P

**S.E. (Part – I) (E&TC) (CGPA) Examination, 2016
ENGINEERING MATHEMATICS – III**

Day and Date : Tuesday, 13-12-2016

Max. Marks : 70

Time : 10.00 a.m. to 1.00 p.m.

- Instructions :**
- 1) Attempt **any three** questions from **each** Section.
 - 2) Figures to **right** indicate **full** marks.
 - 3) **Use** of calculator is **allowed**.
 - 4) Q. No. **1** is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. **3**. **Each** question carries **one** mark.
 - 5) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

1) The P.I. of $(D + 1)^3 = e^{-x}$ is

- a) $x e^{-x}$ b) $\frac{x^3}{3} e^{-x}$ c) $\frac{x^2}{2} e^{-x}$ d) ∞

2) $\frac{1}{D^2} x^3$ is equal to

- a) $e^x x^2$ b) $e^x \left(x^2 + \frac{x^3}{3} \right)$ c) $\frac{x^5}{20}$ d) $e^{-x} x^3$

3) If $f(t)$ is a periodic function of period T , then $L\{f(t)\} =$

- a) $\frac{1}{1 - e^{-ST}} \int_0^T e^{-st} f(t) dt$ b) $\frac{1}{1 - e^{-ST}} \int_0^T e^{-st} f(t) dt$
c) $\frac{1}{1 - e^{-ST}} \int_0^\infty e^{-st} f(t) dt$ d) None of these

4) The Laplace transform of $\int_0^t \sin 2u du$ is

- a) $\frac{2}{S^2 + 4}$ b) $\frac{2}{S^2}$ c) $\frac{2}{S(S^2 + 4)}$ d) $\frac{2}{(S^2 + 4)^2}$

P.T.O.

5) $L^{-1}\left\{\frac{S}{4S^2+9}\right\}$ is =

- a) $\frac{1}{4}\cos\left(\frac{3t}{2}\right)$ b) $\frac{1}{4}\cos\left(\frac{2t}{3}\right)$ c) $\cos\left(\frac{9t}{4}\right)$ d) $\frac{1}{4}\cos\left(\frac{9t}{4}\right)$

6) $L^{-1}\left\{\frac{1}{(S-2)^2}\right\} =$

- a) $e^{-2t}t$ b) $\frac{e^{-2t}}{t}$ c) e^{2t} d) $t e^{2t}$

7) The solution of $xp + yq = z$ is

- a) $\phi(x, y) = 0$ b) $\phi\left(\frac{x}{y}, \frac{y}{z}\right) = 0$ c) $\phi(xy, yz) = 0$ d) $\phi(x^2, y^2) = 0$

8) Fourier expansion of $f(x) = \begin{cases} -x, & -2 \leq x \leq 0 \\ x, & 0 \leq x \leq 2 \end{cases}$ in the interval $(-2, 2)$ has

- a) No cosine terms b) No sine terms
c) Both cosine and sine terms d) None of these

9) If $\vec{r} = xi + yj + zk$ and $\vec{a} = \frac{\vec{r}}{3}$ then $\text{div}(\vec{a}) =$

- a) 0 b) 1 c) -1 d) 2

10) Which of the following is not true ?

- a) $\nabla\phi$ is a vector quantity b) $\nabla \cdot \vec{v}$ is a scalar quantity
c) $\nabla \times \vec{v}$ is a scalar quantity d) $\nabla \cdot \nabla\phi = \nabla^2\phi$

11) If $\vec{r} = xi + yj + zk$, then $\nabla \times \vec{r} =$

- a) 3 b) $\frac{1}{3}$ c) 0 d) -3

12) If $z\{f(k)\} = F(z)$, then $z\{a^k f(k)\} =$

- a) $F\left(\frac{a}{z}\right)$ b) $\frac{1}{a} F\left(\frac{z}{a}\right)$ c) $\frac{1}{a} F\left(\frac{a}{z}\right)$ d) $F\left(\frac{z}{a}\right)$

13) The region of convergence of z-transform of the sequence $f(k) = \begin{cases} 1, & k \geq 0 \\ 0, & k < 0 \end{cases}$ is

- a) $|z| > 1$ b) $|z| < 1$ c) $z < 1$ d) $z = 0$

14) The Fourier sine transform $F_s(s)$ is given by

- a) $\sqrt{\frac{2}{\pi}} \int_0^\infty f(x) \cdot \cos sx \, dx$ b) $\sqrt{\frac{\pi}{2}} \int_0^\infty f(x) \sin sx \, dx$
c) $\sqrt{\frac{2}{\pi}} \int_0^\infty f(x) \sin sx \, dx$ d) $\sqrt{\frac{\pi}{2}} \int_0^\infty f(x) \cos sx \, dx$

**S.E. (Part – I) (E&TC) (CGPA) Examination, 2016
ENGINEERING MATHEMATICS – III**

Day and Date : Tuesday, 13-12-2016

Marks : 56

Time : 10.00 a.m. to 1.00 p.m.

Instructions : 1) Attempt **any three** questions from **each** Section.
2) Figures to **right** indicate **full** marks.
3) **Use** of calculator is **allowed**.

SECTION – I

2. a) Solve $(D^2 - 4D + 3)y = e^x \cos 2x$. **3**

b) Solve $(D^3 - 2D + 4)y = 3x^2 - 5x + 2$ **3**

c) In an LCR circuit the charge q on a plate of condenser is given by

$$L \frac{d^2q}{dt^2} + R \frac{dq}{dt} + \frac{q}{C} = 0.$$

Solve the equation with initial conditions $q = q_0$ and $\frac{dq}{dt} = 0$ when $t = 0$ and $CR^2 < 4L$. **3**

3. a) Evaluate the integral by using Laplace transform $\int_0^{\infty} \frac{\cos 6t - \cos 4t}{t} dt$. **3**

b) Express the following functions in terms of Heaviside unit step function and hence find their Laplace transform.

$$f(t) = \begin{cases} \cos t, & 0 < t \leq \pi \\ 1, & \pi < t \leq 2\pi \\ \sin t, & t > 2\pi \end{cases}$$
 3

c) Find $L\{f(t)\}$, where $f(t) = e^{-t}$, $0 < t < 1$ and $f(t+1) = f(t)$. **3**

4. a) Find inverse Laplace transform of $\cot^{-1}\left(\frac{s+a}{b}\right)$. **3**

b) Find $L^{-1}\left\{\frac{s^2 + 2s + 3}{(s^2 + 2s + 2)(s^2 + 2s + 5)}\right\}$. **3**

c) Solve $y'' + 6y' + 9y = 12t^2e^{-3t}$, subject to the conditions, $y(0) = 0$, $y'(0) = 0$ by using Laplace transform method. **4**

OR

c) Find $L^{-1}\left\{\frac{s}{(s+2)(s^2+4)}\right\}$ using convolution theorem. **4**

Set P

5. a) Solve $x^2(y - z)p + y^2(z - x)q = z^2(x - y)$. 3
 b) Solve $z^2(p^2 + q^2) = x + y$. 3
 c) Solve $z^2(p^2 + q^2 + 1) = k^2$. 3

SECTION – II

6. a) Find the tangential and normal components of acceleration of particle moving on the curve $x = t^3 + 1$, $y = t^2$, $z = t$ at $t = 1$. 4
 b) Find the directional derivative of $\phi = 2x^3y - 3y^2z$ at $P(1, 2, -1)$ in the direction towards $Q(3, -1, 5)$. In what direction from P is the directional derivative maximum? Find the magnitude of maximum directional derivative. 3
 c) Show that $\nabla \left(\bar{a} \cdot \nabla \frac{1}{r} \right) = \frac{-\bar{a}}{r^3} + \frac{3(\bar{a} \cdot \bar{r})\bar{r}}{r^5}$ where \bar{a} is a constant vector and r, \bar{r} have usual meaning. 3

7. Attempt **any three** : 9

a) Find z-transform of $x_k = \left(\frac{1}{2}\right)^{|k|}$, for all k .

b) Find $z^{-1} \left\{ \frac{z}{(z-2)(z-3)} \right\}$, $|z| < 2$.

c) Find $z^{-1} \left\{ \frac{z^2}{\left(z - \frac{1}{4}\right)\left(z - \frac{1}{5}\right)} \right\}$, $|z| < \frac{1}{5}$.

d) Find $z \{k2^k + k3^k\}$, $k \geq 0$.

8. a) Find Fourier series of $f(x) = x \sin x$ in $(-\pi, \pi)$. Hence deduce that 5

$$\frac{\pi - 2}{4} = \frac{1}{1 \times 3} - \frac{1}{3 \times 5} + \frac{1}{5 \times 7} - \dots$$

- b) Obtain Fourier expansion for $f(x) = 2x - x^2$ in $(0, 3)$. 4

OR

- b) Expand $\pi x - x^2$ as a sine series in $(0, \pi)$. 4

9. a) Find the Fourier transform of $f(x) = e^{-a|x|}$. 3

b) Express the function $f(x) = \begin{cases} \sin x, & 0 \leq x \leq \pi \\ 0, & x > \pi \end{cases}$ as Fourier sine integral and hence

evaluate $\int_0^\infty \frac{\sin \omega x \sin \pi \omega}{1 - \omega^2} d\omega$. 3

- c) Find $f(x)$ if its Fourier cosine transform is e^{-s} . 3

Q

**S.E. (Part – I) (E&TC) (CGPA) Examination, 2016
ENGINEERING MATHEMATICS – III**

Day and Date : Tuesday, 13-12-2016

Max. Marks : 70

Time : 10.00 a.m. to 1.00 p.m.

- Instructions :**
- 1) Attempt **any three** questions from **each** Section.
 - 2) Figures to **right** indicate **full** marks.
 - 3) **Use** of calculator is **allowed**.
 - 4) Q. No. **1** is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. **3**. **Each** question carries **one** mark.
 - 5) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

- 1) Fourier expansion of $f(x) = \begin{cases} -x, & -2 \leq x \leq 0 \\ x, & 0 \leq x \leq 2 \end{cases}$ in the interval $(-2, 2)$ has
 - a) No cosine terms
 - b) No sine terms
 - c) Both cosine and sine terms
 - d) None of these
- 2) If $\vec{r} = xi + yj + zk$ and $\vec{a} = \frac{\vec{r}}{3}$ then $\text{div}(\vec{a}) =$
 - a) 0
 - b) 1
 - c) -1
 - d) 2
- 3) Which of the following is not true ?
 - a) $\nabla \phi$ is a vector quantity
 - b) $\nabla \cdot \vec{v}$ is a scalar quantity
 - c) $\nabla \times \vec{v}$ is a scalar quantity
 - d) $\nabla \cdot \nabla \phi = \nabla^2 \phi$
- 4) If $\vec{r} = xi + yj + zk$, then $\nabla \times \vec{r} =$
 - a) 3
 - b) $\frac{1}{3}$
 - c) 0
 - d) -3
- 5) If $z\{f(k)\} = F(z)$, then $z\{a^k f(k)\} =$
 - a) $F\left(\frac{a}{z}\right)$
 - b) $\frac{1}{a} F\left(\frac{z}{a}\right)$
 - c) $\frac{1}{a} F\left(\frac{a}{z}\right)$
 - d) $F\left(\frac{z}{a}\right)$
- 6) The region of convergence of z-transform of the sequence $f(k) = \begin{cases} 1, & k \geq 0 \\ 0, & k < 0 \end{cases}$ is
 - a) $|z| > 1$
 - b) $|z| < 1$
 - c) $z < 1$
 - d) $z = 0$

P.T.O.

7) The Fourier sine transform $F_s(s)$ is given by

a) $\sqrt{\frac{2}{\pi}} \int_0^{\infty} f(x) \cdot \cos sx \, dx$

b) $\sqrt{\frac{\pi}{2}} \int_0^{\infty} f(x) \sin sx \, dx$

c) $\sqrt{\frac{2}{\pi}} \int_0^{\infty} f(x) \sin sx \, dx$

d) $\sqrt{\frac{\pi}{2}} \int_0^{\infty} f(x) \cos sx \, dx$

8) The P.I. of $(D + 1)^3 = e^{-x}$ is

a) $x e^{-x}$

b) $\frac{x^3}{3} e^{-x}$

c) $\frac{x^2}{2} e^{-x}$

d) ∞

9) $\frac{1}{D^2} x^3$ is equal to

a) $e^x x^2$

b) $e^x \left(x^2 + \frac{x^3}{3} \right)$

c) $\frac{x^5}{20}$

d) $e^{-x} x^3$

10) If $f(t)$ is a periodic function of period T , then $L\{f(t)\} =$

a) $\frac{1}{1 - e^{-ST}} \int_0^T e^{-st} f(t) \, dt$

b) $\frac{1}{1 - e^{ST}} \int_0^T e^{-st} f(t) \, dt$

c) $\frac{1}{1 - e^{-ST}} \int_0^{\infty} e^{-st} f(t) \, dt$

d) None of these

11) The Laplace transform of $\int_0^t \sin 2u \, du$ is

a) $\frac{2}{S^2 + 4}$

b) $\frac{2}{S^2}$

c) $\frac{2}{S(S^2 + 4)}$

d) $\frac{2}{(S^2 + 4)^2}$

12) $L^{-1} \left\{ \frac{S}{4S^2 + 9} \right\}$ is =

a) $\frac{1}{4} \cos \left(\frac{3t}{2} \right)$

b) $\frac{1}{4} \cos \left(\frac{2t}{3} \right)$

c) $\cos \left(\frac{9t}{4} \right)$

d) $\frac{1}{4} \cos \left(\frac{9t}{4} \right)$

13) $L^{-1} \left\{ \frac{1}{(S - 2)^2} \right\} =$

a) $e^{-2t} t$

b) $\frac{e^{-2t}}{t}$

c) e^{2t}

d) $t e^{2t}$

14) The solution of $xp + yq = z$ is

a) $\phi(x, y) = 0$

b) $\phi \left(\frac{x}{y}, \frac{y}{z} \right) = 0$

c) $\phi(xy, yz) = 0$

d) $\phi(x^2, y^2) = 0$

**S.E. (Part – I) (E&TC) (CGPA) Examination, 2016
ENGINEERING MATHEMATICS – III**

Day and Date : Tuesday, 13-12-2016

Marks : 56

Time : 10.00 a.m. to 1.00 p.m.

