cut off frequency
  - b) Attenuates all frequencies greater than lower cut off frequency
  - c) Attenuates all frequencies between lower and higher cut off frequency
  - d) None of the above
- 13) Relation between neper and decibel is \_\_\_\_\_.
- |                                             |                                             |
|---------------------------------------------|---------------------------------------------|
| a) $N=\log(\text{attn in dB}/20)$           | b) $N=\log(20/\text{attn in dB})$           |
| c) $N=\text{antilog}(\text{attn in dB}/20)$ | d) $N=\text{antilog}(20/\text{attn in dB})$ |
- 14) The driving point impedance is defined as \_\_\_\_\_.
- a) Ratio of transform voltage to transform current at same port
  - b) Ratio of transform voltage at one port to transform current at other port
  - c) Both a and b
  - d) None of the above

**S.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
CIRCUITS & NETWORKS**

Day & Date: Thursday, 12-12-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full marks.

**Section – I**

**Q.2 Answer any four from the following questions.**

**16**

- a) Find the Norton equivalent circuit between the points A and B in figure 1?

- b) Find in 1 figure 2 using superposition theorem?

- c) A  $50\mu\text{F}$ , when connected in series with a coil having  $40\Omega$  resistance, resonates at  $1000\text{Hz}$ . Find the inductance of the coil. Also obtain the maximum current if the applied voltage is  $100\text{V}$ .  
d) Find Y-parameters for the network shown in figure 3.

- e) Derive h-parameters for two port network in terms of voltage. Current and draw h-parameter equivalent circuit.

**Q.3 Answer any two from the following questions**

- a) Find the value of R in figure 4 for which maximum power transfer takes place and hence find the maximum power delivered to R?

figure 4

- b) Derive the expression for frequency at which the Voltage across inductor will be maximum in series resonance circuit.  
 c) Determine Z parameters for  $\pi$  type network shown in figure 5.

figure 5.

**Section – II**

**Q.4 Answer any four from the following questions**

- a) Determine the current  $i(t)$  for  $t \geq 0$  if initial voltage on capacitor  $V_c(0) = 4V$  for the circuit shown in figure 6.

figure 6.

- b) Design a T pad attenuator to give an attenuation of 60dB and to work in a line of  $500\Omega$  impedance.  
 c) Plot the pole zero diagram for  $H(s) = 2s / [(s+2)(s^2+2s+2)]$   
 d) Design a k-type high-pass filter (T and  $\pi$ ) with, a cut-off frequency of 1kHz with a terminated design impedance of  $800\Omega$   
 e) A series RL circuit with  $R=30\Omega$  and  $L = 15H$  has a constant voltage  $V=60V$  applied at  $t = 0$  as shown in figure 7. Determine the current  $i(t)$  and the voltage  $v(t)$  across the resistance

figure 7

**Q.5 Answer any two from the following questions**

- a) Explain the concept of complex frequency and significance of poles and zeros.
- b) Derive the expression for step response (current) for series RL circuit. Also derive the expression for time constant.
- c) Design a k-type band pass T and  $\pi$  type filter having a design impedance of  $500\Omega$  and cut-off frequencies 1kHz and 10kHz.

**S.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
CIRCUITS & NETWORKS**

Day & Date: Thursday, 12-12-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) In RC series circuit  $R = 2\Omega$ ,  $C = 2\mu\text{F}$  and 10V dc is applied. Then what is the value of current at steady state?
 

|        |        |
|--------|--------|
| a) 0A  | b) 5 A |
| c) 20A | d) 10A |
- 2) Time constant of RL series circuit is \_\_\_\_\_.
 

|           |          |
|-----------|----------|
| a) $2L/R$ | b) $L/R$ |
| c) $RL$   | d) $R/L$ |
- 3) Transients are presents in the circuit when the circuit is having \_\_\_\_\_.
 

|      |                  |
|------|------------------|
| a) R | b) L             |
| c) C | d) Either L or C |
- 4) An ideal filter is one which \_\_\_\_\_.
 

|                                      |
|--------------------------------------|
| a) Zero attenuation in pass band     |
| b) Infinite attenuation in pass band |
| c) No attenuation in stop band       |
| d) None of the above                 |
- 5) A band elimination filter is one which \_\_\_\_\_.
 

|                                                                          |
|--------------------------------------------------------------------------|
| a) Attenuates ail frequencies less than lower cut off frequency          |
| b) Attenuates all frequencies greater than lower cut off frequency       |
| c) Attenuates all frequencies between lower and higher cut off frequency |
| d) None of the above                                                     |
- 6) Relation between neper and decibel is \_\_\_\_\_.
 

|                                               |                                               |
|-----------------------------------------------|-----------------------------------------------|
| a) $N = \log(\text{attn in dB}/20)$           | b) $N = \log(20/\text{attn in dB})$           |
| c) $N = \text{antilog}(\text{attn in dB}/20)$ | d) $N = \text{antilog}(20/\text{attn in dB})$ |
- 7) The driving point impedance is defined as \_\_\_\_\_.
 

|                                                                              |
|------------------------------------------------------------------------------|
| a) Ratio of transform voltage to transform current at same port              |
| b) Ratio of transform voltage at one port to transform current at other port |
| c) Both a and b                                                              |
| d) None of the above                                                         |

- 8) The superposition theorem is applicable on \_\_\_\_\_.  
a) Both Linear and non linear circuits  
b) Linear circuits only  
c) Non Linear circuits only  
d) None of the above
- 9) For maximum transfer of power the source resistance must be \_\_\_\_\_.  
a) Equal to load resistance                      b) less than load resistance  
c) Greater than load resistance                d) None of the above
- 10) If the value of resonant frequency is 50 kHz in a series RLC circuit along with the bandwidth of about 1 kHz, then what would be the value of quality factor?  
a) 5                                                      b) 50  
c) 100                                                  d) 500
- 11) What would be the value of impedance of a parallel resonant circuit at anti resonance condition?  
a) Resistive & maximum                      b) Resistive & minimum  
c) Reactive & maximum                        d) Reactive & minimum
- 12) How is the short circuit reverse transfer admittance ( $Y_{12}$ ) calculated?  
a)  $V_2/11$  (keeping 12 =0)                      b)  $12/V_1$  (keeping  $V_2=0$ )  
c)  $11/V_2$  (keeping  $V_1 = 0$ )                      d)  $V_1/12$  (keeping 11 =0)
- 13) In a certain series resonant circuit,  $V_C = 125V$ .  $V_L = 125V$ , and  $V_R = 40V$ . The value of the source voltage is \_\_\_\_\_.  
a) 50V                                                      b) 125V  
c) 40V                                                      d) 250V
- 14) Which elements act as independent variables in Z-parameters?  
a) Current                                                      b) Voltage  
c) Both a and b                                              d) None of the above

**S.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
CIRCUITS & NETWORKS**

Day & Date: Thursday, 12-12-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 56

**Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full marks.

**Section – I**

**Q.2 Answer any four from the following questions.**

**16**

a) Find the Norton equivalent circuit between the points A and B in figure 1?

b) Find in 1 figure 2 using superposition theorem?

c) A  $50\mu\text{F}$ , when connected in series with a coil having  $40\Omega$  resistance, resonates at  $1000\text{Hz}$ . Find the inductance of the coil. Also obtain the maximum current if the applied voltage is  $100\text{V}$ .

d) Find Y-parameters for the network shown in figure 3.

e) Derive h-parameters for two port network in terms of voltage. Current and draw h-parameter equivalent circuit.

**Q.3 Answer any two from the following questions**

- a) Find the value of R in figure 4 for which maximum power transfer takes place and hence find the maximum power delivered to R?

figure 4

- b) Derive the expression for frequency at which the Voltage across inductor will be maximum in series resonance circuit.  
 c) Determine Z parameters for  $\pi$  type network shown in figure 5.

figure 5.

**Section – II**

**Q.4 Answer any four from the following questions**

- a) Determine the current  $i(t)$  for  $t \geq 0$  if initial voltage on capacitor  $V_c(0) = 4V$  for the circuit shown in figure 6.

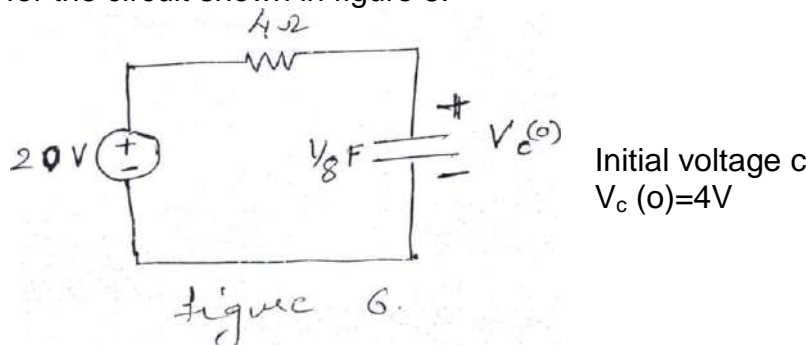

figure 6.

- b) Design a T pad attenuator to give an attenuation of 60dB and to work in a line of  $500\Omega$  impedance.  
 c) Plot the pole zero diagram for  $H(s) = 2s / [(s+2)(s^2+2s+2)]$   
 d) Design a k-type high-pass filter (T and  $\pi$ ) with, a cut-off frequency of 1kHz with a terminated design impedance of  $800\Omega$   
 e) A series RL circuit with  $R=30\Omega$  and  $L = 15H$  has a constant voltage  $V=60V$  applied at  $t = 0$  as shown in figure 7. Determine the current  $i(t)$  and the voltage  $v(t)$  across the resistance

figure 7

**Q.5 Answer any two from the following questions**

- a) Explain the concept of complex frequency and significance of poles and zeros.
- b) Derive the expression for step response (current) for series RL circuit. Also derive the expression for time constant.
- c) Design a k-type band pass T and  $\pi$  type filter having a design impedance of  $500\Omega$  and cut-off frequencies 1kHz and 10kHz.

 2) Figures to the right indicate full marks.  
 3) Draw neat diagrams.  
 4) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) In a four variable K-map eight adjacent cells give \_\_\_\_\_.  
 a) Single variable term                      b) Two variable term  
 c) Three variable term                      d) Four variable term
  
- 2) In a 4 bit full adder how many half adders and OR gates are required?  
 a) 8 and 4                                      b) 7 and 4  
 c) 7 and 3                                      d) 8 and 3
  
- 3) Consider the following statements for a multiplexer \_\_\_\_\_.  
 i) selects one of the several inputs and steers it to the output  
 ii) routes the data from a single input to many outputs  
 iii) converts parallel data into serial data  
 iv) is a combinational circuit  
 Which of the above is correct for a Multiplexer?  
 a) i, ii, iii                                      b) i, iii, iv  
 c) i, ii, iv                                      d) ii, iii, iv
  
- 4) Consider the following statements.  
 i) ECL has least propagation delay  
 ii) TTL has largest fan out  
 iii) CMOS has highest noise margin  
 iv) TTL has lowest power dissipation  
 Which of the following are correct for above statements?  
 a) i & iii                                      b) ii & iv  
 c) iii & iv                                      d) i & ii
  
- 5) A JK flip flop can be converted to D flip flop by, \_\_\_\_\_.  
 a) Connecting both J and K terminals to D  
 b) Connecting J terminal to D and leaving K open  
 c) Connecting K terminal to D and leaving J open  
 d) Connecting J terminal to D and K terminal to D through an inverter
  
- 6) How many NAND gates are used to construct Active High S-R flip flop?  
 a) 5                                              b) 3  
 c) 4                                              d) 8

- 7) In comparison with Serial adder the Parallel adder \_\_\_\_\_.  
a) is slower                                  b) has same speed  
c) is faster                                    d) has delayed output
- 8) Maximum MOD number for a 2-bit binary counter is \_\_\_\_\_.  
a) 4                                              b) 3  
c) 8                                              d) 16
- 9) To serially shift a 5-bit of data into a shift register, there must be \_\_\_\_\_.  
a) 1 clock pulse                              b) 4 clock pulses  
c) 5 clock pulses                              d) 1 clock pulse for each 1
- 10) To operate correctly, starting a ring counter requires \_\_\_\_\_.  
a) presetting all the flip-flops  
b) clearing all the flip-flops  
c) presetting one flip-flop and clearing all the others  
d) none of the above
- 11) How many minimum number of flip-flops are required to make a MOD-28 binary counter?  
a) 32                                              b) 16  
c) 5                                                d) 4
- 12) When two counters are cascaded, the overall MOD number is equal to the \_\_\_\_\_ of their individual MOD numbers.  
a) Product                                      b) Sum  
c) Log                                              d) Reciprocal
- 13) Clock signals are used in sequential logic circuits \_\_\_\_\_.  
a) To tell current time  
b) To tell how propagation delay  
c) To carry serial data signals  
d) To synchronize events in various parts of the system
- 14) How many flip-flops are in the IC7495?  
a) 1                                                b) 2  
c) 3                                                d) 4

**S.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**DIGITAL TECHNIQUES**

Day & Date: Saturday, 14-12-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Draw neat diagrams.  
 4) Assume suitable data if necessary.

**Section – I**

**Q.2 Answer any four. 16**

- a) Implement the following Boolean function F, using NOR logic  

$$F(A, B, C, D) = \sum(0, 4, 8, 9, 10, 11, 12, 14)$$
- b) Explain and design a 2-bit magnitude comparator which should compare x & y and give output as x>y, x=y and x<y.
- c) Design an Odd Parity Generator for 3 bit binary input.
- d) Design and explain 2 input NAND gate using CMOS.
- e) Explain 1-bit latch using NAND logic.

**Q.3 Solve any two. 12**

- a) Simplify the following functions, and implement using NAND gate  

$$F(A, B, C, D) = AC'D' + A'C + ABC + AB'C + A'C'D'$$
- b) Explain General model for flip-flop conversion and convert D-flip flop to T flip-flop.
- c) Define and explain following characteristics of a logic family
  - 1) Fan-out
  - 2) Propagation Delay
  - 3) Power Dissipation
  - 4) Figure of Merit (Speed Power Product)

**Section – II**

**Q.4 Attempt any four. 16**

- a) Explain in detail SIPO Shift register with example & waveform.
- b) Design 2 bit synchronous down counter using T Flip flop.
- c) Write VHDL code for Comparator.
- d) Explain Mealy machine with block diagram & example.
- e) Design a PROM PLD based 3 bit binary to gray converter.

**Q.5 Attempt any two. 12**

- a) Explain in detail ring counter & twisted ring counter with waveform.
- b) Write a short note on IC 7490. Design MOD 7 counter using IC 7490.
- c) Explain sequence detector with example.

- a) Implement the following Boolean function F, using NOR logic  
 $F(A, B, C, D) = \sum(0, 4, 8, 9, 10, 11, 12, 14)$
- b) Explain and design a 2-bit magnitude comparator which should compare x & y and give output as x>y, x=y and x<y.
- c) Design an Odd Parity Generator for 3 bit binary input.
- d) Design and explain 2 input NAND gate using CMOS.
- e) Explain 1-bit latch using NAND logic.

**Q.3 Solve any two. 12**

- a) Simplify the following functions, and implement using NAND gate  
 $F(A, B, C, D) = AC'D' + A'C + ABC + AB'C + A'C'D'$
- b) Explain General model for flip-flop conversion and convert D-flip flop to T flip-flop.
- c) Define and explain following characteristics of a logic family
  - 1) Fan-out
  - 2) Propagation Delay
  - 3) Power Dissipation
  - 4) Figure of Merit (Speed Power Product)

**Section – II**

**Q.4 Attempt any four. 16**

- a) Explain in detail SIPO Shift register with example & waveform.
- b) Design 2 bit synchronous down counter using T Flip flop.
- c) Write VHDL code for Comparator.
- d) Explain Mealy machine with block diagram & example.
- e) Design a PROM PLD based 3 bit binary to gray converter.

**Q.5 Attempt any two. 12**

- a) Explain in detail ring counter & twisted ring counter with waveform.
- b) Write a short note on IC 7490. Design MOD 7 counter using IC 7490.
- c) Explain sequence detector with example.

**S.E. (Part - I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**DATA STRUCTURES USING 'C'**

Day & Date: Tuesday, 17-12-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 70

- Instructions:** 1) Q.No.1 is compulsory and should be solved in first 30 Minutes in answer Book Page No.3  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) A linked list type that navigates for an item in forward manner only, is called \_\_\_\_\_.
  - a) Simple Linked List
  - b) Linear Linked List
  - c) Doubly Linked List
  - d) Circular linked List
- 2) A sequence of data structures connected together through links are known to be \_\_\_\_\_.
  - a) Connected list
  - b) Linked list
  - c) Traversed link
  - d) Compound List
- 3) Which if the following is/are the levels of implementation of data structure \_\_\_\_\_.
  - a) Abstract level
  - b) Application level
  - c) Implementation level
  - d) All of the above
- 4) A binary search tree whose left sub tree and right sub tree differ in height by at most 1 unit is called \_\_\_\_\_.
  - a) AVL tree
  - b) Red-black tree
  - c) Lemma tree
  - d) None of the above
- 5) \_\_\_\_\_ level is where the model becomes compatible executable code.
  - a) Abstract level
  - b) Application level
  - c) Implementation level
  - d) All of the above
- 6) Stack is also called as \_\_\_\_\_.
  - a) Last in first out
  - b) First in last out
  - c) Last in last out
  - d) First in first out
- 7) \_\_\_\_\_ is not the component of data structure.
  - a) Operations
  - b) Storage Structures
  - c) Algorithms
  - d) None of above
- 8) \_\_\_\_\_ is very useful in situation when data have to stored and then retrieved in reverse order.
  - a) Stack
  - b) Queue
  - c) List
  - d) Link list
- 9) Which data structure allows deleting data elements from and inserting at rear?
  - a) Stacks
  - b) Queues
  - c) Dequeues
  - d) Binary search tree

- 10) Which of the following is non-linear data structure?  
a) Stacks  
b) List  
c) Strings  
d) Trees
- 11) Which of the following data structure is linear type?  
a) Graph  
b) Trees  
c) Binary tree  
d) Stack
- 12) Identify the data structure which allows deletions at both ends of the list but insertion at only one end.  
a) Input restricted dequeue  
b) Output restricted dequeue  
c) Priority queues  
d) Stack
- 13) Which data structure is used in breadth first search of a graph to hold nodes?  
a) Stack  
b) Queue  
c) Tree  
d) Array
- 14) A directed graph is \_\_\_\_\_ if there is a path from each vertex to every other vertex in the digraph.  
a) Weakly connected  
b) Strongly Connected  
c) Tightly Connected  
d) Linearly Connected

Day & Date: Tuesday, 17-12-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 56

**Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**SECTION I**

- Q.2 Attempt any three.** **12**
- a) Define queue & explain its operations.
  - b) Draw and explain the structure of simple link list.
  - c) Write a program for Fibonacci series using recursion.
  - d) Differentiate between Stack and Queue.
  - e) Define Infix, Prefix & Postfix with example.
- Q.3 Attempt any two.** **16**
- a) Write a program for factorial using recursion & explain the operations of Stack.
  - b) List & Explain different operation of Circular link List.
  - c) Explain DEQUE & Priority Queue.