Instructions : 1) Attempt **any three** questions from **each** Section.
2) Figures to **right** indicate **full** marks.
3) **Use** of calculator is **allowed**.

SECTION – I

2. a) Solve $(D^2 - 4D + 3)y = e^x \cos 2x$. **3**

b) Solve $(D^3 - 2D + 4)y = 3x^2 - 5x + 2$ **3**

c) In an LCR circuit the charge q on a plate of condenser is given by

$$L \frac{d^2 q}{dt^2} + R \frac{dq}{dt} + \frac{q}{C} = 0.$$

Solve the equation with initial conditions $q = q_0$ and $\frac{dq}{dt} = 0$ when $t = 0$ and $CR^2 < 4L$. **3**

3. a) Evaluate the integral by using Laplace transform $\int_0^{\infty} \frac{\cos 6t - \cos 4t}{t} dt$. **3**

b) Express the following functions in terms of Heaviside unit step function and hence find their Laplace transform.

$$f(t) = \begin{cases} \cos t, & 0 < t \leq \pi \\ 1, & \pi < t \leq 2\pi \\ \sin t, & t > 2\pi \end{cases}.$$
 3

c) Find $L\{f(t)\}$, where $f(t) = e^{-t}$, $0 < t < 1$ and $f(t+1) = f(t)$. **3**

4. a) Find inverse Laplace transform of $\cot^{-1}\left(\frac{s+a}{b}\right)$. **3**

b) Find $L^{-1}\left\{\frac{s^2 + 2s + 3}{(s^2 + 2s + 2)(s^2 + 2s + 5)}\right\}$. **3**

c) Solve $y'' + 6y' + 9y = 12t^2 e^{-3t}$, subject to the conditions, $y(0) = 0$, $y'(0) = 0$ by using Laplace transform method. **4**

OR

c) Find $L^{-1}\left\{\frac{s}{(s+2)(s^2+4)}\right\}$ using convolution theorem. **4**

Set Q

5. a) Solve $x^2(y - z)p + y^2(z - x)q = z^2(x - y)$. 3
 b) Solve $z^2(p^2 + q^2) = x + y$. 3
 c) Solve $z^2(p^2 + q^2 + 1) = k^2$. 3

SECTION – II

6. a) Find the tangential and normal components of acceleration of particle moving on the curve $x = t^3 + 1$, $y = t^2$, $z = t$ at $t = 1$. 4
 b) Find the directional derivative of $\phi = 2x^3y - 3y^2z$ at $P(1, 2, -1)$ in the direction towards $Q(3, -1, 5)$. In what direction from P is the directional derivative maximum? Find the magnitude of maximum directional derivative. 3
 c) Show that $\nabla \left(\bar{a} \cdot \nabla \frac{1}{r} \right) = \frac{-\bar{a}}{r^3} + \frac{3(\bar{a} \cdot \bar{r})\bar{r}}{r^5}$ where \bar{a} is a constant vector and r, \bar{r} have usual meaning. 3

7. Attempt **any three** : 9

a) Find z-transform of $x_k = \left(\frac{1}{2}\right)^{|k|}$, for all k .

b) Find $z^{-1} \left\{ \frac{z}{(z-2)(z-3)} \right\}$, $|z| < 2$.

c) Find $z^{-1} \left\{ \frac{z^2}{\left(z - \frac{1}{4}\right)\left(z - \frac{1}{5}\right)} \right\}$, $|z| < \frac{1}{5}$.

d) Find $z \{k2^k + k3^k\}$, $k \geq 0$.

8. a) Find Fourier series of $f(x) = x \sin x$ in $(-\pi, \pi)$. Hence deduce that 5

$$\frac{\pi - 2}{4} = \frac{1}{1 \times 3} - \frac{1}{3 \times 5} + \frac{1}{5 \times 7} - \dots$$

- b) Obtain Fourier expansion for $f(x) = 2x - x^2$ in $(0, 3)$. 4

OR

- b) Expand $\pi x - x^2$ as a sine series in $(0, \pi)$. 4

9. a) Find the Fourier transform of $f(x) = e^{-a|x|}$. 3

- b) Express the function $f(x) = \begin{cases} \sin x, & 0 \leq x \leq \pi \\ 0, & x > \pi \end{cases}$ as Fourier sine integral and hence

evaluate $\int_0^\infty \frac{\sin \omega x \sin \pi \omega}{1 - \omega^2} d\omega$. 3

- c) Find $f(x)$ if its Fourier cosine transform is e^{-s} . 3

 3

c) Find $L\{f(t)\}$, where $f(t) = e^{-t}$, $0 < t < 1$ and $f(t+1) = f(t)$. **3**

4. a) Find inverse Laplace transform of $\cot^{-1}\left(\frac{s+a}{b}\right)$. **3**

b) Find $L^{-1}\left\{\frac{s^2 + 2s + 3}{(s^2 + 2s + 2)(s^2 + 2s + 5)}\right\}$. **3**

c) Solve $y'' + 6y' + 9y = 12t^2 e^{-3t}$, subject to the conditions, $y(0) = 0$, $y'(0) = 0$ by using Laplace transform method. **4**

OR

c) Find $L^{-1}\left\{\frac{s}{(s+2)(s^2+4)}\right\}$ using convolution theorem. **4**

Set R

5. a) Solve $x^2(y - z)p + y^2(z - x)q = z^2(x - y)$. 3
 b) Solve $z^2(p^2 + q^2) = x + y$. 3
 c) Solve $z^2(p^2 + q^2 + 1) = k^2$. 3

SECTION – II

6. a) Find the tangential and normal components of acceleration of particle moving on the curve $x = t^3 + 1$, $y = t^2$, $z = t$ at $t = 1$. 4
 b) Find the directional derivative of $\phi = 2x^3y - 3y^2z$ at $P(1, 2, -1)$ in the direction towards $Q(3, -1, 5)$. In what direction from P is the directional derivative maximum? Find the magnitude of maximum directional derivative. 3
 c) Show that $\nabla \left(\bar{a} \cdot \nabla \frac{1}{r} \right) = \frac{-\bar{a}}{r^3} + \frac{3(\bar{a} \cdot \bar{r})\bar{r}}{r^5}$ where \bar{a} is a constant vector and r, \bar{r} have usual meaning. 3

7. Attempt **any three** : 9

a) Find z-transform of $x_k = \left(\frac{1}{2}\right)^{|k|}$, for all k .

b) Find $z^{-1} \left\{ \frac{z}{(z-2)(z-3)} \right\}$, $|z| < 2$.

c) Find $z^{-1} \left\{ \frac{z^2}{\left(z - \frac{1}{4}\right)\left(z - \frac{1}{5}\right)} \right\}$, $|z| < \frac{1}{5}$.

d) Find $z \{k2^k + k3^k\}$, $k \geq 0$.

8. a) Find Fourier series of $f(x) = x \sin x$ in $(-\pi, \pi)$. Hence deduce that 5

$$\frac{\pi - 2}{4} = \frac{1}{1 \times 3} - \frac{1}{3 \times 5} + \frac{1}{5 \times 7} - \dots$$

- b) Obtain Fourier expansion for $f(x) = 2x - x^2$ in $(0, 3)$. 4

OR

- b) Expand $\pi x - x^2$ as a sine series in $(0, \pi)$. 4

9. a) Find the Fourier transform of $f(x) = e^{-a|x|}$. 3

b) Express the function $f(x) = \begin{cases} \sin x, & 0 \leq x \leq \pi \\ 0, & x > \pi \end{cases}$ as Fourier sine integral and hence

evaluate $\int_0^\infty \frac{\sin \omega x \sin \pi \omega}{1 - \omega^2} d\omega$. 3

- c) Find $f(x)$ if its Fourier cosine transform is e^{-s} . 3

**S.E. (Part – I) (E&TC) (CGPA) Examination, 2016
ENGINEERING MATHEMATICS – III**

Day and Date : Tuesday, 13-12-2016

Max. Marks : 70

Time : 10.00 a.m. to 1.00 p.m.

- Instructions :**
- 1) Attempt **any three** questions from **each** Section.
 - 2) Figures to **right** indicate **full** marks.
 - 3) **Use** of calculator is **allowed**.
 - 4) Q. No. **1** is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. **3**. **Each** question carries **one** mark.
 - 5) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

1) Which of the following is not true ?

- | | |
|---|--|
| a) $\nabla\phi$ is a vector quantity | b) $\nabla \cdot \bar{v}$ is a scalar quantity |
| c) $\nabla \times \bar{v}$ is a scalar quantity | d) $\nabla \cdot \nabla\phi = \nabla^2\phi$ |

2) If $\bar{r} = xi + yj + zk$, then $\nabla \times \bar{r} =$

- | | | | |
|------|------------------|------|-------|
| a) 3 | b) $\frac{1}{3}$ | c) 0 | d) -3 |
|------|------------------|------|-------|

3) If $z\{f(k)\} = F(z)$, then $z\{a^k f(k)\} =$

- | | | | |
|--------------------------------|--|--|--------------------------------|
| a) $F\left(\frac{a}{z}\right)$ | b) $\frac{1}{a} F\left(\frac{z}{a}\right)$ | c) $\frac{1}{a} F\left(\frac{a}{z}\right)$ | d) $F\left(\frac{z}{a}\right)$ |
|--------------------------------|--|--|--------------------------------|

4) The region of convergence of z-transform of the sequence $f(k) = \begin{cases} 1, & k \geq 0 \\ 0, & k < 0 \end{cases}$ is

- | | | | |
|--------------|--------------|------------|------------|
| a) $ z > 1$ | b) $ z < 1$ | c) $z < 1$ | d) $z = 0$ |
|--------------|--------------|------------|------------|

5) The Fourier sine transform $F_s(s)$ is given by

- | | |
|--|--|
| a) $\sqrt{\frac{2}{\pi}} \int_0^\infty f(x) \cdot \cos sx \, dx$ | b) $\sqrt{\frac{\pi}{2}} \int_0^\infty f(x) \sin sx \, dx$ |
| c) $\sqrt{\frac{2}{\pi}} \int_0^\infty f(x) \sin sx \, dx$ | d) $\sqrt{\frac{\pi}{2}} \int_0^\infty f(x) \cos sx \, dx$ |

6) The P.I. of $(D + 1)^3 = e^{-x}$ is

- | | | | |
|---------------|---------------------------|---------------------------|-------------|
| a) $x e^{-x}$ | b) $\frac{x^3}{3} e^{-x}$ | c) $\frac{x^2}{2} e^{-x}$ | d) ∞ |
|---------------|---------------------------|---------------------------|-------------|

P.T.O.

7) $\frac{1}{D^2}x^3$ is equal to

- a) $e^x x^2$ b) $e^x \left(x^2 + \frac{x^3}{3} \right)$ c) $\frac{x^5}{20}$ d) $e^{-x} x^3$

8) If $f(t)$ is a periodic function of period T , then $L\{f(t)\} =$

- a) $\frac{1}{1-e^{-ST}} \int_0^T e^{-st} f(t) dt$ b) $\frac{1}{1-e^{ST}} \int_0^T e^{-st} f(t) dt$
 c) $\frac{1}{1-e^{-ST}} \int_0^\infty e^{-st} f(t) dt$ d) None of these

9) The Laplace transform of $\int_0^t \sin 2u du$ is

- a) $\frac{2}{S^2 + 4}$ b) $\frac{2}{S^2}$ c) $\frac{2}{S(S^2 + 4)}$ d) $\frac{2}{(S^2 + 4)^2}$

10) $L^{-1} \left\{ \frac{S}{4S^2 + 9} \right\}$ is =

- a) $\frac{1}{4} \cos\left(\frac{3t}{2}\right)$ b) $\frac{1}{4} \cos\left(\frac{2t}{3}\right)$ c) $\cos\left(\frac{9t}{4}\right)$ d) $\frac{1}{4} \cos\left(\frac{9t}{4}\right)$

11) $L^{-1} \left\{ \frac{1}{(S-2)^2} \right\} =$

- a) e^{-2t} b) $\frac{e^{-2t}}{t}$ c) e^{2t} d) $t e^{2t}$

12) The solution of $xp + yq = z$ is

- a) $\phi(x, y) = 0$ b) $\phi\left(\frac{x}{y}, \frac{y}{z}\right) = 0$ c) $\phi(xy, yz) = 0$ d) $\phi(x^2, y^2) = 0$

13) Fourier expansion of $f(x) = \begin{cases} -x, & -2 \leq x \leq 0 \\ x, & 0 \leq x \leq 2 \end{cases}$ in the interval $(-2, 2)$ has

- a) No cosine terms b) No sine terms
 c) Both cosine and sine terms d) None of these

14) If $\vec{r} = xi + yj + zk$ and $\vec{a} = \frac{\vec{r}}{3}$ then $\text{div}(\vec{a}) =$

- a) 0 b) 1 c) -1 d) 2

Seat No.