**SECTION II**

- Q.4 Attempt any three.** **12**
- a) Define sibling, root, leaf node, Parent node.
  - b) Explain open addressing and closed addressing collision resolving techniques.
  - c) Define Hashing, Hash function, Collision.
  - d) Write the time complexity of Insertion sort, Bubble sort, Selection sort, Merge sort.
- Q.5 Attempt any two.** **16**
- a) Explain Quick sort with example.
  - b) Write a program for linear search & explain.
  - c) Explain DFS & BFS traverse with example.

Day & Date: Friday, 22-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Question 1 is compulsory; it should be solved in first 30 minutes in Answer book.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.  
 4) Use of electronic component datasheet is allowed.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct option****14**

- 1) A direct coupled amplifier is also called as \_\_\_\_\_.  
 a) RC coupled amplifier                      b) DC amplifier  
 c) AC amplifier                                  d) None of these
- 2) Darlington pair consists of two \_\_\_\_\_ cascaded.  
 a) CB,CB                                          b) CE,CE  
 c) CC,CC                                          d) CE,CC
- 3) Wien bridge consists of \_\_\_\_\_ as feedback network.  
 a) Three resistor & capacitor network  
 b) Two resistor & capacitor network  
 c) Lead Lag network made up of R&C  
 d) Inductor and Capacitor network
- 4) Cascading of amplifier results in \_\_\_\_\_.  
 a) Increasing gain and Bandwidth  
 b) Decreasing gain and bandwidth  
 c) Increasing gain and decrease in bandwidth  
 d) No effect on gain and bandwidth
- 5) A transconductance amplifier has \_\_\_\_\_ input resistance and \_\_\_\_\_ output resistance.  
 a) Zero, Infinity                                  b) Zero, Zero  
 c) Infinity, Zero                                  d) Infinity, Infinity
- 6) Crystal oscillators are preferred because \_\_\_\_\_.  
 a) It works at very high frequency      b) It produces stable oscillation  
 c) It produces high output swing        d) None of these
- 7) The oscillation in LC circuit is produced due to \_\_\_\_\_.  
 a) Transfer of energy between L & C  
 b) Transfer of energy between R & C  
 c) Both a & b  
 d) None of these

- 8) Pre regulator circuit is \_\_\_\_\_.
- a) Constant voltage source
  - b) Constant current source
  - c) Stability factor improvement circuit
  - d) Both b & c
- 9) The instantaneous voltage at the input of IC regulator must always \_\_\_\_\_.
- a) Exceed the output voltage
  - b) Lower than the DC output voltage
  - c) Equal to the DC output voltage
  - d) None of these
- 10) For IC regulators input capacitor is required for \_\_\_\_\_.
- a) Short circuit protection
  - b) Improve transient response
  - c) Over voltage protection
  - d) Reducing unwanted oscillations in input
- 11) Schmitt trigger is \_\_\_\_\_.
- a) Amplifier
  - b) Rectifier
  - c) Oscillator
  - d) All of these
- 12) Power dissipated in case of astable multivibrator is due to \_\_\_\_\_.
- a)  $V_{cc}$
  - b)  $V_{cc}, R_c$
  - c)  $R_c$
  - d) None
- 13) A sine wave can be converted into square wave using \_\_\_\_\_.
- a) Astable multivibrator
  - b) Monostable multivibrator
  - c) Rectifier
  - d) Schmitt trigger
- 14) IC 555 can act as divide by n network in \_\_\_\_\_ mode.
- a) Astable
  - b) Monostable
  - c) Bostable
  - d) All of these

**S.E. (Part - II) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ELECTRONIC CIRCUIT ANALYSIS AND DESIGN – II**

Day & Date: Friday, 22-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.  
 4) Use of electronic component datasheet is allowed.

**Section - I**

- Q.2 Solve any four:** **16**
- Derive expression for mid frequency voltage gain of two stage RC coupled amplifier.
  - What is transformer coupled amplifier class A power amplifier and derive its efficiency.
  - Explain working of crystal oscillator.
  - An amplifier has a midband gain of 1500 and a bandwidth of 4MHz, the midband gain reduces to 150 when a negative feedback is applied. Determine value of feedback factor and the bandwidth. (0.006,40MHz).
  - Compare voltage series, current series, voltage shunt, current shunt feedback amplifier.
- Q.3 Solve any two:** **12**
- State Barkhausen's criteria for oscillation and derive expression for frequency of oscillation for Wien bridge oscillator.
  - Design voltage series feedback amplifier to provide voltage gain of 100, use supply voltage of 12V.
  - Explain frequency response of transformer coupled amplifier.

**Section - II**

- Q.4 Solve any four:** **16**
- Design a negative regulator to provide 4V to 16V regulated output using variable regulator IC. Use  $I_{adj}=100\mu A$ .
  - Explain working of transistorized series voltage regulator.
  - Explain working of Schmitt trigger using IC 555.
  - Design a timer using IC 555 to turn OFF LED for 2 minute when trigger pulse is given to IC 555, Initially LED is in ON condition.
  - Derive frequency of oscillation for astable multivibrator using transistor.
- Q.5 Solve any two:** **12**
- Design a timer which repeatedly turning ON & OFF as follows.
    - ON time variation = 1.5 msec to 3.5 msec
    - OFF time variation = 1 msec to 2 msec.
  - Design a transistorized series voltage regulator for 12V, 1A when input voltage given is 16V.
  - Explain ratings of IC regulators in detail and Design a dual regulated power supply using 317 & 337 to provide +- 12V to +- 25V.

 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.  
 4) Use of electronic component datasheet is allowed.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct option****14**

- 1) Pre regulator circuit is \_\_\_\_\_.
  - a) Constant voltage source
  - b) Constant current source
  - c) Stability factor improvement circuit
  - d) Both b & c
- 2) The instantaneous voltage at the input of IC regulator must always \_\_\_\_\_.
  - a) Exceed the output voltage
  - b) Lower than the DC output voltage
  - c) Equal to the DC output voltage
  - d) None of these
- 3) For IC regulators input capacitor is required for \_\_\_\_\_.
  - a) Short circuit protection
  - b) Improve transient response
  - c) Over voltage protection
  - d) Reducing unwanted oscillations in input
- 4) Schmitt trigger is \_\_\_\_\_.
 

|               |                 |
|---------------|-----------------|
| a) Amplifier  | b) Rectifier    |
| c) Oscillator | d) All of these |
- 5) Power dissipated in case of astable multivibrator is due to \_\_\_\_\_.
 

|             |                  |
|-------------|------------------|
| a) $V_{cc}$ | b) $V_{cc}, R_c$ |
| c) $R_c$    | d) None          |
- 6) A sine wave can be converted into square wave using \_\_\_\_\_.
 

|                          |                             |
|--------------------------|-----------------------------|
| a) Astable multivibrator | b) Monostable multivibrator |
| c) Rectifier             | d) Schmitt trigger          |
- 7) IC 555 can act as divide by n network in \_\_\_\_\_ mode.
 

|             |                 |
|-------------|-----------------|
| a) Astable  | b) Monostable   |
| c) Bostable | d) All of these |
- 8) A direct coupled amplifier is also called as \_\_\_\_\_.
 

|                         |                  |
|-------------------------|------------------|
| a) RC coupled amplifier | b) DC amplifier  |
| c) AC amplifier         | d) None of these |

- 9) Darlington pair consists of two \_\_\_\_\_ cascaded.
- |           |           |
|-----------|-----------|
| a) CB, CB | b) CE, CE |
| c) CC, CC | d) CE, CC |
- 10) Wien bridge consists of \_\_\_\_\_ as feedback network.
- |                                       |
|---------------------------------------|
| a) Three resistor & capacitor network |
| b) Two resistor & capacitor network   |
| c) Lead Lag network made up of R&C    |
| d) Inductor and Capacitor network     |
- 11) Cascading of amplifier results in \_\_\_\_\_.
- |                                              |
|----------------------------------------------|
| a) Increasing gain and Bandwidth             |
| b) Decreasing gain and bandwidth             |
| c) Increasing gain and decrease in bandwidth |
| d) No effect on gain and bandwidth           |
- 12) A transconductance amplifier has \_\_\_\_\_ input resistance and \_\_\_\_\_ output resistance.
- |                   |                       |
|-------------------|-----------------------|
| a) Zero, Infinity | b) Zero, Zero         |
| c) Infinity, Zero | d) Infinity, Infinity |
- 13) Crystal oscillators are preferred because \_\_\_\_\_.
- |                                    |                                   |
|------------------------------------|-----------------------------------|
| a) It works at very high frequency | b) It produces stable oscillation |
| c) It produces high output swing   | d) None of these                  |
- 14) The oscillation in LC circuit is produced due to \_\_\_\_\_.
- |                                     |
|-------------------------------------|
| a) Transfer of energy between L & C |
| b) Transfer of energy between R & C |
| c) Both a & b                       |
| d) None of these                    |

  - c) Explain ratings of IC regulators in detail and Design a dual regulated power supply using 317 & 337 to provide +- 12V to +- 25V.

- 10) De-emphasis is used \_\_\_\_\_.
- a) To attenuate high modulation frequencies
  - b) To attenuate low modulation frequencies
  - c) To attenuate mid-band modulation frequencies
  - d) To attenuate overall modulation frequencies
- 11) In FM system, if the depth of modulation is doubled, the output power \_\_\_\_\_.
- a) increased by factor of  $\sqrt{2}$
  - b) increased by factor of  $\sqrt{3}$
  - c) increased by factor of 2
  - d) remains at unmodulated value
- 12) Frequency of dialing tone is \_\_\_\_\_.
- a) 50Hz
  - b) 33Hz
  - c) 800Hz
  - d) 133Hz
- 13) A folded dipole consists of \_\_\_\_\_.
- a) Single element
  - b) Two elements
  - c) Three elements
  - d) Four elements
- 14) Strowger switching system is \_\_\_\_\_ type of telephone system.
- a) electronic
  - b) Manual
  - c) automatic
  - d) Electromechanical

**ANALOG COMMUNICATION**

Day & Date: Saturday, 23-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

- Q.2 Attempt any four of the following questions. 16**
- a) Define and describe Independent Side Band (ISB) transmission with block diagram.
  - b) Explain the effect of cascade connection on signal to noise ratio.
  - c) Describe Frequency Division Multiplexing in brief.
  - d) Write a note on Automatic Gain Control (AGC). Why it is required?
  - e) Derive the expression for frequency spectrum of AM wave with bandwidth.
- Q.3 Attempt any two of the following questions. 12**
- a) Calculate the percentage power saving when carrier and one of the sidebands are suppressed in an amplitude modulated wave to a depth of 40 and 60 percent.
  - b) What are the different types of DSBSC generation? Explain DSBSC using JFET modulator.
  - c) Briefly comment on the importance of S/N ratio in a communication system.

**Section – II**

- Q.4 Attempt any four of the following questions. 16**
- a) With application explain horn antenna.
  - b) Compare wideband FM and narrowband FM.
  - c) With the help of neat diagram explain working of Strowger switching system.
  - d) Explain the working principle of ratio detector.
  - e) Which types of tones used in telephony?
- Q.5 Attempt any two of the following questions. 12**
- a) What are the types of wave propagation? Explain any one of them in detail.
  - b) Draw and explain FET reactance modulator used for FM modulation.
  - c) List the relative advantages and disadvantages of AM, FM and PM.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The amplitude of sidebands in FM signal are dependent upon mathematical process known as \_\_\_\_\_.  
 a) Gaussian function                                                b) Shannon's function  
 c) Bessel function                                                      d) Fourier function
- 2) Which type of noise does not occur in transistor?  
 a) Shot noise                                                              b) Flicker noise  
 c) Partition noise                                                        d) Resistance noise
- 3) De-emphasis is used \_\_\_\_\_.  
 a) To attenuate high modulation frequencies  
 b) To attenuate low modulation frequencies  
 c) To attenuate mid-band modulation frequencies  
 d) To attenuate overall modulation frequencies
- 4) In FM system, if the depth of modulation is doubled, the output power \_\_\_\_\_.  
 a) increased by factor of  $\sqrt{2}$                                           b) increased by factor of  $\sqrt{3}$   
 c) increased by factor of 2                                              d) remains at unmodulated value
- 5) Frequency of dialing tone is \_\_\_\_\_.  
 a) 50Hz                                                                        b) 33Hz  
 c) 800Hz                                                                      d) 133Hz
- 6) A folded dipole consists of \_\_\_\_\_.  
 a) Single element                                                        b) Two elements  
 c) Three elements                                                         d) Four elements
- 7) Strowger switching system is \_\_\_\_\_ type of telephone system.  
 a) electronic                                                                b) Manual  
 c) automatic                                                                 d) Electromechanical
- 8) Thermal noise voltage in resistor R is proportional to \_\_\_\_\_.  
 a)  $\sqrt{R}$                                                                         b) R  
 c)  $R^2$                                                                           d) independent of R
- 9) Standard intermediate frequency used for AM receiver is \_\_\_\_\_.  
 a) 455 MHz                                                                  b) 455 KHz  
 c) 455 Hz                                                                      d) None of these

- 10) In the TV receivers, the device used for tuning the receiver to the incoming signal is \_\_\_\_\_.
- a) Varactor diode                      b) High pass Filter  
c) Zener diode                         d) Low pass filter
- 11) In TV transmission, picture signal is \_\_\_\_\_ modulated.
- a) Frequency                              b) Phase  
c) Amplitude                             d) All of these
- 12) If a radio receiver amplifies all the signal frequencies equally well, it is said to have high \_\_\_\_\_.
- a) Sensitivity                              b) Selectivity  
c) Distortion                             d) Fidelity
- 13) What is the ratio of modulating power to total power at 100% modulation?
- a) 1:3                                        b) 1:2  
c) 2:3                                        d) 3:2
- 14) For a three stage cascade amplifier, calculate the overall noise figure when each stage has a gain of 12 dB and noise figure of 8dB.
- a) 12                                         b) 24  
c) 15                                         d) 13.55

**S.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics and Telecommunication Engineering**  
**ANALOG COMMUNICATION**

Day & Date: Saturday, 23-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

- Q.2 Attempt any four of the following questions. 16**
- a) Define and describe Independent Side Band (ISB) transmission with block diagram.
  - b) Explain the effect of cascade connection on signal to noise ratio.
  - c) Describe Frequency Division Multiplexing in brief.
  - d) Write a note on Automatic Gain Control (AGC). Why it is required?
  - e) Derive the expression for frequency spectrum of AM wave with bandwidth.
- Q.3 Attempt any two of the following questions. 12**
- a) Calculate the percentage power saving when carrier and one of the sidebands are suppressed in an amplitude modulated wave to a depth of 40 and 60 percent.
  - b) What are the different types of DSBSC generation? Explain DSBSC using JFET modulator.
  - c) Briefly comment on the importance of S/N ratio in a communication system.

**Section – II**

- Q.4 Attempt any four of the following questions. 16**
- a) With application explain horn antenna.
  - b) Compare wideband FM and narrowband FM.
  - c) With the help of neat diagram explain working of Strowger switching system.
  - d) Explain the working principle of ratio detector.
  - e) Which types of tones used in telephony?
- Q.5 Attempt any two of the following questions. 12**
- a) What are the types of wave propagation? Explain any one of them in detail.
  - b) Draw and explain FET reactance modulator used for FM modulation.
  - c) List the relative advantages and disadvantages of AM, FM and PM.

Seat  
No.

Day & Date: Saturday, 23-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Question 1 is compulsory, It should be solved in first 30 minutes in Answer book.  
2) Figures to the right indicates full marks.  
3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) If a radio receiver amplifies all the signal frequencies equally well, it is said to have high \_\_\_\_\_.  
a) Sensitivity  
b) Selectivity  
c) Distortion  
d) Fidelity
- 2) What is the ratio of modulating power to total power at 100% modulation?  
a) 1:3  
b) 1:2  
c) 2:3  
d) 3:2
- 3) For a three stage cascade amplifier, calculate the overall noise figure when each stage has a gain of 12 dB and noise figure of 8dB.  
a) 12  
b) 24  
c) 15  
d) 13.55
- 4) The amplitude of sidebands in FM signal are dependent upon mathematical process known as \_\_\_\_\_.  
a) Gaussian function  
b) Shannon's function  
c) Bessel function  
d) Fourier function
- 5) Which type of noise does not occur in transistor?  
a) Shot noise  
b) Flicker noise  
c) Partition noise  
d) Resistance noise
- 6) De-emphasis is used \_\_\_\_\_.  
a) To attenuate high modulation frequencies  
b) To attenuate low modulation frequencies  
c) To attenuate mid-band modulation frequencies  
d) To attenuate overall modulation frequencies
- 7) In FM system, if the depth of modulation is doubled, the output power \_\_\_\_\_.  
a) increased by factor of  $\sqrt{2}$   
b) increased by factor of  $\sqrt{3}$   
c) increased by factor of 2  
d) remains at unmodulated value
- 8) Frequency of dialing tone is \_\_\_\_\_.  
a) 50Hz  
b) 33Hz  
c) 800Hz  
d) 133Hz
- 9) A folded dipole consists of \_\_\_\_\_.  
a) Single element  
b) Two elements  
c) Three elements  
d) Four elements

- 10) Strowger switching system is \_\_\_\_\_ type of telephone system.
- a) electronic
  - b) Manual
  - c) automatic
  - d) Electromechanical
- 11) Thermal noise voltage in resistor R is proportional to \_\_\_\_\_.
- a)  $\sqrt{R}$
  - b) R
  - c)  $R^2$
  - d) independent of R
- 12) Standard intermediate frequency used for AM receiver is \_\_\_\_\_.
- a) 455 MHz
  - b) 455 KHz
  - c) 455 Hz
  - d) None of these
- 13) In the TV receivers, the device used for tuning the receiver to the incoming signal is \_\_\_\_\_.
- a) Varactor diode
  - b) High pass Filter
  - c) Zener diode
  - d) Low pass filter
- 14) In TV transmission, picture signal is \_\_\_\_\_ modulated.
- a) Frequency
  - b) Phase
  - c) Amplitude
  - d) All of these

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.**

**14**

- 1) In an open loop control system \_\_\_\_\_.
  - a) output is independent of control input
  - b) output is dependent on control input
  - c) only system parameters have effect on the control output
  - d) None of the above
- 2) \_\_\_\_\_ has tendency to oscillate.
  - a) Open loop
  - b) Closed loop
  - c) Both a) and b)
  - d) Neither a) nor b)
- 3) Zero initial condition for a system means \_\_\_\_\_.
  - a) Input reference signal is zero
  - b) Zero stored energy
  - c) No initial movement of moving parts
  - d) System is at rest and no energy is stored in any of its components
- 4) The capacitance, in force-current analogy, is analogous to \_\_\_\_\_.
  - a) Momentum
  - b) Velocity
  - c) Displacement
  - d) Mass
- 5) The type 1 system has \_\_\_\_\_ at the origin.
  - a) no pole
  - b) net pole
  - c) simple pole
  - d) two poles
- 6) When two blocks connected in parallel, resultant block is the \_\_\_\_\_ of individual block.
  - a) Product
  - b) Division
  - c) Sum
  - d) Subtraction
- 7) The first two rows of Routh tabulation of a third order system are
 

|       |   |   |
|-------|---|---|
| $S^3$ | 2 | 2 |
| $S^2$ | 4 | 4 |

  - a) The characteristic equation has one root in right half s-plane
  - b) The characteristic equation has two roots on the  $j\omega$  axis at  $s=\pm j$
  - c) The characteristic equation has two roots on the  $j\omega$  axis at  $s=\pm 2j$
  - d) None of the these

- 8) Bode plot of the constant is a \_\_\_\_\_.  
a) Line with a slope of -20dB/decade  
b) Line with a slope of -6 dB/decade  
c) Line with a slope of -40dB/decade  
d) Straight line parallel to frequency axis
- 9) In a type-I system, the steady state acceleration error is \_\_\_\_\_.  
a) Zero  
b) Unity  
c) Infinity  
d) None of these
- 10) In critically damped system, the damping factor of the system is \_\_\_\_\_.  
a) Zero  
b) Unity  
c) Less than unity  
d) greater than unity
- 11) The addition of zero in the transfer function causes \_\_\_\_\_.  
a) Phase lead compensation  
b) Phase lag compensation  
c) Lag- lead compensation  
d) None of these
- 12) The phase shift of the second order system with transfer function  $1/S^2$  is \_\_\_\_\_.  
a)  $180^0$   
b)  $-180^0$   
c)  $0^0$   
d)  $90^0$
- 13) Starting point of Root Locus are \_\_\_\_\_.  
a) open loop poles  
b) close loop poles  
c) open loop zeros  
d) close loop zeros
- 14) A feedback control system has  $G(s)H(s) = \frac{10}{s(s+2)}$ , the ramp error constant is \_\_\_\_\_.  
a) 10  
b) 2  
c) 5  
d) None

**S.E. (Part -II) (Old) (CGPA) Examination Nov/Dec-2019  
ELECTRONICS & TELECOMMUNICATION ENGINEERING  
CONTROL SYSTEMS**

Day & Date: Monday, 25-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Assume the suitable data whenever necessary.

**SECTION I**

**Q.2 Attempt any four:** **16**

- a) Explain with block diagram Liquid level control system.
- b) Differentiate between open loop and closed loop systems.
- c) What is transfer function? Derive transfer function of closed loop control system.
- d) Explain rules for block diagram reduction.
- e) Define relative stability and conditional stability.

**Q.3 a)** Find the transfer function of the system shown below using Mason's gain formula. **06**

**b) Solve any ONE**  
1) Find the transfer function of the following block diagram **06**

2) A unity feedback control system has an open loop transfer function

$$x = \frac{k}{(S + 1)^3(S + 4)}$$

Determine the range of value of k for the closed loop system be stable.

**SECTION II**

**Q.4 Attempt any four** **16**

- a) Explain Lag-Lead compensator.
- b) Explain different standard test signals.
- c) A second order system is given by following equation find its Damping Factor, Delay time, Rise time, peak overshoot and.

$$T(s) = \frac{25}{s^2 + 6s + 25}$$

d) Explain how centroid and breakaway points are calculated in root locus.

- e) Determine the steady state error of given system For Input is  $r(t) = t^2$

$$G(s)H(s) = \frac{100}{s^2(1 + 0.5s)(s + 2)}$$

**Q.5 Attempt any two.**

12

- a) Sketch the bode plot for the given system

$$G(s)H(s) = \frac{80}{s(s + 2)(s + 20)}$$

**Determine:**

- 1) Gain crossover frequency
  - 2) Phase crossover frequency
  - 3) GM and PM
  - 4) Comment on stability of system.
- b) Draw the root locus for the system where K varies between K to infinite.

$$G(s)H(s) = \frac{K}{s(s + 4)(s + 2)}$$

- c) For unity feedback system determine

$$G(s)H(s) = \frac{10(s + 1)}{s^2(s + 2)(s + 10)}$$

- 1) Type of system
- 2) Error co-efficients
- 3)  $1 + 4t + t^2/2$

|             |  |

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.**

**14**

- 1) Bode plot of the constant is a \_\_\_\_\_.
  - a) Line with a slope of -20dB/decade
  - b) Line with a slope of -6 dB/decade
  - c) Line with a slope of -40dB/decade
  - d) Straight line parallel to frequency axis
- 2) In a type-I system, the steady state acceleration error is \_\_\_\_\_.
  - a) Zero
  - b) Unity
  - c) Infinity
  - d) None of these
- 3) In critically damped system, the damping factor of the system is \_\_\_\_\_.
  - a) Zero
  - b) Unity
  - c) Less than unity
  - d) greater than unity
- 4) The addition of zero in the transfer function causes \_\_\_\_\_.
  - a) Phase lead compensation
  - b) Phase lag compensation
  - c) Lag- lead compensation
  - d) None of these
- 5) The phase shift of the second order system with transfer function  $1/S^2$  is \_\_\_\_\_.
  - a)  $180^0$
  - b)  $-180^0$
  - c)  $0^0$
  - d)  $90^0$
- 6) Starting point of Root Locus are \_\_\_\_\_.
  - a) open loop poles
  - b) close loop poles
  - c) open loop zeros
  - d) close loop zeros
- 7) A feedback control system has  $G(s)H(s) = \frac{10}{s(s+2)}$ , the ramp error constant is \_\_\_\_\_.
  - a) 10
  - b) 2
  - c) 5
  - d) None
- 8) In an open loop control system \_\_\_\_\_.
  - a) output is independent of control input
  - b) output is dependent on control input
  - c) only system parameters have effect on the control output
  - d) None of the above

- 9) \_\_\_\_\_ has tendency to oscillate.

  - c) No initial movement of moving parts
  - d) System is at rest and no energy is stored in any of its components
- 11) The capacitance, in force-current analogy, is analogous to \_\_\_\_\_.
- a) Momentum
  - b) Velocity
  - c) Displacement
  - d) Mass
- 12) The type 1 system has \_\_\_\_\_ at the origin.
- a) no pole
  - b) net pole
  - c) simple pole
  - d) two poles
- 13) When two blocks connected in parallel, resultant block is the \_\_\_\_\_ of individual block.
- a) Product
  - b) Division
  - c) Sum
  - d) Subtraction
- 14) The first two rows of Routh tabulation of a third order system are
- |       |  |   |   |
|-------|--|---|---|
| $S^3$ |  | 2 | 2 |
| $S^2$ |  | 4 | 4 |
- a) The characteristic equation has one root in right half s-plane
  - b) The characteristic equation has two roots on the  $j\omega$  axis at  $s=\pm j$
  - c) The characteristic equation has two roots on the  $j\omega$  axis at  $s=\pm 2j$
  - d) None of the these

**S.E. (Part -II) (Old) (CGPA) Examination Nov/Dec-2019  
ELECTRONICS & TELECOMMUNICATION ENGINEERING  
CONTROL SYSTEMS**

Day & Date: Monday, 25-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Assume the suitable data whenever necessary.

**SECTION I**

**Q.2 Attempt any four:** **16**

- Explain with block diagram Liquid level control system.
- Differentiate between open loop and closed loop systems.
- What is transfer function? Derive transfer function of closed loop control system.
- Explain rules for block diagram reduction.
- Define relative stability and conditional stability.

**Q.3 a)** Find the transfer function of the system shown below using Mason's gain formula. **06**

**b)** Solve any ONE  
1) Find the transfer function of the following block diagram **06**

2) A unity feedback control system has an open loop transfer function

$$x = \frac{k}{(S + 1)^3(S + 4)}$$

Determine the range of value of k for the closed loop system be stable.

**SECTION II**

**Q.4 Attempt any four** **16**

- Explain Lag-Lead compensator.
- Explain different standard test signals.
- A second order system is given by following equation find its Damping Factor, Delay time, Rise time, peak overshoot and.

$$T(s) = \frac{25}{s^2 + 6s + 25}$$

d) Explain how centroid and breakaway points are calculated in root locus.

- e) Determine the steady state error of given system For Input is  $r(t) = t^2$

$$G(s)H(s) = \frac{100}{s^2(1 + 0.5s)(s + 2)}$$

**Q.5 Attempt any two.**

12

- a) Sketch the bode plot for the given system

$$G(s)H(s) = \frac{80}{s(s + 2)(s + 20)}$$

**Determine:**

- 1) Gain crossover frequency
  - 2) Phase crossover frequency
  - 3) GM and PM
  - 4) Comment on stability of system.
- b) Draw the root locus for the system where K varies between K to infinite.

$$G(s)H(s) = \frac{K}{s(s + 4)(s + 2)}$$

- c) For unity feedback system determine

$$G(s)H(s) = \frac{10(s + 1)}{s^2(s + 2)(s + 10)}$$

- 1) Type of system
- 2) Error co-efficients
- 3)  $1 + 4t + t^2/2$

|          |  |
|----------|--|
| Seat No. |  |
|----------|--|

**S.E. (Part -II) (Old) (CGPA) Examination Nov/Dec-2019  
ELECTRONICS & TELECOMMUNICATION ENGINEERING  
CONTROL SYSTEMS**

Day & Date: Monday, 25-11-2019  
Time: 02.30 PM To 05.30 PM

Max. Marks: 70

- Instructions:** 1) Q.No.1 is compulsory and should be solved in first 30 Minutes in answer book.  
2) Assume suitable data if required  
3) Figures to right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** **14**

- 1) The type 1 system has \_\_\_\_\_ at the origin.
  - a) no pole
  - b) net pole
  - c) simple pole
  - d) two poles
- 2) When two blocks connected in parallel, resultant block is the \_\_\_\_\_ of individual block.
  - a) Product
  - b) Division
  - c) Sum
  - d) Subtraction
- 3) The first two rows of Routh tabulation of a third order system are
 

|       |   |   |
|-------|---|---|
| $S^3$ | 2 | 2 |
| $S^2$ | 4 | 4 |

  - a) The characteristic equation has one root in right half s-plane
  - b) The characteristic equation has two roots on the  $j\omega$  axis at  $s=\pm j$
  - c) The characteristic equation has two roots on the  $j\omega$  axis at  $s=\pm 2j$
  - d) None of the these
- 4) Bode plot of the constant is a \_\_\_\_\_.
  - a) Line with a slope of -20dB/decade
  - b) Line with a slope of -6 dB/decade
  - c) Line with a slope of -40dB/decade
  - d) Straight line parallel to frequency axis
- 5) In a type-I system, the steady state acceleration error is \_\_\_\_\_.
  - a) Zero
  - b) Unity
  - c) Infinity
  - d) None of these
- 6) In critically damped system, the damping factor of the system is \_\_\_\_\_.
  - a) Zero
  - b) Unity
  - c) Less than unity
  - d) greater than unity
- 7) The addition of zero in the transfer function causes \_\_\_\_\_.
  - a) Phase lead compensation
  - b) Phase lag compensation
  - c) Lag- lead compensation
  - d) None of these

- 8) The phase shift of the second order system with transfer function  $1/S^2$  is \_\_\_\_.
- a)  $180^{\circ}$                                       b)  $-180^{\circ}$   
c)  $0^{\circ}$                                             d)  $90^{\circ}$
- 9) Starting point of Root Locus are \_\_\_\_.
- a) open loop poles                                b) close loop poles  
c) open loop zeros                                d) close loop zeros
- 10) A feedback control system has  $G(s)H(s) = \frac{10}{s(s+2)}$ , the ramp error constant is \_\_\_\_.
- a) 10                                                      b) 2  
c) 5                                                        d) None
- 11) In an open loop control system \_\_\_\_.
- a) output is independent of control input  
b) output is dependent on control input  
c) only system parameters have effect on the control output  
d) None of the above
- 12) \_\_\_\_ has tendency to oscillate.
- a) Open loop                                              b) Closed loop  
c) Both a) and b)                                      d) Neither a) nor b)
- 13) Zero initial condition for a system means \_\_\_\_.
- a) Input reference signal is zero  
b) Zero stored energy  
c) No initial movement of moving parts  
d) System is at rest and no energy is stored in any of its components
- 14) The capacitance, in force-current analogy, is analogous to \_\_\_\_.
- a) Momentum                                              b) Velocity  
c) Displacement                                        d) Mass

 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) For Summing amplifier the ratio of  $R_f/r_1$  must be \_\_\_\_\_.
  - a) Zero
  - b) One
  - c) Infinite
  - d) Less than one
- 2) When square wave signal is input to the differentiator then output is \_\_\_\_\_.
  - a) Triangular
  - b) Spikes
  - c) Square wave
  - d) None
- 3) Gain bandwidth product of IC 741 is \_\_\_\_\_.
  - a) 10 MHz
  - b) 1 MHz
  - c) infinite
  - d) 1 KHz
- 4) Slew rate of the IC 741 is \_\_\_\_\_.
  - a) 0.5 V/ $\mu$ sec
  - b) 5 V/ $\mu$ sec
  - c) 150 V/ $\mu$ sec
  - d) None
- 5) Gain of opamp is decided by following circuit.
  - a) DIBO Amplifier
  - b) Current Mirror
  - c) Level Shifter
  - d) None
- 6) Which of the following is the example of comparator?
  - a) ZCD
  - b) Schmitt trigger
  - c) Window detector
  - d) All
- 7) Schmitt Trigger is also called as \_\_\_\_\_.
  - a) Square wave generator
  - b) Squaring circuit
  - c) Triangular generator
  - d) None
- 8) The gain for wein bridge oscillator at resonance is given by \_\_\_\_\_.
  - a) 4
  - b) 29
  - c) 3
  - d) 1.16
- 9) Which of the following is sinusoidal oscillator?
  - a) Wein bridge
  - b) Phase shift
  - c) Quadrature
  - d) All of above

- 10) The advantage of active filter is \_\_\_\_\_.  
a) Gain adjustment flexibility  
b) Frequency adjustment flexibility  
c) Both a) and b)  
d) None of these
- 11) Analog multipliers are available as \_\_\_\_\_.  
a) One quadrant  
b) Two quadrant  
c) Four quadrant  
d) All above
- 12) Using log amplifier we can perform  
a)  $\log_n(x)$   
b)  $\log_{10}(x)$   
c)  $\sinh(x)$   
d) all above
- 13) Butterworth filter is also known as \_\_\_\_\_ filter.  
a) Flat flat  
b) flat ripple  
c) ripple rippled  
d) none
- 14) Gain of opamp as buffer is \_\_\_\_\_.  
a) zero  
b) infinite  
c) unity  
d) less than one

Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full marks.

**Section – I**

- Q.2 Solve any four.** **16**
- Explain current mirror circuit.
  - What is virtual ground concept? How it is useful in simplifying circuit analysis?
  - Explain high frequency equivalent circuit of opamp.
  - Explain V-I convertor with floating load.
  - Define: CMRR, PSRR, Slew Rate,  $V_{io}$
- Q.3 Solve any two.** **12**
- Explain opamp as adder, averaging and scaling amplifier.
  - Explain block diagram of Opamp with parameters contributed by each block.
  - How opamp can be used as Integrator?

**Section – II**

- Q.4 Solve any four** **16**
- Explain ZCD in inverting and non inverting mode.
  - Explain square wave generator.
  - Explain advantages of active filters over passive filters.
  - Explain the Block diagram of PLL.
  - How diode can be used with opamp to act as half wave rectifier?
- Q.5 Solve any two.** **12**
- Design the first order Butterworth filter with  $F_L = 1$  KHz with gain 2.
  - Design the Wein bridge oscillator to generate frequency of 500 Hz.
  - Explain in detail IC 8038 & its working.

**S.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
LINEAR INTEGRATED CIRCUITS**

Day & Date: Tuesday, 26-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full marks.

**Section – I**

- Q.2 Solve any four.** **16**
- Explain current mirror circuit.
  - What is virtual ground concept? How it is useful in simplifying circuit analysis?
  - Explain high frequency equivalent circuit of opamp.
  - Explain V-I convertor with floating load.
  - Define: CMRR, PSRR, Slew Rate,  $V_{io}$
- Q.3 Solve any two.** **12**
- Explain opamp as adder, averaging and scaling amplifier.
  - Explain block diagram of Opamp with parameters contributed by each block.
  - How opamp can be used as Integrator?