**S.E. (Part – I) (E&TC) (CGPA) Examination, 2016
ENGINEERING MATHEMATICS – III**

Day and Date : Tuesday, 13-12-2016

Marks : 56

Time : 10.00 a.m. to 1.00 p.m.

Instructions : 1) Attempt **any three** questions from **each** Section.
2) Figures to **right** indicate **full** marks.
3) **Use** of calculator is **allowed**.

SECTION – I

2. a) Solve $(D^2 - 4D + 3)y = e^x \cos 2x$. **3**

b) Solve $(D^3 - 2D + 4)y = 3x^2 - 5x + 2$ **3**

c) In an LCR circuit the charge q on a plate of condenser is given by

$$L \frac{d^2 q}{dt^2} + R \frac{dq}{dt} + \frac{q}{C} = 0.$$

Solve the equation with initial conditions $q = q_0$ and $\frac{dq}{dt} = 0$ when $t = 0$ and $CR^2 < 4L$. **3**

3. a) Evaluate the integral by using Laplace transform $\int_0^{\infty} \frac{\cos 6t - \cos 4t}{t} dt$. **3**

b) Express the following functions in terms of Heaviside unit step function and hence find their Laplace transform.

$$f(t) = \begin{cases} \cos t, & 0 < t \leq \pi \\ 1, & \pi < t \leq 2\pi \\ \sin t, & t > 2\pi \end{cases}.$$
 3

c) Find $L\{f(t)\}$, where $f(t) = e^{-t}$, $0 < t < 1$ and $f(t+1) = f(t)$. **3**

4. a) Find inverse Laplace transform of $\cot^{-1}\left(\frac{s+a}{b}\right)$. **3**

b) Find $L^{-1}\left\{\frac{s^2 + 2s + 3}{(s^2 + 2s + 2)(s^2 + 2s + 5)}\right\}$. **3**

c) Solve $y'' + 6y' + 9y = 12t^2 e^{-3t}$, subject to the conditions, $y(0) = 0$, $y'(0) = 0$ by using Laplace transform method. **4**

OR

c) Find $L^{-1}\left\{\frac{s}{(s+2)(s^2+4)}\right\}$ using convolution theorem. **4**

Set S

5. a) Solve $x^2(y - z)p + y^2(z - x)q = z^2(x - y)$. 3
 b) Solve $z^2(p^2 + q^2) = x + y$. 3
 c) Solve $z^2(p^2 + q^2 + 1) = k^2$. 3

SECTION – II

6. a) Find the tangential and normal components of acceleration of particle moving on the curve $x = t^3 + 1$, $y = t^2$, $z = t$ at $t = 1$. 4
 b) Find the directional derivative of $\phi = 2x^3y - 3y^2z$ at $P(1, 2, -1)$ in the direction towards $Q(3, -1, 5)$. In what direction from P is the directional derivative maximum? Find the magnitude of maximum directional derivative. 3
 c) Show that $\nabla \left(\bar{a} \cdot \nabla \frac{1}{r} \right) = \frac{-\bar{a}}{r^3} + \frac{3(\bar{a} \cdot \bar{r})\bar{r}}{r^5}$ where \bar{a} is a constant vector and r, \bar{r} have usual meaning. 3

7. Attempt **any three** : 9

a) Find z-transform of $x_k = \left(\frac{1}{2}\right)^{|k|}$, for all k .

b) Find $z^{-1} \left\{ \frac{z}{(z-2)(z-3)} \right\}$, $|z| < 2$.

c) Find $z^{-1} \left\{ \frac{z^2}{\left(z - \frac{1}{4}\right)\left(z - \frac{1}{5}\right)} \right\}$, $|z| < \frac{1}{5}$.

d) Find $z \{k2^k + k3^k\}$, $k \geq 0$.

8. a) Find Fourier series of $f(x) = x \sin x$ in $(-\pi, \pi)$. Hence deduce that 5

$$\frac{\pi - 2}{4} = \frac{1}{1 \times 3} - \frac{1}{3 \times 5} + \frac{1}{5 \times 7} - \dots$$

- b) Obtain Fourier expansion for $f(x) = 2x - x^2$ in $(0, 3)$. 4

OR

- b) Expand $\pi x - x^2$ as a sine series in $(0, \pi)$. 4

9. a) Find the Fourier transform of $f(x) = e^{-a|x|}$. 3

- b) Express the function $f(x) = \begin{cases} \sin x, & 0 \leq x \leq \pi \\ 0, & x > \pi \end{cases}$ as Fourier sine integral and hence

evaluate $\int_0^\infty \frac{\sin \omega x \sin \pi \omega}{1 - \omega^2} d\omega$. 3

- c) Find $f(x)$ if its Fourier cosine transform is e^{-s} . 3

ELECTRONIC CIRCUIT ANALYSIS AND DESIGN – I**

Day and Date : Thursday, 15-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 70

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.

2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

14

- 1) Improper location of Q point leads to _____ of transistor amplifier.
 - a) Distortion in input
 - b) Distortion in output
 - c) Heavy loading
 - d) None of these
- 2) The h-parameter of BJT are called
 - a) Large signal parameters
 - b) Small signal parameters
 - c) T-parameters
 - d) z-parameters
- 3) Low frequency response of BJT amplifier depends on
 - a) Input resistance
 - b) Output resistance
 - c) Both i/p and o/p resistance
 - d) None of these
- 4) JFET can be used as an _____ ohmic region.
 - a) Oscillator
 - b) Clock generator
 - c) Flip-flop
 - d) Resistor
- 5) Power dissipated in transistor amplifier depends on
 - a) V_{cc}
 - b) R_e
 - c) V_{ce} and I_c
 - d) None

P.T.O.

- 6) In voltage regulator using zener, the output voltage depends on
a) V_{in} b) V_z c) R_L d) All of these
- 7) Common base configuration in BJT provides
a) Unity current gain b) Unity voltage gain
c) Both (a) and (b) d) None of these
- 8) In any circuit Zener diode is
a) Acts as regulator after reverse breakdown
b) Acting as regulator in forward bias
c) A very fast photo diode
d) Introduce a dc voltage depends on thermally generated minority carriers
- 9) Ripple voltage increases in shunt capacitor filter with
a) Decreasing load current b) Increasing load current
c) Zero load current d) None of these
- 10) Increase in load current for series inductor filter
a) Decrease ripple b) Increase ripple
c) Does not change the ripple d) None of these
- 11) Load current in half-wave rectifier with filter capacitor flows for
a) Both half-cycles of input b) One half-cycle
c) Less than half cycle d) None of these
- 12) The ripple frequency in a full-wave rectifier is
a) Double the input frequency b) Equal to the input frequency
c) Half the input frequency d) None of these
- 13) The forward resistance of an ideal rectifier diode should be
a) Infinity b) Negative c) Zero d) None of these
- 14) The reverse saturation current with increasing reverse bias
a) Increases b) Decreases
c) Remains constant d) Zero

ELECTRONIC CIRCUIT ANALYSIS AND DESIGN – I**

Day and Date : Thursday, 15-12-2016

Marks : 56

Time : 10.00 a.m. to 1.00 p.m.

SECTION – I

2. Solve **any four** : **(3.5×4=14)**

- a) Explain ratings for PN junction diode in detail.
- b) Explain with diagram voltage tripler.
- c) Derive expression for ripple factor of LC filter.
- d) Derive expression for zener regulator for variable input voltage and fixed load resistance.
- e) Explain the operation of the circuit shown below. Draw input and output waveforms and transfer characteristics. Assume $V_i = 6 \sin \omega t$, $V_d = 0$, $V = 3V$.

3. Attempt **any two** : **(7×2=14)**

- a) Explain types of shunt clipper circuits and shunt clampers with transfer characteristics.
- b) Draw circuit diagram of full wave rectifier with C filter and explain its working. Derive expression of ripple factor of C filter.
- c) Design voltage source using full wave bridge rectifier with inductor filter for ripple factor of 10% and V_{dc} of 11 V and I_{dc} of 100 mA. Line frequency is 50 Hz.

Set P

SECTION – II

4. Solve **any four** : **(3.5×4=14)**
- a) Compare BJT transistor and FET with respect to different parameters.
 - b) Derive equation for stability factor for voltage divider bias circuit.
 - c) Explain stability in transistor amplifier and compare amplifier with different biasing.
 - d) Explain types of MOSFET with output transfer characteristics.
 - e) Define significance of hybrid parameters in amplifier analysis.
5. Solve **any two** : **(7×2=14)**
- a) Explain frequency response of transistor amplifier. Derive expression for lower and higher cutoff frequencies.
 - b) Explain following terms :
 - 1) Early effect
 - 2) Thermal runaway
 - 3) Relation between α and β .
 - c) Derive expression A_{vs} , A_{is} , R_i , R_o for transistor amplifier using voltage divider bias with emitter bypass capacitor.

- Derive expression for ripple factor of LC filter.
- Derive expression for zener regulator for variable input voltage and fixed load resistance.
- Explain the operation of the circuit shown below. Draw input and output waveforms and transfer characteristics. Assume $V_i = 6 \sin \omega t$, $V_d = 0$, $V = 3V$.

3. Attempt **any two** : **(7×2=14)**

- Explain types of shunt clipper circuits and shunt clampers with transfer characteristics.
- Draw circuit diagram of full wave rectifier with C filter and explain its working. Derive expression of ripple factor of C filter.
- Design voltage source using full wave bridge rectifier with inductor filter for ripple factor of 10% and V_{dc} of 11 V and I_{dc} of 100 mA. Line frequency is 50 Hz.

Set R

SECTION – II

4. Solve **any four** : **(3.5×4=14)**
- a) Compare BJT transistor and FET with respect to different parameters.
 - b) Derive equation for stability factor for voltage divider bias circuit.
 - c) Explain stability in transistor amplifier and compare amplifier with different biasing.
 - d) Explain types of MOSFET with output transfer characteristics.
 - e) Define significance of hybrid parameters in amplifier analysis.
5. Solve **any two** : **(7×2=14)**
- a) Explain frequency response of transistor amplifier. Derive expression for lower and higher cutoff frequencies.
 - b) Explain following terms :
 - 1) Early effect
 - 2) Thermal runaway
 - 3) Relation between α and β .
 - c) Derive expression A_{vs} , A_{is} , R_i , R_o for transistor amplifier using voltage divider bias with emitter bypass capacitor.

**S.E. (E and TC) (Part – I) (CGPA) Examination, 2016
ELECTRONIC CIRCUIT ANALYSIS AND DESIGN – I**

Day and Date : Thursday, 15-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 70

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.

2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

14

- 1) Increase in load current for series inductor filter
 - a) Decrease ripple
 - b) Increase ripple
 - c) Does not change the ripple
 - d) None of these
- 2) Load current in half-wave rectifier with filter capacitor flows for
 - a) Both half-cycles of input
 - b) One half-cycle
 - c) Less than half cycle
 - d) None of these
- 3) The ripple frequency in a full-wave rectifier is
 - a) Double the input frequency
 - b) Equal to the input frequency
 - c) Half the input frequency
 - d) None of these
- 4) The forward resistance of an ideal rectifier diode should be
 - a) Infinity
 - b) Negative
 - c) Zero
 - d) None of these
- 5) The reverse saturation current with increasing reverse bias
 - a) Increases
 - b) Decreases
 - c) Remains constant
 - d) Zero

P.T.O.

- 6) Improper location of Q point leads to _____ of transistor amplifier.
- a) Distortion in input
 - b) Distortion in output
 - c) Heavy loading
 - d) None of these
- 7) The h-parameter of BJT are called
- a) Large signal parameters
 - b) Small signal parameters
 - c) T-parameters
 - d) z-parameters
- 8) Low frequency response of BJT amplifier depends on
- a) Input resistance
 - b) Output resistance
 - c) Both i/p and o/p resistance
 - d) None of these
- 9) JFET can be used as an _____ ohmic region.
- a) Oscillator
 - b) Clock generator
 - c) Flip-flop
 - d) Resistor
- 10) Power dissipated in transistor amplifier depends on
- a) V_{cc}
 - b) R_e
 - c) V_{ce} and I_c
 - d) None
- 11) In voltage regulator using zener, the output voltage depends on
- a) V_{in}
 - b) V_z
 - c) R_L
 - d) All of these
- 12) Common base configuration in BJT provides
- a) Unity current gain
 - b) Unity voltage gain
 - c) Both (a) and (b)
 - d) None of these
- 13) In any circuit Zener diode is
- a) Acts as regulator after reverse breakdown
 - b) Acting as regulator in forward bias
 - c) A very fast photo diode
 - d) Introduce a dc voltage depends on thermally generated minority carriers
- 14) Ripple voltage increases in shunt capacitor filter with
- a) Decreasing load current
 - b) Increasing load current
 - c) Zero load current
 - d) None of these
-

Day and Date : Thursday, 15-12-2016

Marks : 56

Time : 10.00 a.m. to 1.00 p.m.

SECTION – I

2. Solve **any four** : **(3.5×4=14)**

- Explain ratings for PN junction diode in detail.
- Explain with diagram voltage tripler.
- Derive expression for ripple factor of LC filter.
- Derive expression for zener regulator for variable input voltage and fixed load resistance.
- Explain the operation of the circuit shown below. Draw input and output waveforms and transfer characteristics. Assume $V_i = 6 \sin \omega t$, $V_d = 0$, $V = 3V$.

3. Attempt **any two** : **(7×2=14)**

- Explain types of shunt clipper circuits and shunt clampers with transfer characteristics.
- Draw circuit diagram of full wave rectifier with C filter and explain its working. Derive expression of ripple factor of C filter.
- Design voltage source using full wave bridge rectifier with inductor filter for ripple factor of 10% and V_{dc} of 11 V and I_{dc} of 100 mA. Line frequency is 50 Hz.

SECTION – II

4. Solve **any four** : **(3.5×4=14)**
- a) Compare BJT transistor and FET with respect to different parameters.
 - b) Derive equation for stability factor for voltage divider bias circuit.
 - c) Explain stability in transistor amplifier and compare amplifier with different biasing.
 - d) Explain types of MOSFET with output transfer characteristics.
 - e) Define significance of hybrid parameters in amplifier analysis.
5. Solve **any two** : **(7×2=14)**
- a) Explain frequency response of transistor amplifier. Derive expression for lower and higher cutoff frequencies.
 - b) Explain following terms :
 - 1) Early effect
 - 2) Thermal runaway
 - 3) Relation between α and β .
 - c) Derive expression A_{vs} , A_{is} , R_i , R_o for transistor amplifier using voltage divider bias with emitter bypass capacitor.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

(1×14=14)

- 1) A Network has 7 nodes and 5 independent loops the number of branches in the networks is
 - a) 10
 - b) 11
 - c) 12
 - d) 13
- 2) The current source transformation of following circuit between AB will be parallel combination of

- a) 5A, 3 Ω
 - b) 5A, 2 Ω
 - c) -5A, 6 Ω
 - d) -5A, 2 Ω
- 3) Superposition theorem is not valid for
 - a) Current responses
 - b) Voltage responses
 - c) Power responses
 - d) Both a & b
 - 4) In a series resonant circuit, $V_c = 100V$, $V_L = 100V$ and $V_R = 75V$, what is the value of source voltage ?
 - a) 100 V
 - b) 150 V
 - c) 0 V
 - d) 75 V
 - 5) For a given value of Q and Resonant frequency f_r , bandwidth is given by
 - a) f_r/Q
 - b) $f_r \times Q$
 - c) Q/f_r
 - d) None of the above
 - 6) Which parameters are widely used in transmission line theory ?
 - a) Z
 - b) Y
 - c) h
 - d) ABCD
 - 7) For a two port bilateral network, the three transmission line parameters are given by $A = 6/5$, $B = 17/5$ and $C = 1/5$, what is the value of D ?
 - a) 1
 - b) 7/5
 - c) 1/5
 - d) 5/7

P.T.O.

- 8) The transfer impedance is defined as
- The ratio of transform voltage to transform current at the same port
 - The ratio of transform voltage at one port to transform current at the other port
 - Both a & b
 - None of the above
- 9) The necessary condition for driving point function is
- The real part of all poles and zero must not be negative
 - The polynomials $P(s)$ and $Q(s)$ may not have any missing terms between the highest and lowest degree unless all even or all odds terms are missing
 - The degree of $P(s)$ and $Q(s)$ may differ by more than one
 - The lowest degree of $P(s)$ and $Q(s)$ may differ in degree by more than two
- 10) When a series RL circuit is connected to voltage source v at $t = 0$, the current passing through the inductor L at $t = 0$ is
- $\frac{V}{R}$
 - infinite
 - zero
 - $\frac{V}{L}$
- 11) For the circuit shown current in the $10\ \Omega$ resistance when the switch is changed from 1 to 2 is

- $5e^{20t}$
 - $5e^{-20t}$
 - $20e^{5t}$
 - $20e^{-5t}$
- 12) The transient current in loss free LC circuit when excited from AC source is an _____ sine wave.
- un damped
 - over damped
 - under damped
 - critically damped
- 13) The propagation constant of symmetrical T-network is
- $\cos(Y) = 1 + Z_1/2Z_2$
 - $\cosh(Y) = 1 + Z_1/2Z_2$
 - $\cosh(Y) = 1 + Z_1/4Z_2$
 - $\cosh(Y) = 1 + Z_1/Z_2$
- 14) In the M-derived low pass filter the resonant frequency is to be chosen so that it is
- Above cut-off frequency
 - Below cut-off frequency
 - Equal to cut-off frequency
 - None of the above

S.E. (E&TC) (Part – I) (CGPA) Examination, 2016
CIRCUITS AND NETWORKS

Day and Date : Saturday, 17-12-2016

Marks :56

Time : 10.00 a.m. to 1.00 p.m.

SECTION – I

2. Answer **any four** of the following.

(4×4=16)

1) Using superposition principle, determine the value of V in the circuit shown below

2) Draw the Norton's equivalent circuit for the network shown and hence find the current I

Set P

- 3) Derive an expression for resonant frequency for Parallel RLC circuit and hence find the resonant frequency for the circuit shown below.

- 4) Find Z parameter of the pi network shown below.

- 5) Determine h-parameters of the network.

3. Answer **any two** of the following.

(2×6=12)

- 1) In the network shown two voltage sources act on a load impedance connected to the terminal a & b. If this load is variable in both reactance and resistance, what load Z_L will receive the maximum power? What is the value of Maximum Power?

Set P

- 2) Derive the expression for maximum voltage across and inductor in series RLC circuit. Determine the Quality factor for the coil if $R = 10\ \Omega$, $L = 0.1\text{H}$ & $C = 10\ \mu\text{F}$ connected in series.
- 3) Determine the Z and h-parameters for the lattice network shown below.

SECTION – II

4. Solve **any four** :

(4×4=16)

- 1) Derive the expression for the resultant current for the circuit shown.

- 2) What is an attenuator ? State the necessity of it. Explain Lattice attenuator in detail.
- 3) Give the definition of poles and zero of the network and significance of pole and zero of the network function.
- 4) Design a band eliminate filter having a impedance of $500\ \Omega$ and cut -off frequency $F_1 = 1\text{KHz}$ and $F_2 = 5\text{ KHz}$ and also draw attenuation plot for band stop filter.
- 5) For the circuit shown, obtain the resultant when $V = 50 \cos (100 t + \phi)$ is applied to the circuit at $t = 0$. Where $\phi = 30^\circ$

5. Solve **any two** :

(2×6=12)

- 1) Plot the pole-zero for the following system. What is the condition for stability ? Comment on the stability of the system from its pole-zero plot.

i) $V(s) = \frac{4(s+2)s}{(s+1)(s+3)}$

ii) $I(s) = \frac{5s}{(s+1)(s^2+4s+8)}$

- 2) For the circuit, explain the transient response in RLC circuit with DC excitation. Also derive expression for $i(t)$, for the circuit given if $R = 5 \Omega$, $L = 1H$, $C = 1F$ and $V = 20V$ applied at $t = 0$.

- 3) Derive the expression for T-Type attenuator. Design a T-type pad attenuator to give an attenuation at 60 DB and to in line of 500Ω impedance.

SECTION – I

2. Answer **any four** of the following.

(4×4=16)

1) Using superposition principle, determine the value of V in the circuit shown below

2) Draw the Norton's equivalent circuit for the network shown and hence find the current I

Set R

- 3) Derive an expression for resonant frequency for Parallel RLC circuit and hence find the resonant frequency for the circuit shown below.

- 4) Find Z parameter of the pi network shown below.

- 5) Determine h-parameters of the network.

3. Answer **any two** of the following.

(2×6 = 12)

- 1) In the network shown two voltage sources act on a load impedance connected to the terminal a & b. If this load is variable in both reactance and resistance, what load Z_L will receive the maximum power? What is the value of Maximum Power?

Set R

- 2) Derive the expression for maximum voltage across and inductor in series RLC circuit. Determine the Quality factor for the coil if $R = 10 \Omega$, $L = 0.1H$ & $C = 10 \mu F$ connected in series.
- 3) Determine the Z and h-parameters for the lattice network shown below.

SECTION – II

4. Solve **any four** :

(4×4=16)

- 1) Derive the expression for the resultant current for the circuit shown.

- 2) What is an attenuator ? State the necessity of it. Explain Lattice attenuator in detail.
- 3) Give the definition of poles and zero of the network and significance of pole and zero of the network function.
- 4) Design a band eliminate filter having a impedance of 500Ω and cut -off frequency $F_1 = 1KHz$ and $F_2 = 5 KHz$ and also draw attenvation plot for band stop filter.
- 5) For the circuit shown, obtain the resultant when $V = 50 \cos (100 t + \phi)$ is applied to the circuit at $t = 0$. Where $\phi = 30^\circ$

5. Solve **any two** :

(2×6=12)

- 1) Plot the pole-zero for the following system. What is the condition for stability ? Comment on the stability of the system from its pole-zero plot.

i) $V(s) = \frac{4(s+2)s}{(s+1)(s+3)}$

ii) $I(s) = \frac{5s}{(s+1)(s^2+4s+8)}$

- 2) For the circuit, explain the transient response in RLC circuit with DC excitation. Also derive expression for $i(t)$, for the circuit given if $R = 5 \Omega$, $L = 1H$, $C = 1F$ and $V = 20V$ applied at $t = 0$.

- 3) Derive the expression for T-Type attenuator. Design a T-type pad attenuator to give an attenuation at 60 DB and to in line of 500Ω impedance.

S.E. (E&TC) (Part – I) (CGPA) Examination, 2016
CIRCUITS AND NETWORKS

Day and Date : Saturday, 17-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Total Marks : 70

- Instructions :**
- 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - 2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

(1×14=14)

- 1) When a series RL circuit is connected to voltage source v at $t = 0$, the current passing through the inductor L at $t = 0$ is

- a) $\frac{V}{R}$ b) infinite c) zero d) $\frac{V}{L}$

- 2) For the circuit shown current in the $10\ \Omega$ resistance when the switch is changed from 1 to 2 is

- a) $5e^{20t}$ b) $5e^{-20t}$ c) $20e^{5t}$ d) $20e^{-5t}$
- 3) The transient current in loss free LC circuit when excited from AC source is an _____ sine wave.
- a) un damped b) over damped
c) under damped d) critically damped
- 4) The propagation constant of symmetrical T-network is
- a) $\cos(Y) = 1 + Z_1/2Z_2$ b) $\cosh(Y) = 1 + Z_1/2Z_2$
c) $\cosh(Y) = 1 + Z_1/4Z_2$ d) $\cosh(Y) = 1 + Z_1/Z_2$
- 5) In the M-derived low pass filter the resonant frequency is to be choosen so that it is
- a) Above cut-off frequency b) Below cut-off frequency
c) Equal to cut-off frequency d) None of the above

P.T.O.

- 6) A Network has 7 nodes and 5 independent loops the number of branches in the networks is
 a) 10 b) 11 c) 12 d) 13
- 7) The current source transformation of following circuit between AB will be parallel combination of

- a) 5A, 3 Ω b) 5A, 2 Ω c) -5A, 6 Ω d) -5A, 2 Ω
- 8) Superposition theorem is not valid for
 a) Current responses b) Voltage responses
 c) Power responses d) Both a & b
- 9) In a series resonant circuit, $V_C = 100V$, $V_L = 100V$ and $V_R = 75V$, what is the value of source voltage ?
 a) 100 V b) 150 V c) 0 V d) 75 V
- 10) For a given value of Q and Resonant frequency f_r , bandwidth is given by
 a) f_r/Q b) $f_r \times Q$
 c) Q/f_r d) None of the above
- 11) Which parameters are widely used in transmission line theory ?
 a) Z b) Y c) h d) ABCD
- 12) For a two port bilateral network, the three transmission line parameters are given by $A = 6/5$, $B = 17/5$ and $C = 1/5$, what is the value of D ?
 a) 1 b) 7/5 c) 1/5 d) 5/7
- 13) The transfer impedance is defined as
 a) The ratio of transform voltage to transform current at the same port
 b) The ratio of transform voltage at one port to transform current at the other port
 c) Both a & b
 d) None of the above
- 14) The necessary condition for driving point function is
 a) The real part of all poles and zero must not be negative
 b) The polynomials $P(s)$ and $Q(s)$ may not have any missing terms between the highest and lowest degree unless all even or all odds terms are missing
 c) The degree of $P(s)$ and $Q(s)$ may differ by more than one
 d) The lowest degree of $P(s)$ and $Q(s)$ may differ in degree by more than two

S.E. (E&TC) (Part – I) (CGPA) Examination, 2016
CIRCUITS AND NETWORKS

Day and Date : Saturday, 17-12-2016

Marks :56

Time : 10.00 a.m. to 1.00 p.m.

SECTION – I

2. Answer **any four** of the following.

(4×4=16)

1) Using superposition principle, determine the value of V in the circuit shown below

2) Draw the Norton's equivalent circuit for the network shown and hence find the current I

Set S

- 3) Derive an expression for resonant frequency for Parallel RLC circuit and hence find the resonant frequency for the circuit shown below.

- 4) Find Z parameter of the pi network shown below.

- 5) Determine h-parameters of the network.

3. Answer **any two** of the following.

(2×6=12)

- 1) In the network shown two voltage sources act on a load impedance connected to the terminal a & b. If this load is variable in both reactance and resistance, what load Z_L will receive the maximum power? What is the value of Maximum Power?