**Section – II**

- Q.4 Solve any four** **16**
- Explain ZCD in inverting and non inverting mode.
  - Explain square wave generator.
  - Explain advantages of active filters over passive filters.
  - Explain the Block diagram of PLL.
  - How diode can be used with opamp to act as half wave rectifier?
- Q.5 Solve any two.** **12**
- Design the first order Butterworth filter with  $F_L = 1$  KHz with gain 2.
  - Design the Wein bridge oscillator to generate frequency of 500 Hz.
  - Explain in detail IC 8038 & its working.

|          |  |

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer Book.  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The advantage of active filter is \_\_\_\_\_.
  - a) Gain adjustment flexibility
  - b) Frequency adjustment flexibility
  - c) Both a) and b)
  - d) None of these
- 2) Analog multipliers are available as \_\_\_\_\_.
  - a) One quadrant
  - b) Two quadrant
  - c) Four quadrant
  - d) All above
- 3) Using log amplifier we can perform
  - a)  $\log_n(x)$
  - b)  $\log_{10}(x)$
  - c)  $\sinh(x)$
  - d) all above
- 4) Butterworth filter is also known as \_\_\_\_\_ filter.
  - a) Flat flat
  - b) flat ripple
  - c) ripple rippled
  - d) none
- 5) Gain of opamp as buffer is \_\_\_\_\_.
  - a) zero
  - b) infinite
  - c) unity
  - d) less than one
- 6) For Summing amplifier the ratio of  $R_f/r_1$  must be \_\_\_\_\_.
  - a) Zero
  - b) One
  - c) Infinite
  - d) Less than one
- 7) When square wave signal is input to the differentiator then output is \_\_\_\_\_.
  - a) Triangular
  - b) Spikes
  - c) Square wave
  - d) None
- 8) Gain bandwidth product of IC 741 is \_\_\_\_\_.
  - a) 10 MHz
  - b) 1 MHz
  - c) infinite
  - d) 1 KHz
- 9) Slew rate of the IC 741 is \_\_\_\_\_.
  - a) 0.5 V/ $\mu$ sec
  - b) 5 V/ $\mu$ sec
  - c) 150 V/ $\mu$ sec
  - d) None

**SIGNALS AND SYSTEMS**

Day & Date: Wednesday, 27-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives given below and rewrite the sentence. 14**

- 1) The discrete time signal  $x(n) = (-1)^n$  is periodic with fundamental period.
  - a) 6
  - b) 4
  - c) 2
  - d) 0
- 2) Periodic signals are \_\_\_\_\_.
  - a)  $x(t + T) = x(t)$
  - b)  $x(t - T) = x(t)$
  - c)  $x(n + mN) = x(n)$
  - d) All above
- 3) A useful property of the unit impulse  $\delta(t)$  is that \_\_\_\_\_.
  - a)  $\delta(at)$
  - b)  $\delta(at) = \delta(t)$
  - c)  $\delta(at) = \frac{1}{a} \delta(t)$
  - d)  $\delta(at) = [\delta(t)]^a$
- 4) If signal  $f(t)$  has energy,  $E$ , the energy of signal  $f(2t)$  is equal to \_\_\_\_\_.
  - a)  $E$
  - b)  $E/2$
  - c)  $2E$
  - d)  $4E$
- 5) A given system is characterized by the differential equation :  
 $\frac{d^2y(t)}{dt^2} - \frac{dy(t)}{dt} - 2y(t) = x(t)$  The system is.
  - a) Linear and unstable
  - b) Linear and stable
  - c) Nonlinear and unstable
  - d) Nonlinear and stable
- 6) The system characterized by the equation  $y(t) = ax(t) + b$ 
  - a) Linear for any value of  $b$
  - b) Linear if  $b > 0$
  - c) Linear if  $b < 0$
  - d) Non linear
- 7) If  $h(n) = [\delta(n - 1) - \delta(n)] * \delta(n - 1)$  then alternatively written as \_\_\_\_\_.
  - a)  $h(n) = [\delta(n) - \delta(n - 1)]$
  - b)  $h(n) = [\delta(n - 1) - \delta(n)]$
  - c)  $h(n) = [\delta(n + 1) - \delta(n - 1)]$
  - d) None
- 8) The frequency of a continuous time signal  $x(t)$  changes on transformation from  $x(t)$  to  $x(\alpha t)$ ,  $\alpha > 1$  by a factor \_\_\_\_\_.
  - a)  $\alpha$
  - b)  $1/\alpha$
  - c)  $\alpha^2$
  - d) None
- 9) Fourier spectrum (transform) of non-periodic signal will have \_\_\_\_\_.
  - a) Magnitude spectrum
  - b) Phase spectrum
  - c) Both a & b
  - d) Constant value
- 10) Inverse FT of 1 is \_\_\_\_\_.
  - a)  $u(t)$
  - b)  $\delta(t)$
  - c) 0
  - d) Infinite

- 11) Dirichlet conditions for periodic signals are in each period.
- a) function  $x(t)$  has only finite number of maxima & minima
  - b) function  $x(t)$  has finite number of discontinuities
  - c) function  $x(t)$  is absolutely integrable over one period
  - d) All of above
- 12) ROC of  $x(n)$  contains \_\_\_\_\_.
- a) Poles
  - b) Zeros
  - c) No poles
  - d) No zeros
- 13) ROC of ZT of unit step seq is \_\_\_\_\_.
- a)  $|Z| < 1$
  - b)  $|Z| > 1$
  - c) Real part of  $Z > 0$
  - d)  $|Z| = 0$
- 14) Inverse ZT of  $X(Z/a)$  \_\_\_\_\_.
- a)  $x(n/a)$
  - b)  $x(n)/a$
  - c)  $a^n x(n)$
  - d)  $ax(n)$

**S.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
SIGNALS AND SYSTEMS**

Day & Date: Wednesday, 27-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

**Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full marks.

**Section – I****Q.2 Attempt any four of the following questions. 12**

- a) Find even and odd components of the following signals.  
1)  $x(t) = 1 + t + 3t^2 + 5t^3 + 9t^4$   
2)  $x(t) = 1 + t \cos(t) + t^2 \sin(t) + t^3 \sin(t) \cos(t)$
- b) Explain operations performed on independent variables.
- c) Determine whether the following signal is periodic or non-periodic. If periodic find its fundamental period.  
1)  $\sin^3(2t)$
- d) Explain properties of LTI Systems.
- e) Draw Direct form-I and Direct form-II implementation for the following LTI system.

$$\frac{d}{dt}y(t) + 10y(t) = 2x(t)$$

**Q.3 Attempt any Two of the following questions. 16**

- a) Verify the general property of system for the following system.  
 $\frac{d}{dt}y(t) + ty(t) = x(t)$
- b) 1) Find the step response of the following system  $h(t) = t u(t)$ . Justify also whether LTI system is stable or not stable.  
2) State and prove the properties of convolution integral.
- c) Perform the convolution operation of two function in time domain.  
 $h(t) = e^{-2t} u(t)$  and  $x(t) = e^{-t} u(t)$

**Section – II****Q.4 Attempt any four of the following questions. 12**

- a) State & explain sampling theorem.
- b) Explain modulation property of FT.
- c) Find ZT & sketch ROC  
 $x(n) = (0.6)^n u(n) + (0.4)^n u(n)$
- d) Find ZT of  $x(n) = u(n+1)u(n)$
- e) Find inverse ZT of  $X(Z) = \frac{z}{2z^2 - 3z + 1}$  & ROC is  $|Z| > 1$

**Q.5 Attempt any Two of the following questions. 16**

- a) Consider analog signal  $x(t) = 3 \cos 2000\pi t + 5 \sin 6000\pi t + 10 \cos 1000\pi t$ .  
i) What is sampling rate?  
ii) For this signal assuming that signal is sampled using  $f_s = 5000\text{Hz}$ .  
What is DT signal?
- b) Determine FT of  $x(t) = e^{-a|t|}$  & plot magnitude spectrum.
- c) Find ZT of  $x(n) = n^2 u(n)$

 c) Nonlinear and unstable                d) Nonlinear and stable
- 11) The system characterized by the equation  $y(t) = ax(t) + b$
- a) Linear for any value of b              b) Linear if  $b > 0$   
 c) Linear if  $b < 0$                           d) Non linear
- 12) If  $h(n) = [\delta(n - 1) - \delta(n)] * \delta(n - 1)$  then alternatively written as \_\_\_\_\_.
- a)  $h(n) = [\delta(n) - \delta(n - 1)]$               b)  $h(n) = [\delta(n - 1) - \delta(n)]$   
 c)  $h(n) = [\delta(n + 1) - \delta(n - 1)]$         d) None
- 13) The frequency of a continuous time signal  $x(t)$  changes on transformation from  $x(t)$  to  $x(\alpha t)$ ,  $\alpha > 1$  by a factor \_\_\_\_\_.
- a)  $\alpha$                                               b)  $1/\alpha$   
 c)  $\alpha^2$                                             d) None
- 14) Fourier spectrum (transform) of non-periodic signal will have \_\_\_\_\_.
- a) Magnitude spectrum                      b) Phase spectrum  
 c) Both a & b                                    d) Constant value

**S.E. (Part – II) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**SIGNALS AND SYSTEMS**

Day & Date: Wednesday, 27-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.

**Section – I**

**Q.2 Attempt any four of the following questions. 12**

- a) Find even and odd components of the following signals.  
 1)  $x(t) = 1 + t + 3t^2 + 5t^3 + 9t^4$   
 2)  $x(t) = 1 + t \cos(t) + t^2 \sin(t) + t^3 \sin(t) \cos(t)$   
 b) Explain operations performed on independent variables.  
 c) Determine whether the following signal is periodic or non-periodic. If periodic find its fundamental period.  
 1)  $\sin^3(2t)$   
 d) Explain properties of LTI Systems.  
 e) Draw Direct form-I and Direct form-II implementation for the following LTI system.

$$\frac{d}{dt}y(t) + 10y(t) = 2x(t)$$

**Q.3 Attempt any Two of the following questions. 16**

- a) Verify the general property of system for the following system.  
 $\frac{d}{dt}y(t) + ty(t) = x(t)$   
 b) 1) Find the step response of the following system  $h(t) = t u(t)$ . Justify also whether LTI system is stable or not stable.  
 2) State and prove the properties of convolution integral.  
 c) Perform the convolution operation of two function in time domain.  
 $h(t) = e^{-2t} u(t)$  and  $x(t) = e^{-t} u(t)$

**Section – II**

**Q.4 Attempt any four of the following questions. 12**

- a) State & explain sampling theorem.  
 b) Explain modulation property of FT.  
 c) Find ZT & sketch ROC  
 $x(n) = (0.6)^n u(n) + (0.4)^n u(n)$   
 d) Find ZT of  $x(n) = u(n+1)u(n)$   
 e) Find inverse ZT of  $X(Z) = \frac{z}{2z^2 - 3z + 1}$  & ROC is  $|Z| > 1$

**Q.5 Attempt any Two of the following questions. 16**

- a) Consider analog signal  $x(t) = 3 \cos 2000\pi t + 5 \sin 6000\pi t + 10 \cos 1000\pi t$ .  
 i) What is sampling rate?  
 ii) For this signal assuming that signal is sampled using  $f_s = 5000\text{Hz}$ . What is DT signal?  
 b) Determine FT of  $x(t) = e^{-a|t|}$  & plot magnitude spectrum.  
 c) Find ZT of  $x(n) = n^2 u(n)$

- 8) Directivity is \_\_\_\_\_.
- a) Inversely proportional to beamwidth
  - b) Inversely proportional to square of beamwidth
  - c) directly proportional to beamwidth
  - d) directly proportional to square of beamwidth
- 9) The unit of permeability is \_\_\_\_\_.
- a) Henry/m
  - b) Farad/ m
  - c) Henry
  - d) Webber
- 10) The length of mobile antenna is \_\_\_\_\_.
- a)  $\lambda$
  - b)  $\lambda/2$
  - c)  $\lambda/4$
  - d)  $> \lambda$
- 11) For plane waves, the angle between electric and magnetic field is \_\_\_\_\_.
- a)  $90^\circ$
  - b)  $180^\circ$
  - c)  $0^\circ$
  - d)  $720^\circ$
- 12) Unit of magnetic flux density is \_\_\_\_\_.
- a) V/m
  - b) m/ V
  - c) C/m<sup>2</sup>
  - d) Tesla
- 13) The wavelength of a 10GHz plane wave is \_\_\_\_\_.
- a) 300m
  - b) 300mm
  - c) 3mm
  - d) 30mm
- 14) The ration of the magnitude of electric & magnetic fields is termed as \_\_\_\_\_.
- a) resistance
  - b) Admittance
  - c) conductance
  - d) Impedance

Seat  
No.

**T.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ELECTRO MAGNETIC ENGINEERING & RADIATING SYSTEM**

Day & Date: Friday, 06-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figure to the right indicates full marks.  
 3) Assume suitable data wherever necessary.

**Section – I**

**Q.2 Solve Any Three.** **12**

- a) State and prove Gauss Theorem?
- b) Determine the work done to carry  $-2\mu\text{C}$  charge from P1 (2, 1, -1) to P2 (8, 2, -1) in the field  $E = y a_x + x a_y$  along path  $x = 2y^2$ .
- c) Given the potential  $V = \frac{10}{r^2} \sin \theta \cos \phi$  find D at (2,  $\pi/2$ , 0).
- d) Let  $a = 120 \text{ cm}^2$ ,  $d = 5 \text{ mm}$  and  $\epsilon_r = 12$  for parallel plate capacitor.
  - 1) Calculate the capacitance.
  - 2) If  $V_0 = 40 \text{ V}$  find E & stored energy.
- e) Explain coulombs law and its vector form?

**Q.3 Solve Any Two** **16**

- a) Find the work done in moving a point charge  $Q = 5 \mu\text{C}$  from (0,0,0) to (2,  $\pi/4$ ,  $\pi/2$ ) in the field.  $E = 5e^{-r/4} a_r + \frac{10}{r \sin \theta} a_\phi \text{ v/m}$ .
- b) Derive expression on electric field due to infinite sheet charge?
- c) State & Prove Divergence theorem?  
 $D = yxz a_x - y^2 a_y + yz a_z$ . Evaluate Divergence Theorem of both side of unit cube  $0 \leq x, y, z \leq 1$ .

**Section – II**

**Q.4 Solve any four** **16**

- a) What do you mean by field zones of antenna? Elaborate the concept with neat sketch.
- b) Find the contribution to the magnetic flux density at point P caused by Semicircle section, two horizontal sections and one vertical section of the conductors.  $I = 6\text{A}$ .

- c) Derive Helmholtz wave equations for electromagnetic waves.
- d) Verify whether if the wave in free space specified below satisfy Maxwell equations or not.  
$$E = 2 \sin x \cdot \sin t \cdot a_y$$
$$H = (2/\mu) \cos x \cdot \cos t \cdot a_z$$
- e) What is Radiation resistance of antenna? Explain any five properties of antenna.

**Q.5 Attempt any two****12**

- a) Explain with suitable derivation, the Maxwell's equations in Time varying fields.
- b) Derive Pointing Theorem and give its physical interpretation.
- c) Differentiate Yagi array, broad side array and end fire array with their properties.

 2) Assume suitable data if necessary.  
 3) Figure must be draw wherever necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Directivity is \_\_\_\_\_.  
 a) Inversely proportional to beamwidth  
 b) Inversely proportional to square of beamwidth  
 c) directly proportional to beamwidth  
 d) directly proportional to square of beamwidth
- 2) The unit of permeability is \_\_\_\_\_.  
 a) Henry/m  
 b) Farad/ m  
 c) Henry  
 d) Webber
- 3) The length of mobile antenna is \_\_\_\_\_.  
 a)  $\lambda$   
 b)  $\lambda/2$   
 c)  $\lambda/4$   
 d)  $> \lambda$
- 4) For plane waves, the angle between electric and magnetic field is \_\_\_\_\_.  
 a)  $90^\circ$   
 b)  $180^\circ$   
 c)  $0^\circ$   
 d)  $720^\circ$
- 5) Unit of magnetic flux density is \_\_\_\_\_.  
 a) V/m  
 b) m/ V  
 c) C/m<sup>2</sup>  
 d) Tesla
- 6) The wavelength of a 10GHz plane wave is \_\_\_\_\_.  
 a) 300m  
 b) 300mm  
 c) 3mm  
 d) 30mm
- 7) The ration of the magnitude of electric & magnetic fields is termed as \_\_\_\_\_.  
 a) resistance  
 b) Admittance  
 c) conductance  
 d) Impedance
- 8) A field line and an equipotential surface are \_\_\_\_\_.  
 a) always parallel  
 b) always at  $90^\circ$   
 c) inclined at any angle  
 d) none of the above
- 9) Which of the following is true for electrostatics?  
 a)  $E = -\nabla V$   
 b)  $\nabla^2 V = 0$   
 c) Both (a) and (b)  
 d) None of these
- 10) Potential energy of a test charge, when moved from a lower potential point to a higher potential point \_\_\_\_\_.  
 a) Remains the same  
 b) Increases  
 c) Decreases  
 d) Becomes zero

- 11) As per Gauss's Law, the total electric flux  $\Psi$  through a closed surface and the total charge  $Q_{en}$  that surface are related as \_\_\_\_\_.
- a)  $\oint D \cdot ds = Q$                       b)  $\Psi = Q_{en}$
- c) Both a & b                                      d)  $\oint D \cdot ds = 0$
- 12) The capacitance of isolated capacitor is \_\_\_\_\_.
- a)  $4\pi\epsilon_0\epsilon_r a$                                       b)  $\frac{4\pi\epsilon}{\frac{1}{a} - \frac{1}{b}}$
- c)  $4\pi\epsilon_0\epsilon_r(a - b)$                               d) None of these
- 13)  $dv = r^2 \sin \theta \, dr d\Phi dz$  is the different volume in \_\_\_\_\_.
- a) Cylindrical co-ordinate system    b) Spherical co-ordinate system
- c) Cartesian co-ordinate system    d) None of the above
- 14) Statement 1: Potential is the gradient of electric field intensity.  
Statement 2: Electric field intensity is opposite to the direction in which V is increases.  
Statement 1 & Statement 2 are respectively.
- a) True, False                                      b) True, True
- c) False, True                                      d) False, False

Seat  
No.

  - d) Becomes zero
- 9) As per Gauss's Law, the total electric flux  $\Psi$  through a closed surface and the total charge  $Q_{en}$  that surface are related as \_\_\_\_\_.
  - a)  $\oint D \cdot ds = Q$
  - b)  $\Psi = Q_{en}$
  - c) Both a & b
  - d)  $\oint D \cdot ds = 0$

- 10) The capacitance of isolated capacitor is \_\_\_\_\_.
- a)  $4\pi\varepsilon_0\varepsilon_r a$                                       b)  $\frac{4\pi\varepsilon}{\frac{1}{a} - \frac{1}{b}}$
- c)  $4\pi\varepsilon_0\varepsilon_r(a - b)$                                       d) None of these
- 11)  $dv = r^2 \sin \theta \, dr d\Phi dz$  is the different volume in \_\_\_\_\_.
- a) Cylindrical co-ordinate system    b) Spherical co-ordinate system
- c) Cartesian co-ordinate system    d) None of the above
- 12) Statement 1: Potential is the gradient of electric field intensity.  
Statement 2: Electric field intensity is opposite to the direction in which V is increases.  
Statement 1 & Statement 2 are respectively.
- a) True, False                                      b) True, True
- c) False, True                                      d) False, False
- 13) Directivity is \_\_\_\_\_.
- a) Inversely proportional to beamwidth
- b) Inversely proportional to square of beamwidth
- c) directly proportional to beamwidth
- d) directly proportional to square of beamwidth
- 14) The unit of permeability is \_\_\_\_\_.
- a) Henry/m                                      b) Farad/ m
- c) Henry                                      d) Webber

**T.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**ELECTRO MAGNETIC ENGINEERING & RADIATING SYSTEM**

Day & Date: Friday, 06-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figure to the right indicates full marks.  
 3) Assume suitable data wherever necessary.

**Section – I****Q.2 Solve Any Three.** **12**

- a) State and prove Gauss Theorem?
- b) Determine the work done to carry  $-2\mu\text{C}$  charge from P1 (2, 1, -1) to P2 (8, 2, -1) in the field  
 $E = y a_x + x a_y$  along path  $x = 2y^2$ .
- c) Given the potential  $V = \frac{10}{r^2} \sin \theta \cos \phi$  find D at (2,  $\pi/2$ , 0).
- d) Let  $a = 120 \text{ cm}^2$ ,  $d = 5 \text{ mm}$  and  $\epsilon_r = 12$  for parallel plate capacitor.
  - 1) Calculate the capacitance.
  - 2) If  $V_0 = 40 \text{ V}$  find E & stored energy.
- e) Explain coulombs law and its vector form?

**Q.3 Solve Any Two** **16**

- a) Find the work done in moving a point charge  
 $Q = 5 \mu\text{C}$  from (0,0,0) to (2,  $\pi/4$ ,  $\pi/2$ ) in the field.  
 $E = 5e^{-r/4} a_r + \frac{10}{r \sin \theta} a_\phi \text{ v/m.}$
- b) Derive expression on electric field due to infinite sheet charge?
- c) State & Prove Divergence theorem?  
 $D = yxz a_x - y^2 a_y + yz a_z$ . Evaluate Divergence Theorem of both side of unit cube  $0 \leq x, y, z \leq 1$ .

**Section – II****Q.4 Solve any four** **16**

- a) What do you mean by field zones of antenna? Elaborate the concept with neat sketch.
- b) Find the contribution to the magnetic flux density at point P caused by Semicircle section, two horizontal sections and one vertical section of the conductors.  $I = 6\text{A}$ .

- c) Derive Helmholtz wave equations for electromagnetic waves.
- d) Verify whether if the wave in free space specified below satisfy Maxwell equations or not.  
$$E = 2 \sin x \cdot \sin t \cdot a_y$$
$$H = (2/\mu) \cos x \cdot \cos t \cdot a_z$$
- e) What is Radiation resistance of antenna? Explain any five properties of antenna.

**Q.5 Attempt any two****12**

- a) Explain with suitable derivation, the Maxwell's equations in Time varying fields.
- b) Derive Pointing Theorem and give its physical interpretation.
- c) Differentiate Yagi array, broad side array and end fire array with their properties.

**T.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
PRINCIPLES OF DIGITAL COMMUNICATION**

Day & Date: Monday, 09-12-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

**Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) The capacity of communication channel with bandwidth of 5MHz and 15SNR is approximately \_\_\_\_\_.  
a) 10Mbps                                      b) 20Mbps  
c) 75Mbps                                      d) 150Mbps
- 2) A source delivers symbols  $m_1, m_2, m_3, m_4$  with probabilities  $1/4, 1/4, 1/4, 1/4$  respectively. The entropy of the system is \_\_\_\_\_.  
a) 2 bits/sec                                      b) 2 bits/symbols  
c) 2 symbols                                      d) 2 symbol/bit
- 3) The bandwidth requirement of Pulse Width Modulation is higher than that of Pulse amplitude modulation \_\_\_\_\_.  
a) True                                              b) False
- 4) In a pulse code modulation (PCM) the information is transmitted in the form of \_\_\_\_\_.  
a) variation in the amplitude of pulses  
b) variation in the width of pulses  
c) variation in the position of pulses  
d) code word each of N bit length
- 5) The non uniform quantization leads to \_\_\_\_\_.  
a) reduction in transmission bandwidth  
b) increase in maximum SNR  
c) increase in SNR for low level signals  
d) simplification of quantization process
- 6) In \_\_\_\_\_ encoding, we use three levels: positive, zero and negative.  
a) unipolar                                              b) Bipolar  
c) polar                                              d) none of the above
- 7) The process of correcting channel induced distortion is called \_\_\_\_\_.  
a) ISI                                              b) matched filter  
c) correlation receiver                                      d) Equalization
- 8) In MSK, the difference between the higher and lower frequency is \_\_\_\_\_.  
a) Same as the bit rate                                      b) Half of the bit rate  
c) Twice of the bit rate                                      d) Four time the bit rate

- 9) In multichannel digital communication in AWGN channels are fixed but vary in \_\_\_\_\_.
- a) magnitude and phase
  - b) magnitude and frequency
  - c) frequency and phase
  - d) none
- 10) The correlation receiver consist of \_\_\_\_\_.
- a) a multiplier and integrator
  - b) an adder and an integrator
  - c) a multiplier and a differentiation
  - d) an adder and a differentiator
- 11) QPSK is a modulation scheme where each symbol consists of \_\_\_\_\_.
- a) 4 bits
  - b) 2 bits
  - c) 1 bits
  - d) M number of bits, depending upon the requirement
- 12) In Binary FSK, mark and space respectively represent.
- a) 1 and 0
  - b) 0 and 1
  - c) 11 and 00
  - d) 00 and 11
- 13) Minimum shift keying is similar to \_\_\_\_\_.
- a) Continuous phase frequency shift keying
  - b) Binary phase shift keying
  - c) Binary frequency shift keying
  - d) QPSK
- 14) Advantages of digital communication are \_\_\_\_\_.
- a) Easy multiplexing
  - b) Easy processing
  - c) Reliable
  - d) All of the mentioned

Electronics & Telecommunication Engineering  
PRINCIPLES OF DIGITAL COMMUNICATION**

Day & Date: Monday, 09-12-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
2) Figure to the right indicates full marks.

**Section - I**

**Q.2 Solve any four of the questions. 16**

- With the help of block diagram explain the working of Delta Modulation. What are its drawbacks?
- With the waveforms explain how PPM is derived from PAM.
- Write a note on intersymbol interference.
- An analog signal bandlimited to 10KHz is quantized in 8 levels of PCM system with probabilities of  $\frac{1}{4}$ ,  $\frac{1}{5}$ ,  $\frac{1}{5}$ ,  $\frac{1}{10}$ ,  $\frac{1}{10}$ ,  $\frac{1}{20}$ ,  $\frac{1}{20}$  and  $\frac{1}{20}$  respectively. Find the entropy and the rate of information.
- Explain working of adaptive Equalizer.

**Q.3 Solve any two of the following. 12**

- Apply Huffman Coding Procedure for following message ensemble. Also calculate average length of code and its efficiency. Assume  $M=4$ .

$$[X]=[x_1 \quad x_2 \quad x_3 \quad x_4 \quad x_5 \quad x_6 \quad x_7 \quad x_8]$$

$$[P]=[0.2 \quad 0.2 \quad 0.15 \quad 0.15 \quad 0.1 \quad 0.1 \quad 0.05 \quad 0.05]$$

- Explain any one method of symbol synchronization in detail.
- With the block diagram explain PCM-TDM Telephone system.

**Section - II**

**Q.4 Solve any four of the followings. 16**

- With block diagram explain non-coherent FSK.
- List out advantages of multicarrier communication system
- Explain Differential coherent PSK.
- Write a note on wideband FSK in short.
- Write a note on M-ary orthogonal signals.

**Q.5 Solve any two of the following. 12**

- Write a note on QAM in detail.
- Explain multichannel digital communication in AWGN channels.
- Explain the matched filter receiver in detail.

Find the entropy and the rate of information.
- e) Explain working of adaptive Equalizer.

**Q.3 Solve any two of the following. 12**

- a) Apply Huffman Coding Procedure for following message ensemble. Also calculate average length of code and its efficiency. Assume  $M=4$ .

$$\begin{aligned} [X] &= [x_1 \quad x_2 \quad x_3 \quad x_4 \quad x_5 \quad x_6 \quad x_7 \quad x_8] \\ [P] &= [0.2 \quad 0.2 \quad 0.15 \quad 0.15 \quad 0.1 \quad 0.1 \quad 0.05 \quad 0.05] \end{aligned}$$

- b) Explain any one method of symbol synchronization in detail.
- c) With the block diagram explain PCM-TDM Telephone system.

**Section - II**

**Q.4 Solve any four of the followings. 16**

- a) With block diagram explain non-coherent FSK.
- b) List out advantages of multicarrier communication system
- c) Explain Differential coherent PSK.
- d) Write a note on wideband FSK in short.
- e) Write a note on M-ary orthogonal signals.

**Q.5 Solve any two of the following. 12**

- a) Write a note on QAM in detail.
- b) Explain multichannel digital communication in AWGN channels.
- c) Explain the matched filter receiver in detail.

**T.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**SOFTWARE ENGINEERING & PROJECT MANAGEMENT SYSTEM**

Day & Date: Wednesday, 11-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicates full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Cascade Arrangement is Present in \_\_\_\_\_.  
 a) Evolutionary Development      b) Incremental Delivery  
 c) Waterfall Model                  d) None
- 2) Functional Requirements considers \_\_\_\_\_.  
 a) Output                                  b) Input  
 c) Security                                d) Input & output
- 3) System testing involves \_\_\_\_\_.  
 a) Integration testing                  b) Release testing  
 c) Interface testing                    d) Both a and b
- 4) Behavioral Model is called as \_\_\_\_\_.  
 a) Object Model                        b) Dataflow model  
 c) Context Model                        d) V Model
- 5) RUP having four phases in a sequence as \_\_\_\_\_.  
 a) Inception- Collaboration-Transition – Revision.  
 b) Inception- Elaboration -Construction-Transition.  
 c) Elaboration-Inception-Construction-Transition.  
 d) Transition-Inception- Elaboration -Construction
- 6) Dataflow Model & state machine model are types of \_\_\_\_\_.  
 a) Context Model                        b) Behavioral Model  
 c) Data Model                            d) All
- 7) Partition testing is part of \_\_\_\_\_.  
 a) Release testing                        b) Component testing  
 c) System testing                        d) Performance testing
- 8) Test automation helps to \_\_\_\_\_.  
 a) Reduce the cost of testing          b) Increase the cost of testing  
 c) Reduce time of testing              d) Increase time of testing
- 9) CBSE Approach is based on \_\_\_\_\_.  
 a) Existence of reusable components  
 b) Existence of new components  
 c) Nonexistence of components  
 d) None of above

- 10) Software Specification is process of \_\_\_\_\_.  
a) Understanding & defining service required  
b) Identifying the constraints on system  
c) Both a & b  
d) Identifying document
- 11) Scheduling can best be defined as the process used to determine \_\_\_\_\_.  
a) overall project duration                      b) project cost estimating  
c) the project management plan              d) sub-contractor's responsibilities
- 12) Risk is \_\_\_\_\_.  
a) Event which may arrive in future  
b) Negative effect causing events  
c) Problems arriving in project  
d) All are correct
- 13) The basic resource of the organization is \_\_\_\_\_.  
a) Money                                              b) Machines  
c) Manpower                                        d) All of them
- 14) Framework of risk contains the categories as \_\_\_\_\_.  
a) Actors                                              b) Task  
c) Structure and technology                    d) All

Day & Date: Friday, 13-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No.1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) A Discrete Time signal has \_\_\_\_\_.
  - a) Continuous time continuous amplitude
  - b) Continuous time discrete amplitude
  - c) Discrete time continuous amplitude
  - d) Discrete time discrete amplitude
- 2) Circular convolution of the sequences  $x(n)=\{1,2,1\}$  and  $h(n)=\{1,-2,2\}$  is \_\_\_\_\_.
  - a)  $\{1,2,1\}$
  - b)  $\{3,2,1\}$
  - c)  $\{3,2,-1\}$
  - d)  $\{3,2,2\}$
- 3) Multiplication are required to compute N point DFT \_\_\_\_\_.
  - a) N
  - b)  $N(N-1)$
  - c)  $N^2$
  - d)  $N^3$
- 4) The magnitude response for DFT exhibits complex conjugate property if time sequence is \_\_\_\_\_.
  - a) a real sequence
  - b) a complex sequence
  - c) an imaginary sequence
  - d) not a real sequence
- 5) Decimation in time FFT decimates \_\_\_\_\_.
  - a) DFT coefficients
  - b) Input sequence
  - c) Both sequence and DFT
  - d) None
- 6) Circular convolution can be performed using the methods \_\_\_\_\_.
  - a) Concentric Circle
  - b) Matrix Multiplication
  - c) Both a & b
  - d) None of above
- 7) In DIT, the data  $x(n)$  is stored in \_\_\_\_\_ order.
  - a) Reversed order
  - b) Bit reversal
  - c) Non-shuffled
  - d) None
- 8) Convolution of Ideal filter response and sinc function results in.
  - a) Side Lobe oscillations
  - b) Main Lobe oscillations
  - c) Sharpening of a transition width
  - d) Decrease in main lobe

- 9) Unwrapped phase response of FIR filter in pass band is \_\_\_\_\_.  
a) Exponentially increasing      b) Exponentially decreasing  
c) Non-linear      d) linear
- 10) When analog butter worth filter is converted to DT filter using Impulse Invariance method, then \_\_\_\_\_.  
a) Aliasing can be eliminated  
b) Aliasing is always present  
c) Aliasing can be reduced by reducing T  
d) Aliasing cannot be reduced by reducing T
- 11) The binary signed number 0.11010111 when rounded to seven bits will result in number given by \_\_\_\_\_.  
a) 0.1101011      b) 0.1101010  
c) 0.1101100      d) 0.1101110
- 12) Properties of butter worth low pass filter is given by \_\_\_\_\_.  
a) The poles of butter worth filter lies on a circle  
b) The poles of butter worth filter lies outside the a circle  
c) The poles of butter worth filter lies inside the a circle  
d) Not a real sequence
- 13) The mapping for Impulse Invariance Method is \_\_\_\_\_.  
a) many to many mapping      b) many to one mapping  
c) one to one mapping      d) none of above
- 14) Impulse invariant method will convert analog filter to DT filter that has \_\_\_\_\_.  
a) Same frequency response as that of analog filter and is stable  
b) Different frequency response and is unstable  
c) Same frequency response and is unstable  
d) Different frequency response and is stable

Seat  
No.

**T.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**DIGITAL SIGNAL PROCESSING**

Day & Date: Friday, 13-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figure to the right indicates full marks.  
 3) Assume necessary data if necessary.

**Section – I****Q.2 Attempt any three.** **12**

- a) Determine the cross correlation sequence of sequences.  
 $X(n) = \{1, 2, 3, 4, 5\}$ ,  $y(n) = \{5, 6, 7, 8, 9\}$
- b) Find the circular convolution of given data sequences.  
 $X_1(n) = \{1, 1, -1, -1\}$ ,  $x_2(n) = \{1, 0, -1, 0, -1\}$
- c) Explain the periodicity property of DFT.  
 d) Derive the equation for Circular convolution.  
 e) Explain Chirp 'Z' transform in short.

**Q.3 Attempt any two.** **16**

- a) Determine the output of a linear FIR filter whose impulse response  $h(n) = \{1, 2, 3\}$  and the input signal  $x(n) = \{1, 2, 3, 4, 5, 6, 7, 8, 9\}$  using overlap save method, verify by linear convolution.
- b) Determine the DFT of the given data sequence  
 $X(n) = \{-1, 2, -3, 4, 9, -20, 12, 6\}$   
 By Decimation in time FFT Algorithm.
- c) Given  $x(n) = 2^n$  and  $N=8$ , find  $X(k)$  using DIF FFT algorithm.

**Section – II****Q.4 Solve Any Three.** **12**

- a) Explain in detail Fourier Series Design Method.  
 b) Realize the system with difference equation in Cascade Form.  

$$y(n) = \frac{3}{4}y(n-1) - \frac{1}{8}y(n-2) + x(n) + \frac{1}{3}x(n-1)$$
  
 c) Explain the finite word length effect in FIR Filter.  
 d) What is warping effect? What is its effect on magnitude and phase response?  
 e) Explain the application of DSP in Telecommunication.

**Q.5 Solve any two.** **16**

- a) Design a ideal high pass filter with a frequency response using hanning window.  

$$Hd(e^{j\omega}) = 1 \quad \text{for } \frac{\pi}{4} \leq |\omega| \leq \pi$$

$$= 0 \quad \text{for } |\omega| \leq \frac{\pi}{4}$$
  
 Find the values of  $h(n)$  for  $N=11$  and Find  $H(Z)$ .
- b) Apply impulse invariant method and find  $H(z)$  for  $H(s) = \frac{s+a}{(s+a)^2+b^2}$
- c) A digital filter with a 3dB bandwidth of  $0.25\pi$  is to be designed from the analog filter whose system response is  $H(s) = \frac{\Omega_c}{s+\Omega_c}$  Use Bilinear transformation and obtain  $H(z)$ .

Seat  
No.

**T.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**DIGITAL SIGNAL PROCESSING**

Day &amp; Date: Friday, 13-12-2019

Max. Marks: 70

Time: 02:30 PM To 05:30 PM

- Instructions:** 1) Q. No.1 is compulsory and should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Convolution of Ideal filter response and sinc function results in.
  - a) Side Lobe oscillations
  - b) Main Lobe oscillations
  - c) Sharpening of a transition width
  - d) Decrease in main lobe
- 2) Unwrapped phase response of FIR filter in pass band is \_\_\_\_\_.
  - a) Exponentially increasing
  - b) Exponentially decreasing
  - c) Non- linear
  - d) linear
- 3) When analog butter worth filter is converted to DT filter using Impulse Invariance method, then \_\_\_\_\_.
  - a) Aliasing can be eliminated
  - b) Aliasing is always present
  - c) Aliasing can be reduced by reducing T
  - d) Aliasing cannot be reduced by reducing T
- 4) The binary signed number 0.11010111 when rounded to seven bits will result in number given by \_\_\_\_\_.
  - a) 0.1101011
  - b) 0.1101010
  - c) 0.1101100
  - d) 0.1101110
- 5) Properties of butter worth low pass filter is given by \_\_\_\_\_.
  - a) The poles of butter worth filter lies on a circle
  - b) The poles of butter worth filter lies outside the a circle
  - c) The poles of butter worth filter lies inside the a circle
  - d) Not a real sequence
- 6) The mapping for Impulse Invariance Method is \_\_\_\_\_.
  - a) many to many mapping
  - b) many to one mapping
  - c) one to one mapping
  - d) none of above
- 7) Impulse invariant method will convert analog filter to DT filter that has \_\_\_\_\_.
  - a) Same frequency response as that of analog filter and is stable
  - b) Different frequency response and is unstable
  - c) Same frequency response and is unstable
  - d) Different frequency response and is stable

- 8) A Discrete Time signal has \_\_\_\_\_.
- a) Continuous time continuous amplitude
  - b) Continuous time discrete amplitude
  - c) Discrete time continuous amplitude
  - d) Discrete time discrete amplitude
- 9) Circular convolution of the sequences  $x(n)=\{1,2,1\}$  and  $h(n)=\{1,-2,2\}$  is \_\_\_\_\_.
- a)  $\{1,2,1\}$
  - b)  $\{3,2,1\}$
  - c)  $\{3,2,-1\}$
  - d)  $\{3,2,2\}$
- 10) Multiplication are required to compute N point DFT \_\_\_\_\_.
- a) N
  - b)  $N(N-1)$
  - c)  $N^2$
  - d)  $N^3$
- 11) The magnitude response for DFT exhibits complex conjugate property if time sequence is \_\_\_\_\_.
- a) a real sequence
  - b) a complex sequence
  - c) an imaginary sequence
  - d) not a real sequence
- 12) Decimation in time FFT decimates \_\_\_\_\_.
- a) DFT coefficients
  - b) Input sequence
  - c) Both sequence and DFT
  - d) None
- 13) Circular convolution can be performed using the methods \_\_\_\_\_.
- a) Concentric Circle
  - b) Matrix Multiplication
  - c) Both a & b
  - d) None of above
- 14) In DIT, the data  $x(n)$  is stored in \_\_\_\_\_ order.
- a) Reversed order
  - b) Bit reversal
  - c) Non-shuffled
  - d) None

Seat  
No.