Set S

- 2) Derive the expression for maximum voltage across and inductor in series RLC circuit. Determine the Quality factor for the coil if $R = 10\ \Omega$, $L = 0.1\text{H}$ & $C = 10\ \mu\text{F}$ connected in series.
- 3) Determine the Z and h-parameters for the lattice network shown below.

SECTION – II

4. Solve **any four** :

(4×4=16)

- 1) Derive the expression for the resultant current for the circuit shown.

- 2) What is an attenuator ? State the necessity of it. Explain Lattice attenuator in detail.
- 3) Give the definition of poles and zero of the network and significance of pole and zero of the network function.
- 4) Design a band eliminate filter having a impedance of $500\ \Omega$ and cut -off frequency $F_1 = 1\text{KHz}$ and $F_2 = 5\text{ KHz}$ and also draw attenuation plot for band stop filter.
- 5) For the circuit shown, obtain the resultant when $V = 50 \cos (100 t + \phi)$ is applied to the circuit at $t = 0$. Where $\phi = 30^\circ$

5. Solve **any two** :

(2×6=12)

- 1) Plot the pole-zero for the following system. What is the condition for stability ? Comment on the stability of the system from its pole-zero plot.

i) $V(s) = \frac{4(s+2)s}{(s+1)(s+3)}$

ii) $I(s) = \frac{5s}{(s+1)(s^2+4s+8)}$

- 2) For the circuit, explain the transient response in RLC circuit with DC excitation. Also derive expression for $i(t)$, for the circuit given if $R = 5 \Omega$, $L = 1H$, $C = 1F$ and $V = 20V$ applied at $t = 0$.

- 3) Derive the expression for T-Type attenuator. Design a T-type pad attenuator to give an attenuation at 60 DB and to in line of 500Ω impedance.

S.E. (E & TC) (Part – I) Examination, 2016
SUB-DIGITAL TECHNIQUES (CGPA Pattern)

Day and Date : Tuesday, 20-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Total Marks : 70

Instructions : 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

(14×1=14)

- 1) Gray code is
 - a) Non weighted code
 - b) Cyclic code
 - c) Reflected code
 - d) All the above
- 2) A circuit that transforms decimal to binary code is
 - a) Multiplexer
 - b) Demultiplexer
 - c) Decoder
 - d) Encoder
- 3) A 7-segment LED display with common anode requires
 - a) BCD to 7-segment decoder with active-low outputs
 - b) BCD to 7-segment decoder with active-high outputs
 - c) Negative supply voltage for the anode
 - d) Positive supply voltage for the anode and BCD to 7-segment decoder with active-low output
- 4) In standard TTL gates, the totem-pole output stage is primarily used to
 - a) Increase the noise margin of the gate
 - b) Decrease the output switching delay
 - c) Facilitate a wired or logic connection
 - d) Increase the output impedance of the circuit
- 5) The number of stable states in one shot flip-flop is
 - a) 1
 - b) 2
 - c) 3
 - d) 4
- 6) What is the condition for race around problem ?
 - a) $J=K=1$
 - b) $\Delta t < t_p$
 - c) Both
 - d) None
- 7) The logic expression for $Y(A, B, C) = \sum m(0, 2, 3, 6)$ is equivalent to
 - a) $\sum m(1, 4, 5, 7)$
 - b) $\pi M(0, 3, 5, 6, 7)$
 - c) $\sum m(1, 2, 4)$
 - d) None

P.T.O.

- 8) A divide by 20 Ring counter requires a minimum of
 - a) Twenty flip flops
 - b) Eight flip flops
 - c) Five flip flops
 - d) None of these
- 9) The initial content of 4-bit serial-in-parallel out, right shift, shift register shown in figure is 01 10. After three clock pulses are applied contents of shift register will be ?

- a) 0000 b) 0101 c) 1010 d) 1111
- 10) A 4-bit asynchronous counter uses flip-flop with propagation delay time of 25 ns each. The max possible time required for change of state will be
a) 25 ns b) 50 ns c) 75 ns d) 100 ns
- 11) A 4-bit presettable up counter has preset input 0101. The preset operation takes place as soon as counter becomes maximum 1111. The modulus of counter is
a) 5 b) 10 c) 11 d) 15
- 12) The minimum number of flip-flops required to generate a sequence of 11 bits is
a) 3 b) 4 c) 5 d) 2
- 13) State reduction gives
a) Reduction in number of flip-flops b) Number of flip-flop remain same
c) Either (a) or (b) d) None of these
- 14) In PLA
a) Both AND and OR matrix are programmable
b) AND array is fixed and OR is programmable
c) AND is programmable OR is fixed
d) None of the above

Seat No.

**S.E. (E & TC) (Part – I) Examination, 2016
SUB-DIGITAL TECHNIQUES (CGPA Pattern)**

Day and Date : Tuesday, 20-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 56

SECTION – I

2. Solve **any four** : **(4×4=16)**

- a) Reduce the following logical expression using K-map and implement reduced expression by using NAND gate.

$$F(A, B, C, D) = \pi M (1, 4, 6, 9, 10, 11, 14, 15)$$

- b) Implement 8 : 1 MUX by using 2 : 1 MUX.
c) Implement the following function using single 8 : 1 multiplexer

$$F(A, B, C, D) = \Sigma m(0, 3, 5, 6, 8, 9, 14, 15)$$

- d) Convert T flip flop into D flip-flop.
e) Draw and explain CMOS inverter.

3. Solve **any two** : **(2×6=12)**

- a) Minimize the following function using K-map & implement reduced expression using NOR gate.

$$F = A B \bar{C} D + \bar{A} B C + \bar{A} \bar{B} \bar{C} + \bar{A} \bar{B} D + A \bar{C} + A \bar{B} C + \bar{B} \bar{C} + \bar{C}$$

- b) Draw & Explain Subtractor using adder IC 7483 (Use 2's Complement Method).
c) Find out the characteristic equation of
i) S-R Flip flop ii) T Flip flop iii) J-K Flip flop

SECTION – II

4. Solve **any four** : **(4×4=16)**

- a) Draw the waveforms to shift data 1101 to left in serial out shift register.
b) Design MOD-5 asynchronous counter.
c) Design MOD-10 down counter using IC 74191.
d) Compare Moore & Mealy machines.
e) Draw the state diagram & give the state table for sequence detector which detects the sequence 1011.

Set P

5. Solve **any two** :

(2×6=12)

- Design a 3-bit synchronous up/down counter using J-K flip flop.
- Design a sequential circuit using D flip flop for the given state diagram.

- A combinational circuit having 2 outputs F & G are given by the Sum of Product expression as below

$$F = W \bar{Y} + X \bar{Y} Z$$

$$G = W \bar{X} \bar{Y} + \bar{X} Z + \bar{W} \bar{Y} Z$$

Where W, X, Y, Z are input to the system. Implement this circuit using PLA having no more than four product terms.

1. Choose the correct answer : **(14×1=14)**

- 1) A 4-bit asynchronous counter uses flip-flop with propagation delay time of 25 ns each. The max possible time required for change of state will be
a) 25 ns b) 50 ns c) 75 ns d) 100 ns
- 2) A 4-bit presettable up counter has preset input 0101. The preset operation takes place as soon as counter becomes maximum 1111. The modulus of counter is
a) 5 b) 10 c) 11 d) 15
- 3) The minimum number of flip-flops required to generate a sequence of 11 bits is
a) 3 b) 4 c) 5 d) 2
- 4) State reduction gives
a) Reduction in number of flip-flops b) Number of flip-flop remain same
c) Either (a) or (b) d) None of these
- 5) In PLA
a) Both AND and OR matrix are programmable
b) AND array is fixed and OR is programmable
c) AND is programmable OR is fixed
d) None of the above
- 6) Gray code is
a) Non weighted code b) Cyclic code
c) Reflected code d) All the above
- 7) A circuit that transforms decimal to binary code is
a) Multiplexer b) Demultiplexer c) Decoder d) Encoder

P.T.O.

- 8) A 7-segment LED display with common anode requires
- BCD to 7-segment decoder with active-low outputs
 - BCD to 7-segment decoder with active-high outputs
 - Negative supply voltage for the anode
 - Positive supply voltage for the anode and BCD to 7-segment decoder with active-low output
- 9) In standard TTL gates, the totem-pole output stage is primarily used to
- Increase the noise margin of the gate
 - Decrease the output switching delay
 - Facilitate a wired or logic connection
 - Increase the output impedance of the circuit
- 10) The number of stable states in one shot flip-flop is
- 1
 - 2
 - 3
 - 4
- 11) What is the condition for race around problem ?
- $J=K=1$
 - $\Delta t < t_p$
 - Both
 - None
- 12) The logic expression for $Y(A, B, C) = \sum m(0, 2, 3, 6)$ is equivalent to
- $\sum m(1, 4, 5, 7)$
 - $\pi M(0, 3, 5, 6, 7)$
 - $\sum m(1, 2, 4)$
 - None
- 13) A divide by 20 Ring counter requires a minimum of
- Twenty flip flops
 - Eight flip flops
 - Five flip flops
 - None of these
- 14) The initial content of 4-bit serial-in-parallel out, right shift, shift register shown in figure is 0110. After three clock pulses are applied contents of shift register will be ?

- 0000
- 0101
- 1010
- 1111

S.E. (E & TC) (Part – I) Examination, 2016
SUB-DIGITAL TECHNIQUES (CGPA Pattern)

Day and Date : Tuesday, 20-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 56

SECTION – I

2. Solve **any four** : **(4×4=16)**

- a) Reduce the following logical expression using K-map and implement reduced expression by using NAND gate.

$$F(A, B, C, D) = \pi M (1, 4, 6, 9, 10, 11, 14, 15)$$

- b) Implement 8 : 1 MUX by using 2 : 1 MUX.
c) Implement the following function using single 8 : 1 multiplexer

$$F(A, B, C, D) = \Sigma m(0, 3, 5, 6, 8, 9, 14, 15)$$

- d) Convert T flip flop into D flip-flop.
e) Draw and explain CMOS inverter.

3. Solve **any two** : **(2×6=12)**

- a) Minimize the following function using K-map & implement reduced expression using NOR gate.

$$F = A B \bar{C} D + \bar{A} B C + \bar{A} \bar{B} \bar{C} + \bar{A} \bar{B} D + A \bar{C} + A \bar{B} C + \bar{B} \bar{C} + \bar{C}$$

- b) Draw & Explain Subtractor using adder IC 7483 (Use 2's Complement Method).
c) Find out the characteristic equation of
i) S-R Flip flop ii) T Flip flop iii) J-K Flip flop

SECTION – II

4. Solve **any four** : **(4×4=16)**

- a) Draw the waveforms to shift data 1101 to left in serial out shift register.
b) Design MOD-5 asynchronous counter.
c) Design MOD-10 down counter using IC 74191.
d) Compare Moore & Mealy machines.
e) Draw the state diagram & give the state table for sequence detector which detects the sequence 1011.

Set S

5. Solve **any two** :

(2×6=12)

- Design a 3-bit synchronous up/down counter using J-K flip flop.
- Design a sequential circuit using D flip flop for the given state diagram.

- A combinational circuit having 2 outputs F & G are given by the Sum of Product expression as below

$$F = W \bar{Y} + X \bar{Y} Z$$

$$G = W \bar{X} \bar{Y} + \bar{X} Z + \bar{W} \bar{Y} Z$$

Where W, X, Y, Z are input to the system. Implement this circuit using PLA having no more than four product terms.

S.E. (E & TC) (Part – I) (CGPA Pattern) Examination, 2016
DATA STRUCTURES USING 'C'

Day and Date : Thursday, 22-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 70

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.

2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

(14×1=14)

- 1) In linked lists there are no NULL links in
 - a) Singly Linked List
 - b) Doubly Linked List
 - c) Circular Linked List
 - d) None of the above
- 2) Recursively the fib(5) is
 - a) 2
 - b) 3
 - c) 5
 - d) 8
- 3) Malloc () function is used to
 - a) To deallocate memory dynamically
 - b) To allocate memory statically
 - c) To deallocate memory statically
 - d) To allocate memory dynamically
- 4) Adding an element to the stack means
 - a) Placing an element at the front end
 - b) Placing an element at the top
 - c) Placing an element at the rear end
 - d) None of the above
- 5) The end from which an element gets removed from the queue is called
 - a) Front
 - b) Rear
 - c) Top
 - d) Bottom
- 6) _____ is the application of stack.
 - a) Execution of sub program
 - b) Conversion of infix to postfix
 - c) Both a), b)
 - d) None of the above

P.T.O.

- 7) Queue follows algorithm
a) FIFO b) LIFO c) RANDOM d) LILO
- 8) A hash function f defined as $f(\text{key}) = \text{key} \bmod 13$, with linear probing is used to insert keys 55, 58, 68, 91, 27, 145. What will be the location of 79 ?
a) 1 b) 2 c) 3 d) 5
- 9) Which of the following is not a limitation of binary search algorithm ?
a) must use a sorted array
b) requirement of sorted array is expensive when a lot of insertion and deletions are needed
c) there must be a mechanism to access middle element directly
d) binary search algorithm is not efficient when the data elements more than 1500
- 10) If the given input array is sorted or nearly sorted, which of the following algorithm gives the best performance ?
a) Insertion sort b) Selection sort c) Quick sort d) Merge sort
- 11) The running time of the following sorting algorithm depends on whether the partitioning is balanced or unbalanced
a) Insertion sort b) Selection sort c) Quick sort d) Merge sort
- 12) If the inorder and preorder traversal of a binary tree are D, B, F, E, G, H, A, C and A, B, D, E, F, G, H, C respectively then the postorder traversal of that tree is
a) D, F, G, A, B, C, H, E b) F, H, D, G, E, B, C, A
c) C, G, H, F, E, D, B, A d) D, F, H, G, E, B, C, A
- 13) Graph traversal is different from a tree traversal, because
a) trees are not connected
b) graphs may have loops
c) trees have root
d) None is true as tree is a subset of graph
- 14) A binary search tree in which the nodes have been inserted in the following order :
25, 15, 35, 10, 20, 30, 40. Which of the following is the result of a post order traversal of the original tree ?
a) 10 15 20 30 35 40 25 b) 25 15 10 20 35 30 40
c) 10 15 20 25 30 35 40 d) 40 35 30 25 20 15 10

**S.E. (E & TC) (Part – I) (CGPA Pattern) Examination, 2016
DATA STRUCTURES USING 'C'**

Day and Date : Thursday, 22-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 56

SECTION – I

2. Attempt **any four** questions : **(4×3=12)**

- 1) What is stack ? Write an algorithm of push operation of stack.
- 2) Write a note on Priority Queue.
- 3) Write a 'C' program to find the GCD of two numbers with recursive functions.
- 4) Define the function to check overflow and underflow condition of queue.
- 5) Explain doubly linked list with neat diagram.

3. Attempt **any one** question : **8**

- 1) Write the algorithm to convert infix expression to postfix expression. Convert the following infix expression into postfix expression. $(A+B \wedge D)/(E-F) + G$.
- 2) Explain singly linked list and write algorithm for following operation
 - a) Insert at specified location
 - b) Delete at end
 - c) Display list elements.

4. Attempt the question : **8**

Write a program to implement stack using array, with following functions:-
emptystack, fullstack, push, pop, display.

Set P

SECTION – II

5. Attempt **any four** questions : **(4×3=12)**

- 1) How to represent a graph using adjacency list ?
- 2) Explain insertion sort. Sort the following sequence in ascending order using insertion sort.

14, 33, 27, 10, 35, 19, 42, 44

- 3) Define Hashing. Explain following hash function with example.

a) Truncation b) Mid-square method.

- 4) Create a binary search tree from the following keys

50, 30, 60, 38, 35, 55, 22, 59, 94, 13, 98

- 5) Compare Binary Search with linear search.

6. Solve **any one** question : **8**

- 1) Explain quick sort. Sort the following sequence in ascending order using quick sort.

48, 44, 19, 59, 72, 80, 42, 65, 82, 8, 95, 68

- 2) What do you mean by hashing ? Explain different open addressing techniques to resolve collision in detail by giving suitable examples.

7. Explain graph traversal methods with examples. **8**

- 12) Queue follows algorithm
a) FIFO b) LIFO c) RANDOM d) LILO
- 13) A hash function f defined as $f(\text{key}) = \text{key} \bmod 13$, with linear probing is used to insert keys 55, 58, 68, 91, 27, 145. What will be the location of 79 ?
a) 1 b) 2 c) 3 d) 5
- 14) Which of the following is not a limitation of binary search algorithm ?
a) must use a sorted array
b) requirement of sorted array is expensive when a lot of insertion and deletions are needed
c) there must be a mechanism to access middle element directly
d) binary search algorithm is not efficient when the data elements more than 1500

**S.E. (E & TC) (Part – I) (CGPA Pattern) Examination, 2016
DATA STRUCTURES USING 'C'**

Day and Date : Thursday, 22-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 56

SECTION – I

2. Attempt **any four** questions : **(4×3=12)**

- 1) What is stack ? Write an algorithm of push operation of stack.
- 2) Write a note on Priority Queue.
- 3) Write a 'C' program to find the GCD of two numbers with recursive functions.
- 4) Define the function to check overflow and underflow condition of queue.
- 5) Explain doubly linked list with neat diagram.

3. Attempt **any one** question : **8**

- 1) Write the algorithm to convert infix expression to postfix expression. Convert the following infix expression into postfix expression. $(A+B \wedge D)/(E-F) + G$.
- 2) Explain singly linked list and write algorithm for following operation
 - a) Insert at specified location
 - b) Delete at end
 - c) Display list elements.

4. Attempt the question : **8**

Write a program to implement stack using array, with following functions:-
emptystack, fullstack, push, pop, display.

Set S

SECTION – II

5. Attempt **any four** questions : **(4×3=12)**

- 1) How to represent a graph using adjacency list ?
- 2) Explain insertion sort. Sort the following sequence in ascending order using insertion sort.

14, 33, 27, 10, 35, 19, 42, 44

- 3) Define Hashing. Explain following hash function with example.

a) Truncation b) Mid-square method.

- 4) Create a binary search tree from the following keys

50, 30, 60, 38, 35, 55, 22, 59, 94, 13, 98

- 5) Compare Binary Search with linear search.

6. Solve **any one** question : **8**

- 1) Explain quick sort. Sort the following sequence in ascending order using quick sort.

48, 44, 19, 59, 72, 80, 42, 65, 82, 8, 95, 68

- 2) What do you mean by hashing ? Explain different open addressing techniques to resolve collision in detail by giving suitable examples.

7. Explain graph traversal methods with examples. **8**

**S.E. (E & TC) (CGPA) (Part – II) Examination, 2016
ELECTRONIC CIRCUIT ANALYSIS & DESIGN – II**

Day and Date : Monday, 21-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Total Marks : 70

- Instructions :**
- 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - 2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
 - 3) Figures to the **right** indicates **full** marks.
 - 4) Assume suitable data **wherever** required.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct alternative :

(14×1=14)

- 1) The gain of an amplifier is expressed in db because
 - a) it is a simple unit
 - b) human ear response is good for logarithmic scale
 - c) calculations become easy
 - d) none of the above
- 2) Which one of the following is most suitable for generating 100Hz signal ?
 - a) Hartley oscillator
 - b) Copitts oscillator
 - c) Wein bridge oscillator
 - d) Crystal oscillator
- 3) For Wein bridge oscillator a variable capacitor with lower limit 47 pF and upper limit 470 pF is used what should be the value of fixed resistance required to provide upper frequency limits of 200 KHz ?
 - a) 16.92 K Ω
 - b) 20.92 K Ω
 - c) 30.92 K Ω
 - d) None of the above
- 4) _____ coupling is generally employed in power amplifiers.
 - a) Transformer
 - b) RC
 - c) Direct
 - d) Impedance
- 5) If a transistor is operated in such a way that output current flows for 60° of the input signal, then it is _____ operation.
 - a) class A
 - b) class B
 - c) class C
 - d) none of the above

P.T.O.

- 6) When emitter bypass capacitor is removed from RC coupled amplifier circuit it results to
- a) voltage series negative feedback b) voltage shunt negative feedback
c) current series negative feedback d) current shunt negative feedback
- 7) If the power rating of a transistor is 1 W and collector current is 100 mA, then maximum allowable collector voltage is
- a) 1 V b) 100 V c) 20 V d) 10 V
- 8) A three terminal monolithic IC regulator can be used as
- a) An adjustable O/P voltage regulator alone
b) An adjustable O/P voltage regulator and current regulator
c) As a current regulator and a power switch
d) As a current regulator alone
- 9) Pre regulator in voltage regulator acts as
- a) Reference voltage source b) Constant current source
c) Pre amplifier d) All above
- 10) The reference voltage and dropout voltage for fixed voltage regulator 7812 respectively are
- a) 2V, 9V b) 14V, 2V c) 12V, 2V d) 9V, 9V
- 11) Schmitt Trigger acts as a _____ multivibrator.
- a) Astable b) Monostable c) Bistable d) None
- 12) It is required to stretch a 5μ sec pulse to duration of 5msec. An appropriate circuit to be used for this is
- a) Monostable Multivibrator b) Astable Multivibrator
c) Schmitt Trigger d) Bistable Multivibrator
- 13) The Pin no. 1, 2, 3 for LM-337 are _____ respectively.
- a) V_{in} , V_{out} , I_{adj} b) I_{adj} , V_{in} , V_{out} c) I_{adj} , V_{out} , V_{in} d) V_{in} , I_{adj} , V_{out}
- 14) In a transistorized monostable multivibrator, quasi stable duration is
- a) $0.7RC$ b) $1.7RC$ c) $1.4RC$ d) none
-

**S.E. (E & TC) (CGPA) (Part – II) Examination, 2016
ELECTRONIC CIRCUIT ANALYSIS & DESIGN – II**

Day and Date : Monday, 21-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 56

Instructions : 1) Figures to the **right** indicates **full** marks.
2) Assume suitable data **wherever** required.

SECTION – I

2. Solve **any four**. **(4×4=16)**

- a) What is negative feedback ? State merits and demerits of negative feedback.
- b) With suitable circuit diagram explain the complementary symmetry power amplifier circuit.
- c) Explain low frequency response of three stage RC coupled amplifier circuit.
- d) For RC phase shift oscillator $R_L = 3.3 \text{ K}\Omega$, $R = 5.6 \text{ K}\Omega$, $C = 0.01 \text{ Mf}$. Calculate frequency of oscillations and minimum current gain required for sustained oscillations.
- e) An amplifier has a mid band gain of 500, $F_1 = 50 \text{ HZ}$, $F_2 = 50 \text{ KHZ}$. If 1% of negative feedback is introduced, calculate gain and bandwidth with feedback.

3. Solve the following. **(2×6=12)**

- a) Design RC phase shift oscillator for O/P frequency 5 KHz using transistor. Transistor used is having following specifications - $h_{fe} = 150$, $h_{ie} = 2\text{k}$, $V_{CE \text{ max}} = 45 \text{ V}$, Stability factor = 3, $V_{BE} = 0.6\text{V}$.
- b) Draw circuit diagram of two stage RC coupled amplifier and calculate R_i , R_o , A_i , A_v . What is the effect of source resistance on these parameters ?

OR

- b) List the limitations of single ended class A power amplifier. With suitable circuit diagram explain push pull class A power amplifier.

Set P

SECTION – II

4. Answer **any four**. **(4×4=16)**

- a) Design adjustable voltage regulator for $V_o = 5$ to $20V$ at $I_o = 1A$ using LM-337.
- b) Design a circuit to turn ON LED for 15 seconds after applying trigger pulse, Initially the LED is in off condition.
- c) Explain Thermal shutdown concept in IC-regulator.
- d) Derive Expression for frequency of oscillation for transistorized Monostable multivibrator.
- e) Explain working of transistorized series voltage regulator with pre-regulator.

5. Answer **any two** : **(2×6=12)**

- a) Explain how schmitt trigger can be used as a bistable multivibrator. What are the different methods of triggering ?
- b) Design a circuit to switch the system ON-OFF repeatedly for varying ON/OFF period as follows.
 - i) ON time variation = 1.5 msec to 3.5msec
 - ii) Off Time variation = 1msec to 2 msec

system draws a current of 1 amps from 240 V mains.

Use proper IC – (Use proper IC to drive relay of 12V, 30Ω)

- c) Design a transistorized series voltage regulator for 24 V at 1.5 A, At $V_{in} = 30 V$ (Assume necessary data).

Marks : 56

Instructions : 1) Figures to the **right** indicates **full** marks.
2) Assume suitable data **wherever** required.

SECTION – I

2. Solve **any four**. **(4×4=16)**

- a) What is negative feedback ? State merits and demerits of negative feedback.
- b) With suitable circuit diagram explain the complementary symmetry power amplifier circuit.
- c) Explain low frequency response of three stage RC coupled amplifier circuit.
- d) For RC phase shift oscillator $R_L = 3.3 \text{ K}\Omega$, $R = 5.6 \text{ K}\Omega$, $C = 0.01 \text{ Mf}$. Calculate frequency of oscillations and minimum current gain required for sustained oscillations.
- e) An amplifier has a mid band gain of 500, $F_1 = 50 \text{ HZ}$, $F_2 = 50 \text{ KHZ}$. If 1% of negative feedback is introduced, calculate gain and bandwidth with feedback.

3. Solve the following. **(2×6=12)**

- a) Design RC phase shift oscillator for O/P frequency 5 KHz using transistor. Transistor used is having following specifications - $h_{fe} = 150$, $h_{ie} = 2\text{k}$, $V_{CE \text{ max}} = 45 \text{ V}$, Stability factor = 3, $V_{BE} = 0.6\text{V}$.
- b) Draw circuit diagram of two stage RC coupled amplifier and calculate R_i , R_o , A_i , A_v . What is the effect of source resistance on these parameters ?

OR

- b) List the limitations of single ended class A power amplifier. With suitable circuit diagram explain push pull class A power amplifier.

Set S

SECTION – II

4. Answer **any four**. **(4×4=16)**

- a) Design adjustable voltage regulator for $V_o = 5$ to $20V$ at $I_o = 1A$ using LM-337.
- b) Design a circuit to turn ON LED for 15 seconds after applying trigger pulse, Initially the LED is in off condition.
- c) Explain Thermal shutdown concept in IC-regulator.
- d) Derive Expression for frequency of oscillation for transistorized Monostable multivibrator.
- e) Explain working of transistorized series voltage regulator with pre-regulator.

5. Answer **any two** : **(2×6=12)**

- a) Explain how schmitt trigger can be used as a bistable multivibrator. What are the different methods of triggering ?
- b) Design a circuit to switch the system ON-OFF repeatedly for varying ON/OFF period as follows.
 - i) ON time variation = 1.5 msec to 3.5msec
 - ii) Off Time variation = 1msec to 2 msec

system draws a current of 1 amps from 240 V mains.