**T.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**DIGITAL SIGNAL PROCESSING**

Day & Date: Friday, 13-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figure to the right indicates full marks.  
 3) Assume necessary data if necessary.

**Section – I****Q.2 Attempt any three.** **12**

- a) Determine the cross correlation sequence of sequences.  
 $X(n) = \{1, 2, 3, 4, 5\}$ ,  $y(n) = \{5, 6, 7, 8, 9\}$
- b) Find the circular convolution of given data sequences.  
 $X_1(n) = \{1, 1, -1, -1\}$ ,  $x_2(n) = \{1, 0, -1, 0, -1\}$
- c) Explain the periodicity property of DFT.  
 d) Derive the equation for Circular convolution.  
 e) Explain Chirp 'Z' transform in short.

**Q.3 Attempt any two.** **16**

- a) Determine the output of a linear FIR filter whose impulse response  $h(n) = \{1, 2, 3\}$  and the input signal  $x(n) = \{1, 2, 3, 4, 5, 6, 7, 8, 9\}$  using overlap save method, verify by linear convolution.
- b) Determine the DFT of the given data sequence  
 $X(n) = \{-1, 2, -3, 4, 9, -20, 12, 6\}$   
 By Decimation in time FFT Algorithm.
- c) Given  $x(n) = 2^n$  and  $N = 8$ , find  $X(k)$  using DIF FFT algorithm.

**Section – II****Q.4 Solve Any Three.** **12**

- a) Explain in detail Fourier Series Design Method.  
 b) Realize the system with difference equation in Cascade Form.  

$$y(n) = \frac{3}{4}y(n-1) - \frac{1}{8}y(n-2) + x(n) + \frac{1}{3}x(n-1)$$
  
 c) Explain the finite word length effect in FIR Filter.  
 d) What is warping effect? What is its effect on magnitude and phase response?  
 e) Explain the application of DSP in Telecommunication.

**Q.5 Solve any two.** **16**

- a) Design a ideal high pass filter with a frequency response using hanning window.  

$$Hd(e^{j\omega}) = 1 \quad \text{for } \frac{\pi}{4} \leq |\omega| \leq \pi$$

$$= 0 \quad \text{for } |\omega| \leq \frac{\pi}{4}$$
  
 Find the values of  $h(n)$  for  $N = 11$  and Find  $H(Z)$ .
- b) Apply impulse invariant method and find  $H(z)$  for  $H(s) = \frac{s+a}{(s+a)^2 + b^2}$
- c) A digital filter with a 3dB bandwidth of  $0.25\pi$  is to be designed from the analog filter whose system response is  $H(s) = \frac{\Omega_c}{s + \Omega_c}$  Use Bilinear transformation and obtain  $H(z)$ .

 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 14**

- 1) Decimation in time FFT decimates \_\_\_\_\_.  
 a) DFT coefficients                      b) Input sequence  
 c) Both sequence and DFT              d) None
- 2) Circular convolution can be performed using the methods \_\_\_\_\_.  
 a) Concentric Circle                      b) Matrix Multiplication  
 c) Both a & b                                d) None of above
- 3) In DIT, the data  $x(n)$  is stored in \_\_\_\_\_ order.  
 a) Reversed order                        b) Bit reversal  
 c) Non-shuffled                            d) None
- 4) Convolution of Ideal filter response and sinc function results in.  
 a) Side Lobe oscillations  
 b) Main Lobe oscillations  
 c) Sharpening of a transition width  
 d) Decrease in main lobe
- 5) Unwrapped phase response of FIR filter in pass band is \_\_\_\_\_.  
 a) Exponentially increasing              b) Exponentially decreasing  
 c) Non- linear                                d) linear
- 6) When analog butter worth filter is converted to DT filter using Impulse Invariance method, then \_\_\_\_\_.  
 a) Aliasing can be eliminated  
 b) Aliasing is always present  
 c) Aliasing can be reduced by reducing T  
 d) Aliasing cannot be reduced by reducing T
- 7) The binary signed number 0.11010111 when rounded to seven bits will result in number given by \_\_\_\_\_.  
 a) 0.1101011                                b) 0.1101010  
 c) 0.1101100                                d) 0.1101110
- 8) Properties of butter worth low pass filter is given by \_\_\_\_\_.  
 a) The poles of butter worth filter lies on a circle  
 b) The poles of butter worth filter lies outside the a circle  
 c) The poles of butter worth filter lies inside the a circle  
 d) Not a real sequence

- 9) The mapping for Impulse Invariance Method is \_\_\_\_\_.  
a) many to many mapping                      b) many to one mapping  
c) one to one mapping                          d) none of above
- 10) Impulse invariant method will convert analog filter to DT filter that has \_\_\_\_\_.  
a) Same frequency response as that of analog filter and is stable  
b) Different frequency response and is unstable  
c) Same frequency response and is unstable  
d) Different frequency response and is stable
- 11) A Discrete Time signal has \_\_\_\_\_.  
a) Continuous time continuous amplitude  
b) Continuous time discrete amplitude  
c) Discrete time continuous amplitude  
d) Discrete time discrete amplitude
- 12) Circular convolution of the sequences  $x(n)=\{1,2,1\}$  and  $h(n)=\{1,-2,2\}$  is \_\_\_\_\_.  
a)  $\{1,2,1\}$                                               b)  $\{3,2,1\}$   
c)  $\{3,2,-1\}$                                             d)  $\{3,2,2\}$
- 13) Multiplication are required to compute N point DFT \_\_\_\_\_.  
a) N                                                      b)  $N(N-1)$   
c)  $N^2$                                                   d)  $N^3$
- 14) The magnitude response for DFT exhibits complex conjugate property if time sequence is \_\_\_\_\_.  
a) a real sequence                                      b) a complex sequence  
c) an imaginary sequence                            d) not a real sequence

- e) Explain Chirp 'Z' transform in short.

**Q.3 Attempt any two.** **16**

- a) Determine the output of a linear FIR filter whose impulse response  $h(n) = \{1, 2, 3\}$  and the input signal  $x(n) = \{1, 2, 3, 4, 5, 6, 7, 8, 9\}$  using overlap save method, verify by linear convolution.
- b) Determine the DFT of the given data sequence  
 $X(n) = \{-1, 2, -3, 4, 9, -20, 12, 6\}$   
By Decimation in time FFT Algorithm.
- c) Given  $x(n) = 2^n$  and  $N=8$ , find  $X(k)$  using DIF FFT algorithm.

**Section – II**

**Q.4 Solve Any Three.** **12**

- a) Explain in detail Fourier Series Design Method.
- b) Realize the system with difference equation in Cascade Form.  
$$y(n) = \frac{3}{4}y(n-1) - \frac{1}{8}y(n-2) + x(n) + \frac{1}{3}x(n-1)$$
- c) Explain the finite word length effect in FIR Filter.
- d) What is warping effect? What is its effect on magnitude and phase response?
- e) Explain the application of DSP in Telecommunication.

**Q.5 Solve any two.** **16**

- a) Design a ideal high pass filter with a frequency response using hanning window.  
$$Hd(e^{j\omega}) = 1 \quad \text{for } \frac{\pi}{4} \leq |\omega| \leq \pi$$
  
$$= 0 \quad \text{for } |\omega| \leq \frac{\pi}{4}$$
  
Find the values of  $h(n)$  for  $N=11$  and Find  $H(Z)$ .
- b) Apply impulse invariant method and find  $H(z)$  for  $H(s) = \frac{s+a}{(s+a)^2+b^2}$
- c) A digital filter with a 3dB bandwidth of  $0.25\pi$  is to be designed from the analog filter whose system response is  $H(s) = \frac{\Omega_c}{s+\Omega_c}$  Use Bilinear transformation and obtain  $H(z)$ .

- 8) 8255 is interfaced with 8085 in memory mapped I/O mode, then to read the data and store to I/O, respectively, uses the instructions \_\_\_\_\_.
- a) IN add , OUT add                      b) STA, add , LDA add  
c) LDA add, LDA add                      d) LDA add, STA add
- 9) Control word format for mode 0 of 8253 for counter 0, Read/Load LSB data byte only and BCD counter is \_\_\_\_\_.
- a) 10 H                                      b) 12 H  
c) 11 H                                      d) None of the above
- 10) How many flags are there in 8086?
- a) 9                                              b) 8  
c) 10                                            d) 7
- 11) Direction of Gate signal for 8253 IC is \_\_\_\_\_.
- a) Input                                        b) Output  
c) Bidirectional                            d) None
- 12) Key debouncing can be obtained thro \_\_\_\_\_.
- a) Only software                            b) Only hardware  
c) Both hardware & software            d) None
- 13) In control word format, if RL=1 and RL0=0 then the operation performed is \_\_\_\_\_.
- a) read /Load Least significant byte only  
b) read /Load most significant byte only  
c) read /Load LSB First and then MSB  
d) read /Load MSB First and then LSB
- 14) 8251 supports the baud rate for asynchronous communication is \_\_\_\_\_.
- a) DC to 19.2 K band                      b) DC to 64 K band  
c) DC to 128 K band                        d) Any baud rate

 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicates full marks.  
 3) Assume suitable data if necessary.

**Section – I**

- Q.2 Solve any four. 16**
- a) Write an ALP for addition of two 16 bit BCD numbers.
  - b) Compare memory mapped I/O and I/O mapped I/O in detail.
  - c) Describe the features of 8085.
  - d) Explain in detail addressing modes of 8085.
  - e) Write an ALP to generate delay of 100 ms using crystal frequency of 3 MHz.

- Q.3 Solve any two. 12**
- a) Explain the following instructions in detail.
    - 1) PUSH B
    - 2) DAD D
    - 3) INX H
    - 4) CMP B
  - b) Interface 6K x 8 EPROM memory using 2k x 8 memory chip. Give addressing range of each chip.
  - c) Draw and Explain hardware Interrupt structure of 8085.

**Section – II**

- Q.4 Solve any three. 12**
- a) Explain mode 0 and mode 1 of 8255 PPI.
  - b) Draw flag register of 8086 microprocessor. List the features of Pentium processor.
  - c) Interface 8085 with 8255 using Memory mapped I/O technique.
  - d) Draw and explain block diagram of 8251.

- Q.5 Solve any two. 16**
- a) Explain IC 8253 by considering the following parameters.
    - 1) Feature.
    - 2) Internal Block Diagram.
    - 3) Control word format.
  - b) Interface ADC (8 bit, 8 channel) with 8085. Explain the interfacing circuit. Write ALP to read analog input and store the digital value at some memory location. Assume I/O mapped I/O technique.
  - c) Interface stepper motor with 8085 microprocessor. Write an ALP to rotate stepper motor for only 180 degree angle rotation in clockwise direction then stop. Assume step angle=7.5 degree/step.

a) 10 H  
b) 12 H  
c) 11 H  
d) None of the above
- 3) How many flags are there in 8086?  
a) 9  
b) 8  
c) 10  
d) 7
- 4) Direction of Gate signal for 8253 IC is \_\_\_\_\_.  
a) Input  
b) Output  
c) Bidirectional  
d) None
- 5) Key debouncing can be obtained thro \_\_\_\_\_.  
a) Only software  
b) Only hardware  
c) Both hardware & software  
d) None
- 6) In control word format, if RL=1 and RL0=0 then the operation performed is \_\_\_\_\_.  
a) read /Load Least significant byte only  
b) read /Load most significant byte only  
c) read /Load LSB First and then MSB  
d) read /Load MSB First and then LSB
- 7) 8251 supports the baud rate for asynchronous communication is \_\_\_\_\_.  
a) DC to 19.2 K band  
b) DC to 64 K band  
c) DC to 128 K band  
d) Any baud rate
- 8) The contents of accumulator before CMA instruction are A5 H. Its contents after instruction execution is \_\_\_\_\_.  
a) A5H  
b) 5AH  
c) AAH  
d) 55H

- 9) The contents of accumulator after execution of following Instructions will be,  
MVI A, B7 H  
ORA A  
RAL
- |        |        |
|--------|--------|
| a) 4FH | b) 5EH |
| c) 5FH | d) EFH |
- 10) The width of address bus and data bus of 8085 are respectively \_\_\_\_\_.  
a) 16,8  
b) 8,16  
c) 8,8  
d) 16,16
- 11) In response to RST 7.5 interrupt, the execution of control transfers to memory location \_\_\_\_\_.  
a) 0000H  
b) 002CH  
c) 0034H  
d) 003CH
- 12) The status of S0 and S1 pins for memory write is \_\_\_\_\_.  
a) 0,0  
b) 0,1  
c) 1,0  
d) 1,1
- 13) If the contents of SP are 1000H, the content of B and C registers after PUSH B instruction are \_\_\_\_\_.  
a) 0FFFH, 0FFE H  
b) 0FFE H, 0FFF  
c) 1000 H, 0FFF H  
d) 1000 H, 1001H
- 14) In an 8085 based system, the maximum number of input output devices can be connected using I/O mapped I/O method is \_\_\_\_\_.  
a) 64  
b) 512  
c) 256  
d) 65536

**T.E. (Part – I) (Old) (CGPA) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**MICROPROCESSORS**

Day & Date: Monday, 16-12-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 56

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicates full marks.  
 3) Assume suitable data if necessary.

**Section – I**

- Q.2 Solve any four.** **16**
- a) Write an ALP for addition of two 16 bit BCD numbers.
  - b) Compare memory mapped I/O and I/O mapped I/O in detail.
  - c) Describe the features of 8085.
  - d) Explain in detail addressing modes of 8085.
  - e) Write an ALP to generate delay of 100 ms using crystal frequency of 3 MHz.

- Q.3 Solve any two.** **12**
- a) Explain the following instructions in detail.
    - 1) PUSH B
    - 2) DAD D
    - 3) INX H
    - 4) CMP B
  - b) Interface 6K x 8 EPROM memory using 2k x 8 memory chip. Give addressing range of each chip.
  - c) Draw and Explain hardware Interrupt structure of 8085.

**Section – II**

- Q.4 Solve any three.** **12**
- a) Explain mode 0 and mode 1 of 8255 PPI.
  - b) Draw flag register of 8086 microprocessor. List the features of Pentium processor.
  - c) Interface 8085 with 8255 using Memory mapped I/O technique.
  - d) Draw and explain block diagram of 8251.

- Q.5 Solve any two.** **16**
- a) Explain IC 8253 by considering the following parameters.
    - 1) Feature.
    - 2) Internal Block Diagram.
    - 3) Control word format.
  - b) Interface ADC (8 bit, 8 channel) with 8085. Explain the interfacing circuit. Write ALP to read analog input and store the digital value at some memory location. Assume I/O mapped I/O technique.
  - c) Interface stepper motor with 8085 microprocessor. Write an ALP to rotate stepper motor for only 180 degree angle rotation in clockwise direction then stop. Assume step angle=7.5 degree/step.

**Electronics & Telecommunication Engineering**  
**MICROPROCESSORS**

Day & Date: Monday, 16-12-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 70

- Instructions:** 1) Q. No. 1 is compulsory and should be solved in first 30 minutes in answer book.  
2) Figures to the right indicates full marks.  
3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 14

**Q.1 Choose the correct alternatives from the options.**

**14**

- 1) The status of S0 and S1 pins for memory write is \_\_\_\_\_.  
a) 0,0                                      b) 0,1  
c) 1,0                                      d) 1,1
- 2) If the contents of SP are 1000H, the content of B and C registers after PUSH B instruction are \_\_\_\_\_.  
a) 0FFFH, 0FFE H                          b) 0FFE H, 0FFF  
c) 1000 H, 0FFF H                          d) 1000 H, 1001H
- 3) In an 8085 based system, the maximum number of input output devices can be connected using I/O mapped I/O method is \_\_\_\_\_.  
a) 64                                            b) 512  
c) 256                                          d) 65536
- 4) 8255 is interfaced with 8085 in memory mapped I/O mode, then to read the data and store to I/O, respectively, uses the instructions \_\_\_\_\_.  
a) IN add , OUT add                          b) STA, add , LDA add  
c) LDA add, LDA add                          d) LDA add, STA add
- 5) Control word format for mode 0 of 8253 for counter 0, Read/Load LSB data byte only and BCD counter is \_\_\_\_\_.  
a) 10 H                                          b) 12 H  
c) 11 H                                          d) None of the above
- 6) How many flags are there in 8086?  
a) 9                                              b) 8  
c) 10                                              d) 7
- 7) Direction of Gate signal for 8253 IC is \_\_\_\_\_.  
a) Input                                          b) Output  
c) Bidirectional                                  d) None
- 8) Key debouncing can be obtained thro \_\_\_\_\_.  
a) Only software                                  b) Only hardware  
c) Both hardware & software                      d) None

- 9) In control word format, if RL=1 and RL0=0 then the operation performed is \_\_\_\_\_.
- a) read /Load Least significant byte only
  - b) read /Load most significant byte only
  - c) read /Load LSB First and then MSB
  - d) read /Load MSB First and then LSB
- 10) 8251 supports the baud rate for asynchronous communication is \_\_\_\_\_.
- a) DC to 19.2 K band
  - b) DC to 64 K band
  - c) DC to 128 K band
  - d) Any baud rate
- 11) The contents of accumulator before CMA instruction are A5 H. Its contents after instruction execution is \_\_\_\_\_.
- a) A5H
  - b) 5AH
  - c) AAH
  - d) 55H
- 12) The contents of accumulator after execution of following Instructions will be,
- MVI A, B7 H  
ORA A  
RAL
- a) 4FH
  - b) 5EH
  - c) 5FH
  - d) EFH
- 13) The width of address bus and data bus of 8085 are respectively \_\_\_\_\_.
- a) 16,8
  - b) 8,16
  - c) 8,8
  - d) 16,16
- 14) In response to RST 7.5 interrupt, the execution of control transfers to memory location \_\_\_\_\_.
- a) 0000H
  - b) 002CH
  - c) 0034H
  - d) 003CH

INDUSTRIAL ELECTRONICS**

Day & Date: Friday, 29-11-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 100

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.  
2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 20

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** **20**

- 1) TRIAC can be termed as \_\_\_\_\_.
  - a) AC switch
  - b) DC switch
  - c) Both a) and b)
  - d) Square wave switch
  
- 2) Thyristor is a semiconductor switch which is \_\_\_\_\_.
  - a) Unidirectional
  - b) Bidirectional
  - c) AC switch
  - d) Both b) and c)
  
- 3) In commutation circuit, employed to turn off an SCR, satisfactory turn off time is obtained when \_\_\_\_\_.
  - a) Circuit turn off time is less than device turn off time
  - b) Circuit turn off time is greater than device turn off time
  - c) Circuit time constant is greater than device turn off time
  - d) Circuit time constant is less than device turn off time
  
- 4) In SCR angle of conduction can be varied by changing \_\_\_\_\_.
  - a) Anode voltage
  - b) Anode current
  - c) Forward current rating
  - d) Gatecurrent
  
- 5) Thyristor can be termed as \_\_\_\_\_ switch and TRIAC can be termed as \_\_\_\_\_ switch.
  - a) AC, DC
  - b) DC, AC
  - c) AC, AC
  - d) DC, DC
  
- 6) Which of the following PNP devices are bidirectional?
  - a) TRIAC
  - b) DIAC
  - c) Thyristor
  - d) Both a and b

- 18) For a step-up chopper, when the duty cycle is increased the average value of the output voltage \_\_\_\_\_.
- a) increases
  - b) decreases
  - c) remains the same
  - d) none
- 19) A three-phase three pulse type controlled converter is constructed using 3 SCR devices. The circuit is supplying an R load with  $\alpha < 30^\circ$ . As such, each SCR device would conduct for \_\_\_\_\_.
- a)  $60^\circ$  each cycle
  - b)  $120^\circ$  each cycle
  - c)  $180^\circ$  each cycle
  - d)  $360^\circ$  each cycle
- 20) In a single phase half-wave thyristor circuit with R load &  $V_s = V_m \sin \omega t$ , the maximum value of the load current can be given by \_\_\_\_\_.
- a)  $2V_m/R$
  - b)  $V_s/R$
  - c)  $V_m/2$
  - d)  $V_s/2$

Electronics & Telecommunication Engineering  
INDUSTRIAL ELECTRONICS**

Day & Date: Friday, 29-11-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 80

- Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full marks.

**Section – I**

- Q.2 Solve any four.** **16**
- a) Explain class C and class D commutation for SCR.
  - b) Draw and explain construction, working & characteristics of DIAC.
  - c) Write a short note on IGBT.
  - d) Explain dv/dt protection for SCR.
  - e) Compare MOSFET and IGBT.
- Q.3 Solve any three.** **24**
- a) Draw and explain the two transistor model of SCR. Derive the anode current equation.
  - b) Draw circuit diagram, waveforms and explain 3-phase half wave Converter with R load.
  - c) Explain construction, working & VI characteristics of TRIAC.
  - d) Explain construction, working & VI characteristics of SCR.

**Section - II**

- Q.4 Attempt any four.** **16**
- a) Explain the principle of dielectric heating.
  - b) Explain working of online UPS with suitable block diagram.
  - c) Explain working multiple pulse width modulation technique.
  - d) Draw and explain single phase to single phase step down cycloconverter.
  - e) Explain static DC circuit breaker.
- Q.5 Attempt any three.** **24**
- a) Explain working of series resonant inverter. Draw input and output waveform.
  - b) Explain principle of induction heating & explain any one applications of induction heating.
  - c) Draw & explain Jones and Morgan chopper.
  - d) Draw & explain single phase parallel inverter with inductive load.

 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 20

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** **20**

- 1) Which of the following PNP devices are bidirectional?
 

|              |                 |
|--------------|-----------------|
| a) TRIAC     | b) DIAC         |
| c) Thyristor | d) Both a and b |
  
- 2) If addition of  $\alpha_1$  and  $\alpha_2$  reaches unity then anode current will reach (w.r.t. two transistor analogy of SCR) \_\_\_\_\_.
 

|             |             |
|-------------|-------------|
| a) zero     | b) infinity |
| c) negative | d) none     |
  
- 3) A single phase fully controlled converter with highly inductive load and freewheeling diode provides \_\_\_\_\_ direction of voltage and \_\_\_\_\_ of current.
 

|                       |                       |
|-----------------------|-----------------------|
| a) Positive, negative | b) Positive, positive |
| c) Negative, negative | d) Negative, positive |
  
- 4) Single phase full converter with highly inductive load is \_\_\_\_\_ quadrant converter.
 

|           |                   |
|-----------|-------------------|
| a) Single | b) Two            |
| c) Four   | d) Both a) and b) |
  
- 5) In single phase full Converter with highly inductive load output is in Inverting mode when \_\_\_\_\_. [Alpha=a]
 

|             |            |
|-------------|------------|
| a) $a < 90$ | b) $a = 0$ |
| c) $a > 90$ | d) None    |
  
- 6) Which chopper circuit uses saturable reactor?
 

|                         |                    |
|-------------------------|--------------------|
| a) Auxiliary commutated | b) Jones Chopper   |
| c) Morgan Chopper       | d) Load commutated |
  
- 7) A cyclo converter can be.
 

|                         |              |
|-------------------------|--------------|
| a) Step up              | b) Step down |
| c) Step up or step down | d) None      |

- 8) In a 3 phase fully controlled converter the firing frequency is \_\_\_\_\_.  
a) 3 times the line frequency      b) 6 times the line frequency  
c) 9 times the line frequency      d) 12 times the line frequency
- 9) The cycloconverter is used in \_\_\_\_\_.  
a) AC drive      b) DC drive  
c) Both      d) None
- 10) Back up time for off line UPS depends on \_\_\_\_\_.  
a) Load      b) Battery  
c) Both      d) None
- 11) Chopper Converter is \_\_\_\_\_.  
a) AC to DC      b) DC to AC  
c) DC to DC      d) AC to AC
- 12) If  $T_{ON}$  is kept constant and  $T_{OFF}$  is varied then chopper control technique is \_\_\_\_\_.  
a) Variable frequency      b) Fixed frequency  
c) Current limit control      d) Both a) and b)
- 13) For a step-up chopper, when the duty cycle is increased the average value of the output voltage \_\_\_\_\_.  
a) increases      b) decreases  
c) remains the same      d) none
- 14) A three-phase three pulse type controlled converter is constructed using 3 SCR devices. The circuit is supplying an R load with  $\alpha < 30^\circ$ . As such, each SCR device would conduct for \_\_\_\_\_.  
a)  $60^\circ$  each cycle      b)  $120^\circ$  each cycle  
c)  $180^\circ$  each cycle      d)  $360^\circ$  each cycle
- 15) In a single phase half-wave thyristor circuit with R load &  $V_s = V_m \sin \omega t$ , the maximum value of the load current can be given by \_\_\_\_\_.  
a)  $2V_m/R$       b)  $V_s/R$   
c)  $V_m/2$       d)  $V_s/2$
- 16) TRIAC can be termed as \_\_\_\_\_.  
a) AC switch      b) DC switch  
c) Both a) and b)      d) Square wave switch
- 17) Thyristor is a semiconductor switch which is \_\_\_\_\_.  
a) Unidirectional      b) Bidirectional  
c) AC switch      d) Both b) and c)
- 18) In commutation circuit, employed to turn off an SCR, satisfactory turn off time is obtained when \_\_\_\_\_.  
a) Circuit turn off time is less than device turn off time  
b) Circuit turn off time is greater than device turn off time  
c) Circuit time constant is greater than device turn off time  
d) Circuit time constant is less than device turn off time

- 19) In SCR angle of conduction can be varied by changing \_\_\_\_\_.  
a) Anode voltage                      b) Anode current  
c) Forward current rating            d) Gatecurrent
- 20) Thyristor can be termed as \_\_\_\_\_ switch and TRIAC can be termed as \_\_\_\_\_ switch.  
a) AC, DC                                b) DC, AC  
c) AC, AC                                d) DC, DC

**T.E. (Part – II) (Old) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
INDUSTRIAL ELECTRONICS**

Day & Date: Friday, 29-11-2019  
Time: 10:00 AM To 01:00 PM

Max. Marks: 80

- Instructions:** 1) All questions are compulsory.  
2) Figures to the right indicate full marks.

**Section – I**

- Q.2 Solve any four.** **16**
- a) Explain class C and class D commutation for SCR.
  - b) Draw and explain construction, working & characteristics of DIAC.
  - c) Write a short note on IGBT.
  - d) Explain dv/dt protection for SCR.
  - e) Compare MOSFET and IGBT.
- Q.3 Solve any three.** **24**
- a) Draw and explain the two transistor model of SCR. Derive the anode current equation.
  - b) Draw circuit diagram, waveforms and explain 3-phase half wave Converter with R load.
  - c) Explain construction, working & VI characteristics of TRIAC.
  - d) Explain construction, working & VI characteristics of SCR.

**Section - II**

- Q.4 Attempt any four.** **16**
- a) Explain the principle of dielectric heating.
  - b) Explain working of online UPS with suitable block diagram.
  - c) Explain working multiple pulse width modulation technique.
  - d) Draw and explain single phase to single phase step down cycloconverter.
  - e) Explain static DC circuit breaker.
- Q.5 Attempt any three.** **24**
- a) Explain working of series resonant inverter. Draw input and output waveform.
  - b) Explain principle of induction heating & explain any one applications of induction heating.
  - c) Draw & explain Jones and Morgan chopper.
  - d) Draw & explain single phase parallel inverter with inductive load.

**T.E. (Part – II) (Old) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**INDUSTRIAL ELECTRONICS**

Day & Date: Friday, 29-11-2019  
 Time: 10:00 AM To 01:00 PM

Max. Marks: 100

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.  
 2) Figures to the right indicate full marks.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 20

**Q.1 Choose the correct alternatives from the options and rewrite the sentence.** **20**

- 1) Which chopper circuit uses saturable reactor?
 

|                         |                    |
|-------------------------|--------------------|
| a) Auxiliary commutated | b) Jones Chopper   |
| c) Morgan Chopper       | d) Load commutated |
- 2) A cyclo converter can be.
 

|                         |              |
|-------------------------|--------------|
| a) Step up              | b) Step down |
| c) Step up or step down | d) None      |
- 3) In a 3 phase fully controlled converter the firing frequency is \_\_\_\_\_.
 

|                               |                                |
|-------------------------------|--------------------------------|
| a) 3 times the line frequency | b) 6 times the line frequency  |
| c) 9 times the line frequency | d) 12 times the line frequency |
- 4) The cycloconverter is used in \_\_\_\_\_.
 

|             |             |
|-------------|-------------|
| a) AC drive | b) DC drive |
| c) Both     | d) None     |
- 5) Back up time for off line UPS depends on \_\_\_\_\_.
 

|         |            |
|---------|------------|
| a) Load | b) Battery |
| c) Both | d) None    |
- 6) Chopper Converter is \_\_\_\_\_.
 

|             |             |
|-------------|-------------|
| a) AC to DC | b) DC to AC |
| c) DC to DC | d) AC to AC |
- 7) If  $T_{ON}$  is kept constant and  $T_{OFF}$  is varied then chopper control technique is \_\_\_\_\_.
 

|                          |                    |
|--------------------------|--------------------|
| a) Variable frequency    | b) Fixed frequency |
| c) Current limit control | d) Both a) and b)  |

- 8) For a step-up chopper, when the duty cycle is increased the average value of the output voltage \_\_\_\_\_.
  - a) increases
  - b) decreases
  - c) remains the same
  - d) none
  
- 9) A three-phase three pulse type controlled converter is constructed using 3 SCR devices. The circuit is supplying an R load with  $\alpha < 30^\circ$ . As such, each SCR device would conduct for \_\_\_\_\_.
  - a)  $60^\circ$  each cycle
  - b)  $120^\circ$  each cycle
  - c)  $180^\circ$  each cycle
  - d)  $360^\circ$  each cycle
  
- 10) In a single phase half-wave thyristor circuit with R load &  $V_s = V_m \sin \omega t$ , the maximum value of the load current can be given by \_\_\_\_\_.
  - a)  $2V_m/R$
  - b)  $V_s/R$
  - c)  $V_m/2$
  - d)  $V_s/2$
  
- 11) TRIAC can be termed as \_\_\_\_\_.
  - a) AC switch
  - b) DC switch
  - c) Both a) and b)
  - d) Square wave switch
  
- 12) Thyristor is a semiconductor switch which is \_\_\_\_\_.
  - a) Unidirectional
  - b) Bidirectional
  - c) AC switch
  - d) Both b) and c)
  
- 13) In commutation circuit, employed to turn off an SCR, satisfactory turn off time is obtained when \_\_\_\_\_.
  - a) Circuit turn off time is less than device turn off time
  - b) Circuit turn off time is greater than device turn off time
  - c) Circuit time constant is greater than device turn off time
  - d) Circuit time constant is less than device turn off time
  
- 14) In SCR angle of conduction can be varied by changing \_\_\_\_\_.
  - a) Anode voltage
  - b) Anode current
  - c) Forward current rating
  - d) Gatecurrent
  
- 15) Thyristor can be termed as \_\_\_\_\_ switch and TRIAC can be termed as \_\_\_\_\_ switch.
  - a) AC, DC
  - b) DC, AC
  - c) AC, AC
  - d) DC, DC
  
- 16) Which of the following PNPN devices are bidirectional?
  - a) TRIAC
  - b) DIAC
  - c) Thyristor
  - d) Both a and b
  
- 17) If addition of  $\alpha_1$  and  $\alpha_2$  reaches unity then anode current will reach (w.r.t. two transistor analogy of SCR) \_\_\_\_\_.
  - a) zero
  - b) infinity
  - c) negative
  - d) none

- 18) A single phase fully controlled converter with highly inductive load and freewheeling diode provides \_\_\_\_\_ direction of voltage and \_\_\_\_\_ of current.
- |                       |                       |
|-----------------------|-----------------------|
| a) Positive, negative | b) Positive, positive |
| c) Negative, negative | d) Negative, positive |
- 19) Single phase full converter with highly inductive load is \_\_\_\_\_ quadrant converter.
- |           |                   |
|-----------|-------------------|
| a) Single | b) Two            |
| c) Four   | d) Both a) and b) |
- 20) In single phase full Converter with highly inductive load output is in Inverting mode when \_\_\_\_\_. [Alpha=a]

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 20

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 20**

- 1) Implication connective is equivalent to Fuzzy relation R as
 

|                                           |                                     |
|-------------------------------------------|-------------------------------------|
| a) $(A \times B) \cup (\bar{A} \times Y)$ | b) $(A \times B) \cup (A \times Y)$ |
| c) $(A \times B) \cap (\bar{A} \times Y)$ | d) None                             |
- 2)  $A/B$  is defined as \_\_\_\_\_.
  - a) The collection of all elements in the universe that reside in A & don't reside in B
  - b) The collection of all elements in the universe that reside in B & don't reside in A
  - c) Null set
  - d) None
- 3) Fuzzy system are \_\_\_\_\_.
 

|                     |                      |
|---------------------|----------------------|
| a) Control system   | b) Rule based system |
| c) Both (a) and (b) | d) None              |
- 4)  $A \cup A' = X$  is called as \_\_\_\_\_.
 

|                             |                           |
|-----------------------------|---------------------------|
| a) Axiom of excluded middle | b) Axiom of Contradiction |
| c) Union operation          | d) None                   |
- 5) The support of a fuzzy set A within a universal set X is the crisp set that contain all elements of X that have \_\_\_\_\_.
  - a) Infinite membership grade in A
  - b) Non zero membership grade in A
  - c) zero membership grade in A
  - d) None
- 6) The induction is performed by \_\_\_\_\_.
 

|                          |                            |
|--------------------------|----------------------------|
| a) Standard value        | b) Mean value calculations |
| c) Entropy minimizations | d) None                    |

- 18) In fuzzy expert systems, the knowledge is usually represented by the set of \_\_\_\_\_.
- |                           |              |
|---------------------------|--------------|
| a) Fuzzy production rules | b) Fuzzy nos |
| c) Fuzzy coefficients     | d) None      |
- 19) The model proposes two types of relation exist between symptoms and disease are\_\_\_\_\_.
- |                        |                            |
|------------------------|----------------------------|
| a) Occurrence relation | b) Confirmability relation |
| c) Both (a) and (b)    | d) All                     |
- 20) Fuzzy regression analysis uses \_\_\_\_\_ to represent the coefficient.
- |                   |                      |
|-------------------|----------------------|
| a) Fuzzy number   | b) Fuzzy coefficient |
| c) Fuzzy function | d) None              |

**Q.2 Attempt any four.**

20

- a) Consider the following two discrete fuzzy sets, which are defined on universe  $X = \{-5, 5\}$ : Construct relation for the rule IF A THEN B

$$A = \text{Zero} = \left\{ \frac{0.2}{-3} + \frac{0.5}{-1} + \frac{1.0}{0} + \frac{0.5}{1} + \frac{0.1}{2} \right\}$$

$$B = \text{positive medium} = \left\{ \frac{0}{0} + \frac{0.7}{1} + \frac{1.0}{2} + \frac{0.5}{3} + \frac{0.2}{4} \right\}$$

- b) Perform the following operations on intervals.  
 1)  $[3, 2] + [3, 4]$   
 2)  $[4, 2] \times [1, 2]$
- c) Differentiate between fuzzy sets and crisp sets.  
 d) Write a short note on C means clustering.  
 e) Find the Cartesian product represented by the relation  $R = X \times Y$

$$X = \left\{ \frac{0.2}{10} + \frac{0.5}{20} + \frac{0.8}{40} + \frac{1.0}{60} + \frac{0.6}{80} + \frac{0.1}{100} \right\}$$

$$Y = \left\{ \frac{0.3}{0.5} + \frac{0.6}{1} + \frac{0.9}{1.5} + \frac{1.0}{4} + \frac{0.6}{8} + \frac{0.3}{20} \right\}$$

- f) Using your own intuition and your own definitions of the universe of discourse, plot fuzzy membership functions for the following variables:  
 Education of people  
 1) Fairly educated  
 2) Educated  
 3) Highly educated  
 4) Not highly educated  
 5) More or less educated

**Q.3 Answer the Following.**

- a) A fuzzy tolerance relation,  $\tilde{R}$ , is reflexive and symmetric. Find the equivalence relation  $\tilde{R}_e$  and then classify it according to  $\lambda$ -cut levels = {0.7, 0.6, 0.5}.

$$R = \begin{bmatrix} 1 & 0.8 & 0 & 0.2 & 0.1 \\ 0.8 & 1 & 0.9 & 0 & 0.4 \\ 0 & 0.9 & 1 & 0 & 0.3 \\ 0.2 & 0 & 0 & 1 & 0.5 \\ 0.1 & 0.4 & 0.3 & 0.5 & 1 \end{bmatrix}$$

- b) In fuzzy automata, generate fuzzy input and output states under following conditions.

$$\text{Output relation } R = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \\ 0.5 & 1 & 0.7 \end{bmatrix} \text{ and state transition relation}$$

$$S = \left[ \begin{bmatrix} 0 & 0.3 & 0.9 & 1 \\ 0.5 & 1 & 0 & 0.2 \\ 0.6 & 0 & 0 & 1 \\ 0 & 0 & 0 & 1 \end{bmatrix} \right] \left[ \begin{bmatrix} 0 & 0 & 1 & 0 \\ 0.2 & 0 & 0 & 1 \\ 0 & 0 & 0 & 1 \\ 1 & 0.4 & 0 & 0.6 \end{bmatrix} \right]$$

With initial state  $C^1 = [1 \ 0.7 \ 0.6 \ 0.4]$

Inputs  $A1 = [0.4 \ 0]$        $A2 = [1 \ 0]$        $A3 = [1 \ 0.7]$

**OR**

- b) What is defuzzification? Explain methods of defuzzification?