Use proper IC – (Use proper IC to drive relay of 12V, 30Ω)

- c) Design a transistorized series voltage regulator for 24 V at 1.5 A, At $V_{in} = 30 V$ (Assume necessary data).

**S.E. (Electronics and Telecommunication) (Part – II)
(CGPA) Examination, 2016
ANALOG COMMUNICATION**

Day and Date : Tuesday, 22-11-2016

Max. Marks : 70

Time : 3.00 p.m. to 6.00 p.m.

- Instructions :**
- 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. Each question carries **one** mark.
 - 2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
 - 3) **All questions are compulsory.**
 - 4) Assume **suitable** data if necessary.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

(14×1=14)

- 1) In a communication receiver, the noise is most likely to affect the signal
 - a) at the transmitter
 - b) in the channel
 - c) in the information source
 - d) at the destination
- 2) What is the ratio of modulating power to total power at 100% modulation ?
 - a) 1 : 3
 - b) 1 : 2
 - c) 2 : 3
 - d) 3 : 2
- 3) Vestigial sideband modulation is used for transmission of
 - a) HF point to point communication
 - b) Monaural broadcasting
 - c) TV broadcasting
 - d) Stereo broadcasting
- 4) The image frequency of a superheterodyne receiver
 - a) is created within the receiver itself
 - b) is due to insufficient adjacent channel rejection
 - c) is not rejected by the IF tuned circuits
 - d) is independent of the frequency to which the receiver is tuned
- 5) A carrier is simultaneously modulated by two sine waves with modulation indices of 0.3 and 0.4. If carrier power is 10 kW, then total modulated power will be
 - a) 12.5 kW
 - b) 10 kW
 - c) 11.25 kW
 - d) 10.5 kW

P.T.O.

- 6) Flicker noise is
a) inversely proportional to frequency
b) directly proportional to frequency
c) independent of frequency
d) is constant over all frequencies
- 7) Perfect modulation occurs when
a) $V_m > V_c$ b) $V_m < V_c$ c) $V_m = V_c$ d) $V_m = V_c = 0$
- 8) In the generation of modulated signal, a varactor diode can be used
a) FM generation only b) AM generation only
c) PM generation only d) Both b) and c)
- 9) In FM sound broadcasting system, the maximum frequency deviation is usually
a) 15 kHz b) 75 kHz c) 100 kHz d) 5.2 MHz
- 10) Good selectivity usually means _____ Bandwidth.
a) Wide b) Narrow c) Phase d) None of these
- 11) In FM for a given frequency deviation the modulation index varies
a) inversely as the modulating frequency
b) directly as the modulating frequency
c) independent of the changes in modulating signal
d) none of the above
- 12) Ground waves have the following characteristic
a) Progress along the surface of earth
b) Must be vertically polarized
c) Lies down and dies at some distance from the antenna
d) All of the above
- 13) A folded dipole consists of
a) Single element b) Two elements
c) Four elements d) Three elements
- 14) A busy tone in a telephone system has a frequency of
a) Bursty 400 Hz b) Continuous 400 Hz
c) Bursty 133 Hz d) Continuous 133 Hz

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

14

- 1) The viscous friction coefficient, in force-voltage analogy, is analogous to
 - a) Charge
 - b) Resistance
 - c) Reciprocal of inductance
 - d) Reciprocal of conductance
- 2) The type 1 system has _____ at the origin.
 - a) No pole
 - b) No zero
 - c) Simple pole
 - d) Two poles
- 3) The equation $2S^4 + S^3 + 3S^2 + 5S + 10 = 0$ has _____ roots in the right half of S-plane.
 - a) One
 - b) Two
 - c) Three
 - d) Four
- 4) The damping ratio of a system having the characteristic equation $S^2 + 2S + 8 = 0$ is
 - a) 0.353
 - b) 0.330
 - c) 0.300
 - d) 0.250
- 5) If the transfer function of a first-order system is $G(S) = \frac{10}{1 + 2S}$, then the time-constant of the system is
 - a) 10 seconds
 - b) $\frac{1}{10}$ seconds
 - c) 2 seconds
 - d) $\frac{1}{2}$ seconds
- 6) The steady-state error of a feedback control system with an acceleration input becomes finite in a
 - a) Type 0 system
 - b) Type 1 system
 - c) Type 2 system
 - d) type 3 system

P.T.O.

7) The transfer function of the signal flow graph shown below is

- a) 1 b) 9 c) 8 d) 12
- 8) The starting point of root loci are the location of pole when $K =$
 a) 0 b) 1 c) ∞ d) $-\infty$
- 9) Settling time for 2% tolerance is
 a) $\frac{4}{\delta w_n}$ b) $\frac{3}{\delta w_n}$ c) $\frac{2}{\delta w_n}$ d) $\frac{1}{\delta w_r}$
- 10) Lag compensator reduces
 a) Bandwidth b) Rise time
 c) Transient response d) All of the above
- 11) The phase cross over frequency is the point on frequency axis of the system at which the phase of $G(j\omega)$ is at
 a) -90° b) -180° c) -270° d) -360°
- 12) For $G(S) = \frac{K}{S(S+1)(S+2)(S+3)}$, the number of asymptotes are
 a) 1 b) 2 c) 3 d) 4
- 13) In I order system, when unit input is applied, the response having maximum value _____ at $t \rightarrow \infty$.
 a) Zero b) Unity c) Infinity d) None of these
- 14) $f(t) = A \cdot \delta(t)$ in this equation 'A' stands for
 a) Function in time domain b) Function strength
 c) Deviation in time domain d) All of the above

CONTROL SYSTEMS

Day and Date : Wednesday, 23-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 56

Instructions: 1) **Assume** suitable data **wherever** necessary.
2) Figures to the **right** indicate **full** marks.

SECTION – I

2. Solve **any four** : **(4×4=16)**

- a) Explain with neat diagram liquid level control system.
- b) Find the transfer function of RLC series circuit.
- c) Classify the control systems.
- d) Explain special cases in Routh's criterion.
- e) Explain the procedure of block diagram reduction technique.

3. a) Find the stability of a system having characteristic equation $S^6 + 2S^5 + 7S^4 + 10S^3 + 14S^2 + 8S + 8 = 0$. **6**

b) Solve **any one** : **6**

- i) Find the transfer function of the following signal flow graph.

ii) Define the following :

- | | |
|--------------|------------------------|
| 1) Path | 2) Forward path |
| 3) Loop | 4) Loop gain |
| 5) Path gain | 6) Non-touching loops. |

Set P

SECTION – II

4. Solve **any four** : **(4×4=16)**

- a) Derive the response of I order system to unit step input.
- b) Explain lead lag compensator.
- c) In frequency response using Bode plot, the slope 6 db/octave and the slope 20 db/decade are one and the same why ?
- d) Explain how centroid and breakaway points are calculated in root locus.
- e) Explain the effect of lead compensator and also give limitations of lead compensator.

5. Solve **any two** : **(6×2=12)**

- a) Sketch the root locus for the system :

$$G(S) \cdot H(S) = \frac{K(S + 2)}{S(S + 3)(S + 4)}.$$

- b) Determine the error constant for

$$G \cdot H = \frac{64(S + 2)}{S(S + 0.5)(S^2 + 3.2S + 64)}.$$

- c) Draw the asymptotic Bode plot for feedback control system having

$$G(S) \cdot H(S) = \frac{20}{S \left(1 + \frac{S}{4}\right) \left(1 + \frac{S}{40}\right)} \text{ and comment on stability.}$$

S.E. (E&TC) (Part – II) (CGPA) Examination, 2016
CONTROL SYSTEMS

Day and Date : Wednesday, 23-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 70

- Instructions :**
- 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - 2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
 - 3) **Assume** suitable data **wherever** necessary.
 - 4) Figures to the **right** indicate **full** marks.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

14

- 1) The starting point of root loci are the location of pole when $K =$
a) 0 b) 1 c) ∞ d) $-\infty$
- 2) Settling time for 2% tolerance is
a) $\frac{4}{\delta \omega_n}$ b) $\frac{3}{\delta \omega_n}$ c) $\frac{2}{\delta \omega_n}$ d) $\frac{1}{\delta \omega_r}$
- 3) Lag compensator reduces
a) Bandwidth b) Rise time
c) Transient response d) All of the above
- 4) The phase cross over frequency is the point on frequency axis of the system at which the phase of $G(j\omega)$ is at
a) -90° b) -180°
c) -270° d) -360°
- 5) For $G(S) = \frac{K}{S(S+1)(S+2)(S+3)}$, the number of asymptotes are
a) 1 b) 2 c) 3 d) 4
- 6) In I order system, when unit input is applied, the response having maximum value _____ at $t \rightarrow \infty$.
a) Zero b) Unity
c) Infinity d) None of these

- 7) $f(t) = A \cdot \delta(t)$ in this equation 'A' stands for
 a) Function in time domain b) Function strength
 c) Deviation in time domain d) All of the above
- 8) The viscous friction coefficient, in force-voltage analogy, is analogous to
 a) Charge b) Resistance
 c) Reciprocal of inductance d) Reciprocal of conductance
- 9) The type 1 system has _____ at the origin.
 a) No pole b) No zero
 c) Simple pole d) Two poles
- 10) The equation $2S^4 + S^3 + 3S^2 + 5S + 10 = 0$ has _____ roots in the right half of S-plane.
 a) One b) Two c) Three d) Four
- 11) The damping ratio of a system having the characteristic equation $S^2 + 2S + 8 = 0$ is
 a) 0.353 b) 0.330 c) 0.300 d) 0.250
- 12) If the transfer function of a first-order system is $G(S) = \frac{10}{1 + 2S}$, then the time-constant of the system is
 a) 10 seconds b) $\frac{1}{10}$ seconds c) 2 seconds d) $\frac{1}{2}$ seconds
- 13) The steady-state error of a feedback control system with an acceleration input becomes finite in a
 a) Type 0 system b) Type 1 system
 c) Type 2 system d) type 3 system
- 14) The transfer function of the signal flow graph shown below is

- a) 1 b) 9 c) 8 d) 12

S.E. (E&TC) (Part – II) (CGPA) Examination, 2016
CONTROL SYSTEMS

Day and Date : Wednesday, 23-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 56

Instructions: 1) **Assume** suitable data **wherever** necessary.
2) Figures to the **right** indicate **full** marks.

SECTION – I

2. Solve **any four** : (4×4=16)

- a) Explain with neat diagram liquid level control system.
- b) Find the transfer function of RLC series circuit.
- c) Classify the control systems.
- d) Explain special cases in Routh's criterion.
- e) Explain the procedure of block diagram reduction technique.

3. a) Find the stability of a system having characteristic equation
 $S^6 + 2S^5 + 7S^4 + 10S^3 + 14S^2 + 8S + 8 = 0$.

6

b) Solve **any one** :

6

i) Find the transfer function of the following signal flow graph.

ii) Define the following :

- | | |
|--------------|------------------------|
| 1) Path | 2) Forward path |
| 3) Loop | 4) Loop gain |
| 5) Path gain | 6) Non-touching loops. |

Set Q

SECTION – II

4. Solve **any four** : **(4×4=16)**

- a) Derive the response of I order system to unit step input.
- b) Explain lead lag compensator.
- c) In frequency response using Bode plot, the slope 6 db/octave and the slope 20 db/decade are one and the same why ?
- d) Explain how centroid and breakaway points are calculated in root locus.
- e) Explain the effect of lead compensator and also give limitations of lead compensator.

5. Solve **any two** : **(6×2=12)**

- a) Sketch the root locus for the system :

$$G(S) \cdot H(S) = \frac{K(S + 2)}{S(S + 3)(S + 4)}.$$

- b) Determine the error constant for

$$G \cdot H = \frac{64(S + 2)}{S(S + 0.5)(S^2 + 3.2S + 64)}.$$

- c) Draw the asymptotic Bode plot for feedback control system having

$$G(S) \cdot H(S) = \frac{20}{S \left(1 + \frac{S}{4}\right) \left(1 + \frac{S}{40}\right)} \text{ and comment on stability.}$$

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

(1×14=14)

- 1) $R_{if} = R_i(1 + AB)$ represents
 - a) Input resistance of non-inverting amplifier
 - b) Input resistance of inverting amplifier
 - c) Open loop i/p resistance
 - d) None of these
- 2) $A(R_1 + R_f)/(R_1 + R_f + AR_1)$ represents
 - a) Exact voltage gain of non-inverting amplifier
 - b) Exact voltage gain of inverting amplifier
 - c) Ideal voltage gain of inverting amplifier
 - d) None
- 3) Gain limiting frequency of a differentiator is given by
 - a) $1/2 \pi R_f C_1$
 - b) $1/2 \pi R_1 C_1$
 - c) $1/2 \pi R_1 C_f$
 - d) $1/2 \pi R_f C_f$
- 4) Slew rate of op-amp is considered for
 - a) AC application
 - b) DC application
 - c) Both a) and b)
 - d) None

P.T.O.