**Section – II**

**Q.4 Answer the following.**

20

- a) A manufacturing company is planning to purchase a lathe and is assessing the proposals from four lathe manufacturers. The company has developed a reciprocal relation for the four manufacturers based on the speed of delivery of the lathes and the cost. The relation is

$$R = \begin{bmatrix} 0 & 0.1 & 0.7 & 0.2 \\ 0.9 & 0 & 0.6 & 1 \\ 0.3 & 0.4 & 0 & 0.5 \\ 0.8 & 0 & 0.5 & 0 \end{bmatrix}$$

Calculate the degree of preference measures, and the distance to Type I, Type II consensus. Explain the differences between the distances to the three consensuses.

**OR**

- a) Explain following
  - 1) Fuzzy linear programming
  - 2) Nontransitive ranking
- b) Explain FSPC for measurement and attribute SPC.

**Q.5 Attempt any four.****20**

- a) Write a short note on Type 2 fuzzy.
- b) Explain application of fuzzy in Genetic.
- c) Explain fuzzy ranking method.
- d) Explain simple fuzzy control system.
- e) Explain Fuzzy Cognitive Map.

**B.E. (Part – II) (Old) Examination Nov/Dec-2019  
Electronics & Telecommunication Engineering  
FUZZY LOGIC**

Day & Date: Wednesday, 27-11-2019  
Time: 02:30 PM To 05:30 PM

Max. Marks: 100

- Instructions:** 1) Q. No. 1 is compulsory and it should be solved in first 30 minutes in answer book.  
2) Figures to the right indicate full marks.  
3) Assume suitable data if necessary.

**MCQ/Objective Type Questions**

Duration: 30 Minutes

Marks: 20

**Q.1 Choose the correct alternatives from the options and rewrite the sentence. 20**

- The induction is performed by \_\_\_\_\_.
  - Standard value
  - Mean value calculations
  - Entropy minimizations
  - None
- Centroid method is also known as \_\_\_\_\_.
  - Centre of area
  - Centre of gravity
  - Both (a) and (b)
  - None
- The optimum partition,  $U^*$ , to be the partition that produces \_\_\_\_\_.
  - Max value of J function
  - Min value of J function
  - Value of J function
  - None
- Family of Fuzzy partition matrices,  $M_{FC}$ , for the classification involving C classes and n data points \_\_\_\_\_.
  - $\{(U|\mu_{ik} \in [0,1]; \sum_{i=1}^C \mu_{ik} = 1; 0 < \sum_{k=1}^C < n; \}$
  - $\{(U|\mu_{ik} \in [0,1]; \sum_{i=1}^C \mu_{ik} = 1; 0 < \sum_{i=1}^C < n; \}$
  - $\{(U|\mu_{ik} \in [0,1]; \sum_{i=1}^n \mu_{ik} = 1; 0 < \sum_{k=1}^C < n; \}$
  - None
- Fuzzy relation R based on, IF A, THEN B as \_\_\_\_\_.
  - $B \rightarrow A$
  - $A \rightarrow B$
  - $A \rightarrow \bar{B}$
  - None
- Cognitive maps graphically describes a system in terms of \_\_\_\_\_.
  - Concept variables
  - Concept variables and causal relations
  - Causal relations
  - None

- 7) In simple fuzzy logic controllers, partition the universe of discourse by each variable into a number of fuzzy subsets, assigning each a \_\_\_\_\_.
- a) Membership function                      b) IF-THEN rules  
c) linguistic labels                            d) None
- 8) The physician's medical knowledge is represented as a fuzzy relation between \_\_\_\_\_.
- a) Disease & patient                            b) Symptoms & patient  
c) Both a and b                                d) None
- 9) Chromosomes x & y, to which crossover operation is applied is called \_\_\_\_\_.
- a) Mutation                                      b) Mates  
c) Fitness                                        d) None
- 10) For Nontransitive ranking, we introduce a special notion of \_\_\_\_\_.
- a) Transitive                                    b) Relativity  
c) Ordinal ranking                            d) None
- 11) Interval valued fuzzy sets can further be generalized as \_\_\_\_\_.
- a) Type II fuzzy sets                            b) Ordinary fuzzy sets  
c) Fuzzy power sets                            d) None
- 12) Rank ordering ambiguity demonstrated for both fuzzy and \_\_\_\_\_ variables.
- a) Static                                          b) Constant  
c) Random                                        d) None
- 13) In fuzzy expert systems, the knowledge is usually represented by the set of \_\_\_\_\_.
- a) Fuzzy production rules                      b) Fuzzy nos  
c) Fuzzy coefficients                            d) None
- 14) The model proposes two types of relation exist between symptoms and disease are \_\_\_\_\_.
- a) Occurrence relation                            b) Confirmability relation  
c) Both (a) and (b)                            d) All
- 15) Fuzzy regression analysis uses \_\_\_\_\_ to represent the coefficient.
- a) Fuzzy number                                b) Fuzzy coefficient  
c) Fuzzy function                                d) None
- 16) Implication connective is equivalent to Fuzzy relation R as
- a)  $(A \times B) \cup (\bar{A} \times Y)$                       b)  $(A \times B) \cup (A \times Y)$   
c)  $(A \times B) \cap (\bar{A} \times Y)$                       d) None

- 17)  $A/B$  is defined as \_\_\_\_\_.
- a) The collection of all elements in the universe that reside in A & don't reside in B
  - b) The collection of all elements in the universe that reside in B & don't reside in A
  - c) Null set
  - d) None
- 18) Fuzzy system are \_\_\_\_\_.
- a) Control system
  - b) Rule based system
  - c) Both (a) and (b)
  - d) None
- 19)  $A \cup A' = X$  is called as \_\_\_\_\_.
- a) Axiom of excluded middle
  - b) Axiom of Contradiction
  - c) Union operation
  - d) None
- 20) The support of a fuzzy set A within a universal set X is the crisp set that contain all elements of X that have \_\_\_\_\_.
- a) Infinite membership grade in A
  - b) Non zero membership grade in A
  - c) zero membership grade in A
  - d) None

 3) Assume suitable data if necessary.

**Section – I**

**Q.2 Attempt any four.**

20

- a) Consider the following two discrete fuzzy sets, which are defined on universe  $X = \{-5, 5\}$ : Construct relation for the rule IF A THEN B

$$A = \text{Zero} = \left\{ \frac{0.2}{-3} + \frac{0.5}{-1} + \frac{1.0}{0} + \frac{0.5}{1} + \frac{0.1}{2} \right\}$$

$$B = \text{positive medium} = \left\{ \frac{0}{0} + \frac{0.7}{1} + \frac{1.0}{2} + \frac{0.5}{3} + \frac{0.2}{4} \right\}$$

- b) Perform the following operations on intervals.  
 1)  $[3, 2] + [3, 4]$   
 2)  $[4, 2] \times [1, 2]$
- c) Differentiate between fuzzy sets and crisp sets.  
 d) Write a short note on C means clustering.  
 e) Find the Cartesian product represented by the relation  $R = X \times Y$

$$X = \left\{ \frac{0.2}{10} + \frac{0.5}{20} + \frac{0.8}{40} + \frac{1.0}{60} + \frac{0.6}{80} + \frac{0.1}{100} \right\}$$

$$Y = \left\{ \frac{0.3}{0.5} + \frac{0.6}{1} + \frac{0.9}{1.5} + \frac{1.0}{4} + \frac{0.6}{8} + \frac{0.3}{20} \right\}$$

- f) Using your own intuition and your own definitions of the universe of discourse, plot fuzzy membership functions for the following variables:  
 Education of people  
 1) Fairly educated  
 2) Educated  
 3) Highly educated  
 4) Not highly educated  
 5) More or less educated

**Q.3 Answer the Following.**

- a) A fuzzy tolerance relation,  $\tilde{R}$ , is reflexive and symmetric. Find the equivalence relation  $\tilde{R}_e$  and then classify it according to  $\lambda$ -cut levels = {0.7, 0.6, 0.5}.

$$R = \begin{bmatrix} 1 & 0.8 & 0 & 0.2 & 0.1 \\ 0.8 & 1 & 0.9 & 0 & 0.4 \\ 0 & 0.9 & 1 & 0 & 0.3 \\ 0.2 & 0 & 0 & 1 & 0.5 \\ 0.1 & 0.4 & 0.3 & 0.5 & 1 \end{bmatrix}$$

- b) In fuzzy automata, generate fuzzy input and output states under following conditions.

$$\text{Output relation } R = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \\ 0.5 & 1 & 0.7 \end{bmatrix} \text{ and state transition relation}$$

$$S = \left[ \begin{bmatrix} 0 & 0.3 & 0.9 & 1 \\ 0.5 & 1 & 0 & 0.2 \\ 0.6 & 0 & 0 & 1 \\ 0 & 0 & 0 & 1 \end{bmatrix} \right] \left[ \begin{bmatrix} 0 & 0 & 1 & 0 \\ 0.2 & 0 & 0 & 1 \\ 0 & 0 & 0 & 1 \\ 1 & 0.4 & 0 & 0.6 \end{bmatrix} \right]$$

With initial state  $C^1 = [1 \ 0.7 \ 0.6 \ 0.4]$

Inputs  $A1 = [0.4 \ 0]$        $A2 = [1 \ 0]$        $A3 = [1 \ 0.7]$

**OR**

 c) Fuzzy power sets                        d) None
- 2) Rank ordering ambiguity demonstrated for both fuzzy and \_\_\_\_\_ variables.  
 a) Static                                        b) Constant  
 c) Random                                      d) None
- 3) In fuzzy expert systems, the knowledge is usually represented by the set of \_\_\_\_\_.  
 a) Fuzzy production rules                b) Fuzzy nos  
 c) Fuzzy coefficients                        d) None
- 4) The model proposes two types of relation exist between symptoms and disease are \_\_\_\_\_.  
 a) Occurrence relation                      b) Confirmability relation  
 c) Both (a) and (b)                         d) All
- 5) Fuzzy regression analysis uses \_\_\_\_\_ to represent the coefficient.  
 a) Fuzzy number                              b) Fuzzy coefficient  
 c) Fuzzy function                             d) None
- 6) Implication connective is equivalent to Fuzzy relation R as  
 a)  $(A \times B) \cup (\bar{A} \times Y)$                 b)  $(A \times B) \cup (A \times Y)$   
 c)  $(A \times B) \cap (\bar{A} \times Y)$                 d) None

- 7)  $A/B$  is defined as \_\_\_\_\_.
- The collection of all elements in the universe that reside in A & don't reside in B
  - The collection of all elements in the universe that reside in B & don't reside in A
  - Null set
  - None
- 8) Fuzzy system are \_\_\_\_\_.
- Control system
  - Rule based system
  - Both (a) and (b)
  - None
- 9)  $A \cup A' = X$  is called as \_\_\_\_\_.
- Axiom of excluded middle
  - Axiom of Contradiction
  - Union operation
  - None
- 10) The support of a fuzzy set A within a universal set X is the crisp set that contain all elements of X that have \_\_\_\_\_.
- Infinite membership grade in A
  - Non zero membership grade in A
  - zero membership grade in A
  - None
- 11) The induction is performed by \_\_\_\_\_.
- Standard value
  - Mean value calculations
  - Entropy minimizations
  - None
- 12) Centroid method is also known as \_\_\_\_\_.
- Centre of area
  - Centre of gravity
  - Both (a) and (b)
  - None
- 13) The optimum partition,  $U^*$ , to be the partition that produces \_\_\_\_\_.
- Max value of J function
  - Min value of J function
  - Value of J function
  - None
- 14) Family of Fuzzy partition matrices,  $M_{FC}$ , for the classification involving C classes and n data points \_\_\_\_\_.
- $\{(U|\mu_{ik} \in [0,1]; \sum_{i=1}^C \mu_{ik} = 1; 0 < \sum_{k=1}^C < n; \}$
  - $\{(U|\mu_{ik} \in [0,1]; \sum_{i=1}^C \mu_{ik} = 1; 0 < \sum_{i=1}^C < n; \}$
  - $\{(U|\mu_{ik} \in [0,1]; \sum_{i=1}^n \mu_{ik} = 1; 0 < \sum_{k=1}^C < n; \}$
  - None
- 15) Fuzzy relation R based on, IF A, THEN B as \_\_\_\_\_.
- $B \rightarrow A$
  - $A \rightarrow B$
  - $A \rightarrow \bar{B}$
  - None

- 16) Cognitive maps graphically describes a system in terms of \_\_\_\_\_.  
a) Concept variables  
b) Concept variables and causal relations  
c) Causal relations  
d) None
- 17) In simple fuzzy logic controllers, partition the universe of discourse by each variable into a number of fuzzy subsets, assigning each a \_\_\_\_\_.  
a) Membership function                      b) IF-THEN rules  
c) linguistic labels                              d) None
- 18) The physician's medical knowledge is represented as a fuzzy relation between \_\_\_\_\_.  
a) Disease & patient                              b) Symptoms & patient  
c) Both a and b                                      d) None
- 19) Chromosomes x & y, to which crossover operation is applied is called \_\_\_\_\_.  
a) Mutation                                              b) Mates  
c) Fitness                                                d) None
- 20) For Nontransitive ranking, we introduce a special notion of \_\_\_\_\_.  
a) Transitive                                              b) Relativity  
c) Ordinal ranking                                      d) None

Set **S**

**B.E. (Part – II) (Old) Examination Nov/Dec-2019**  
**Electronics & Telecommunication Engineering**  
**FUZZY LOGIC**

Day & Date: Wednesday, 27-11-2019  
 Time: 02:30 PM To 05:30 PM

Max. Marks: 80

- Instructions:** 1) All questions are compulsory.  
 2) Figures to the right indicate full marks.  
 3) Assume suitable data if necessary.

**Section – I**

**Q.2 Attempt any four.**

20

- a) Consider the following two discrete fuzzy sets, which are defined on universe  $X = \{-5, 5\}$ : Construct relation for the rule IF A THEN B

$$A = \text{Zero} = \left\{ \frac{0.2}{-3} + \frac{0.5}{-1} + \frac{1.0}{0} + \frac{0.5}{1} + \frac{0.1}{2} \right\}$$

$$B = \text{positive medium} = \left\{ \frac{0}{0} + \frac{0.7}{1} + \frac{1.0}{2} + \frac{0.5}{3} + \frac{0.2}{4} \right\}$$

- b) Perform the following operations on intervals.  
 1)  $[3, 2] + [3, 4]$   
 2)  $[4, 2] \times [1, 2]$
- c) Differentiate between fuzzy sets and crisp sets.  
 d) Write a short note on C means clustering.  
 e) Find the Cartesian product represented by the relation  $R = X \times Y$

$$X = \left\{ \frac{0.2}{10} + \frac{0.5}{20} + \frac{0.8}{40} + \frac{1.0}{60} + \frac{0.6}{80} + \frac{0.1}{100} \right\}$$

$$Y = \left\{ \frac{0.3}{0.5} + \frac{0.6}{1} + \frac{0.9}{1.5} + \frac{1.0}{4} + \frac{0.6}{8} + \frac{0.3}{20} \right\}$$

- f) Using your own intuition and your own definitions of the universe of discourse, plot fuzzy membership functions for the following variables:  
 Education of people  
 1) Fairly educated  
 2) Educated  
 3) Highly educated  
 4) Not highly educated  
 5) More or less educated

**Q.3 Answer the Following.**

- a) A fuzzy tolerance relation,  $\tilde{R}$ , is reflexive and symmetric. Find the equivalence relation  $\tilde{R}_e$  and then classify it according to  $\lambda$ -cut levels = {0.7, 0.6, 0.5}.

$$R = \begin{bmatrix} 1 & 0.8 & 0 & 0.2 & 0.1 \\ 0.8 & 1 & 0.9 & 0 & 0.4 \\ 0 & 0.9 & 1 & 0 & 0.3 \\ 0.2 & 0 & 0 & 1 & 0.5 \\ 0.1 & 0.4 & 0.3 & 0.5 & 1 \end{bmatrix}$$

- b) In fuzzy automata, generate fuzzy input and output states under following conditions.

Output relation  $R = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \\ 0.5 & 1 & 0.7 \end{bmatrix}$  and state transition relation

$$S = \left[ \begin{bmatrix} 0 & 0.3 & 0.9 & 1 \\ 0.5 & 1 & 0 & 0.2 \\ 0.6 & 0 & 0 & 1 \\ 0 & 0 & 0 & 1 \end{bmatrix} \right] \left[ \begin{bmatrix} 0 & 0 & 1 & 0 \\ 0.2 & 0 & 0 & 1 \\ 0 & 0 & 0 & 1 \\ 1 & 0.4 & 0 & 0.6 \end{bmatrix} \right]$$

With initial state  $C^1 = [1 \ 0.7 \ 0.6 \ 0.4]$

Inputs  $A1 = [0.4 \ 0]$        $A2 = [1 \ 0]$        $A3 = [1 \ 0.7]$

**OR**

- b) What is defuzzification? Explain methods of defuzzification?

**Section – II**

**Q.4 Answer the following.**

- a) A manufacturing company is planning to purchase a lathe and is assessing the proposals from four lathe manufacturers. The company has developed a reciprocal relation for the four manufacturers based on the speed of delivery of the lathes and the cost. The relation is

$$R = \begin{bmatrix} 0 & 0.1 & 0.7 & 0.2 \\ 0.9 & 0 & 0.6 & 1 \\ 0.3 & 0.4 & 0 & 0.5 \\ 0.8 & 0 & 0.5 & 0 \end{bmatrix}$$

Calculate the degree of preference measures, and the distance to Type I, Type II consensus. Explain the differences between the distances to the three consensuses.

**OR**

- a) Explain following
  - 1) Fuzzy linear programming
  - 2) Nontransitive ranking
- b) Explain FSPC for measurement and attribute SPC.

**Q.5 Attempt any four.****20**

- a) Write a short note on Type 2 fuzzy.
- b) Explain application of fuzzy in Genetic.
- c) Explain fuzzy ranking method.
- d) Explain simple fuzzy control system.
- e) Explain Fuzzy Cognitive Map.