- 5) What is the value of CMRR of IC741 ?
a) 500 nA b) 6 mV c) 90 d) 90 dB
- 6) Which of the following circuit is used as Diode match finder circuit ?
a) Voltage follower b) Inverter
c) Current series feedback amplifier d) None
- 7) Which of the following is important in deciding the gain of the op-amp ?
a) DIUO b) DIBO
c) Level shifting stage d) Output stage
- 8) Which of the below application can be realized in open loop configuration of Op-amp ?
a) Schmitt trigger b) Peak Detector
c) Zero Crossing Detector d) None
- 9) A duty cycle is _____ in saw tooth wave generator.
a) 90% b) 66%
c) Other than 50% d) 20%
- 10) Analog multiplier are available as
a) One quadrant b) Two quadrant
c) Four quadrant d) All of the above
- 11) IC 8038 is used to generate
a) Sine wave b) Square wave
c) Triangular wave d) All of the above
- 12) Schmitt trigger circuit is also called as
a) Square wave generator b) Squaring circuit
c) Sine wave generator d) None of these
- 13) Butterworth filter is also known as _____ filter.
a) Flat-flat b) Ripple-flat
c) Flat-ripple d) Ripple-ripple
- 14) Which one is sinusoidal oscillator ?
a) Wein bridge b) Phase shift
c) Quadrature d) All of the above

(Part – II) (CGPA) Examination, 2016
LINEAR INTEGRATED CIRCUITS

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 56

- Instructions :** 1) **All questions are compulsory.**
2) Assume suitable data if **necessary.**
3) Figure to the **right** indicates **full marks.**

SECTION – I

2. Solve **any four** : (4×4=16)

- Design the voltage series feedback amplifier using op-amp IC 741 for the gain between 5 to 10.
- Draw and explain frequency response of IC 741.
- Explain constant current bias circuit.
- Derive output voltage equation for 3 input non-inverting summing amplifier.
- Derive open loop voltage gain equation as a function of frequency.

3. Solve **any two** : (6×2=12)

- Derive output voltage equation for the following circuit and proper name to the circuit.

- Explain universal balancing technique.
- Compare open loop and closed loop configuration of op-amp. Explain differential amplifier with two op-amp.

Set Q

SECTION – II

4. Attempt **any four** of the following : **(4 marks each)**
- a) Explain analog multiplier.
 - b) Write a short note on Schmitt trigger.
 - c) Draw and explain peak detector using op-amp.
 - d) Draw and explain 1st order low pass butter-worth filter.
 - e) Explain half wave precision rectifier with waveforms.
5. Attempt **any two** of the following : **(6 marks each)**
- a) Draw and explain Wein bridge oscillator.
 - b) Explain functional diagram of IC 8308.
 - c) Draw and explain square wave generator in detail.
-

Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 70

- Instructions:**
- 1) **All questions are compulsory.**
 - 2) Assume suitable data if **necessary.**
 - 3) Figure to the **right** indicates **full** marks.
 - 4) Q. No. **1** is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. **3**. **Each** question carries **one** mark.
 - 5) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer : **(1×14=14)**

- 1) What is the value of CMRR of IC741 ?
a) 500 nA b) 6 mV c) 90 d) 90 dB
- 2) Which of the following circuit is used as Diode match finder circuit ?
a) Voltage follower b) Inverter
c) Current series feedback amplifier d) None
- 3) Which of the following is important in deciding the gain of the op-amp ?
a) DIUO b) DIBO
c) Level shifting stage d) Output stage
- 4) Which of the below application can be realized in open loop configuration of Op-amp ?
a) Schmitt trigger b) Peak Detector
c) Zero Crossing Detector d) None
- 5) A duty cycle is _____ in saw tooth wave generator.
a) 90% b) 66%
c) Other than 50% d) 20%

P.T.O.

- 6) Analog multiplier are available as
- a) One quadrant
 - b) Two quadrant
 - c) Four quadrant
 - d) All of the above
- 7) IC 8038 is used to generate
- a) Sine wave
 - b) Square wave
 - c) Triangular wave
 - d) All of the above
- 8) Schmitt trigger circuit is also called as
- a) Square wave generator
 - b) Squaring circuit
 - c) Sine wave generator
 - d) None of these
- 9) Butterworth filter is also known as _____ filter.
- a) Flat-flat
 - b) Ripple-flat
 - c) Flat-ripple
 - d) Ripple-ripple
- 10) Which one is sinusoidal oscillator ?
- a) Wein bridge
 - b) Phase shift
 - c) Quadrature
 - d) All of the above
- 11) $R_{if} = R_i(1 + AB)$ represents
- a) Input resistance of non-inverting amplifier
 - b) Input resistance of inverting amplifier
 - c) Open loop i/p resistance
 - d) None of these
- 12) $A(R_1 + R_f)/(R_1 + R_f + AR_1)$ represents
- a) Exact voltage gain of non-inverting amplifier
 - b) Exact voltage gain of inverting amplifier
 - c) Ideal voltage gain of inverting amplifier
 - d) None
- 13) Gain limiting frequency of a differentiator is given by
- a) $1/2 \pi R_f C_1$
 - b) $1/2 \pi R_1 C_1$
 - c) $1/2 \pi R_1 C_f$
 - d) $1/2 \pi R_f C_f$
- 14) Slew rate of op-amp is considered for
- a) AC application
 - b) DC application
 - c) Both a) and b)
 - d) None

Max. Marks : 70

- Instructions :** 1) *Q. No. 1 is compulsory. It should be solved in first 30 minutes in Answer Book Page No. 3. Each question carries one mark.*
2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
3) **All questions are compulsory.**
4) Assume **suitable** data if necessary.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

(1×14=14)

1) Which system is non causal system ?

- | | |
|----------------------|--------------------------|
| a) $y(t) = x(t + 1)$ | b) $y(t) = x(t - 1)$ |
| c) $y(t) = x(t) + c$ | d) $y(t) = x(t - 1) + c$ |

2) Identify the non periodic signal

- | | |
|----------------------------|------------------------------|
| a) $x(t) = \cos^2(t)$ | b) $x(t) = \cos 2\pi t u(t)$ |
| c) $x(t) = \sin (2\pi/3)t$ | d) $x(t) = \sin^2(t)$ |

3) Any signal $x(t)$ can be represented as

- | | |
|----------------------|--------------------------|
| a) $x_e(t) + x_o(t)$ | b) $x_e(t) - x_o(t)$ |
| c) $x_e(t)/x_o(t)$ | d) $x_e(t) \cdot x_o(t)$ |

4) Which property is not true for convolution integral ?

- | | |
|---|--|
| a) $\int_{-\infty}^{\infty} h(\tau) d\tau < \infty$ | b) $\int_{-\infty}^{\infty} h(\tau) d\tau > 0$ |
| c) $\int_{-\infty}^{\infty} h(\tau) d\tau < 0$ | d) $\int_{-\infty}^{\infty} h(\tau) d\tau = 1$ |

P.T.O.

- 5) Find the convolution of $x[n] = \{1, 2, 2\}$ $h[n] = \{1, 2\}$
a) $\{1, 2, 5, 6\}$ b) $\{0, 4, 3, 1\}$
c) $\{1, 4, 6, 4\}$ d) $\{4, 2, 3, 1\}$
- 6) Find the time period of $x(t) = \cos(50t)$
a) 25π b) 50 c) $\pi/2$ d) $\pi/25$
- 7) The following system is $y(t) = x(t - 2)$
a) Causal and Static b) Non causal and Static
c) Causal and Dynamic d) Non causal and Dynamic
- 8) For $x(n) = -u(-n - 1)$; then ROC is
a) $|z| > 1$ b) $|z| < 1$ c) $|z| > 0$ d) $|z| < 0$
- 9) When the system has poles inside the unit circle in Z-domain
a) The system is stable and its impulse response is a decaying function
b) Time domain behavior will be exponentially rising signal
c) The system is unstable
d) The impulse response is marginally constant
- 10) Aliasing occurs when a signal of band width W is sampled with sampling frequency F
a) Greater than W b) Less than W
c) Greater than 2 W d) Less than 2 W
- 11) The Fourier transform of $F(at)$ is given by
a) $f(at) \leftrightarrow aF(w)$ b) $f(at) \leftrightarrow (2/a)F(w)$
c) $f(at) \leftrightarrow (1/a)F(w/a)$ d) None of these
- 12) Sampling a signal is equivalent to multiplying it with
a) A sync function b) A train of impulse
c) A train of sync functions d) A rectangular window
- 13) Z transform reduces to Fourier transform when it is evaluated on
a) A half circle b) Z circle
c) Unit circle d) Imaginary circle
- 14) If $x(n)$ exists only for $-4 < n \leq 4$ then it is called as _____ sequence.
a) Bilateral b) Unilateral
c) Both a) and b) d) None

Examination, 2016
SIGNALS AND SYSTEMS

Day and Date : Friday, 25-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 56

Instructions : 1) **All questions are compulsory.**
2) Assume **suitable** data if necessary.

SECTION – I

2. Answer **any three**:

(3×4=12)

1) Sketch the following signal.

- a) $x(-t + 3)$
- b) $x(-2t - 3)$

2) Find even and odd component of the following signal.

Set P

- 3) Obtain Direct form – I realization for the system described by differential equation

$$\frac{d^2y(t)}{dt^2} - \frac{dy(t)}{dt} - 2y(t) = x(t) + \frac{d^2x(t)}{dt^2}.$$

- 4) Check for Linear or non linear and causal or non causal $y(t) = e^{x(t)}$.

3. Answer **any two** : (2×8=16)

- 1) Find the step response and also check the stability if the impulse response is $(e^{-2t})u(t)$.
- 2) Determine the following system is
 - a) Static/Dynamic
 - b) Linear/Non linear
 - c) Causal/Non Causal
 - d) Time Variant/Invariant
- 3) Find the convolution using graphical method $x[n] = \{1, 2, 3, 2\}$ $h(n) = \{1, 2, 2\}$

SECTION – II

4. Attempt **any three** : (3×4=12)

- 1) Explain the sampling theorem in detail and define aliasing effect.
- 2) The analog signal $m(t)$ is given as below
 $m(t) = 4 \cos(50 \pi t) + 8 \sin(300 \pi t) - \cos(100 \pi t)$ calculate Nyquist sampling rate.
- 3) Find Z transform with its ROC for $(n) = a^n \cdot u(n)$.
- 4) Obtain Fourier transform of $(t) = e^{at} \cdot u(t)$.

5. Attempt **any two** : (2×8=16)

- 1) Find the Fourier transform of $x(t) = e^{-a/t}$ where $a > 0$.
- 2) Determine the sequence $x(n)$ associated with Z. T given below using power series method. $X(z) = 1 + \frac{z^2 + z}{z^2 - 2z + 1}$; Right sided sequence.
- 3) Find Fourier series coefficient using trigonometric Fourier series method for the signal $x(t) = t$. The signal repeats after every 1 sec.

 - c) $|z| > 0$
 - d) $|z| < 0$
- 5) When the system has poles inside the unit circle in Z-domain
 - a) The system is stable and its impulse response is a decaying function
 - b) Time domain behavior will be exponentially rising signal
 - c) The system is unstable
 - d) The impulse response is marginally constant

P.T.O.

- 6) Aliasing occurs when a signal of band width W is sampled with sampling frequency F
 - a) Greater than W
 - b) Less than W
 - c) Greater than $2W$
 - d) Less than $2W$
- 7) The Fourier transform of $F(at)$ is given by
 - a) $f(at) \leftrightarrow aF(w)$
 - b) $f(at) \leftrightarrow (2/a)F(w)$
 - c) $f(at) \leftrightarrow (1/a)F(w/a)$
 - d) None of these
- 8) Sampling a signal is equivalent to multiplying it with
 - a) A sinc function
 - b) A train of impulse
 - c) A train of sinc functions
 - d) A rectangular window
- 9) Z transform reduces to Fourier transform when it is evaluated on
 - a) A half circle
 - b) Z circle
 - c) Unit circle
 - d) Imaginary circle
- 10) If $x(n)$ exists only for $-4 < n \leq 4$ then it is called as _____ sequence.
 - a) Bilateral
 - b) Unilateral
 - c) Both a) and b)
 - d) None
- 11) Which system is non causal system ?
 - a) $y(t) = x(t + 1)$
 - b) $y(t) = x(t - 1)$
 - c) $y(t) = x(t) + c$
 - d) $y(t) = x(t - 1) + c$
- 12) Identify the non periodic signal
 - a) $x(t) = \cos^2(t)$
 - b) $x(t) = \cos 2\pi t u(t)$
 - c) $x(t) = \sin(2\pi/3)t$
 - d) $x(t) = \sin^2(t)$
- 13) Any signal $x(t)$ can be represented as
 - a) $x_e(t) + x_o(t)$
 - b) $x_e(t) - x_o(t)$
 - c) $x_e(t)/x_o(t)$
 - d) $x_e(t) \cdot x_o(t)$
- 14) Which property is not true for convolution integral ?
 - a) $\int_{-\infty}^{\infty} |h(\tau)| d\tau < \infty$
 - b) $\int_{-\infty}^{\infty} |h(\tau)| d\tau > 0$
 - c) $\int_{-\infty}^{\infty} |h(\tau)| d\tau < 0$
 - d) $\int_{-\infty}^{\infty} |h(\tau)| d\tau = 1$

S.E. (Electronics and Telecommunication) (Part – II) (CGPA)
Examination, 2016
SIGNALS AND SYSTEMS

Day and Date : Friday, 25-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 56

Instructions : 1) **All questions are compulsory.**
2) Assume **suitable** data if necessary.

SECTION – I

2. Answer **any three** :

(3×4=12)

1) Sketch the following signal.

a) $x(-t + 3)$

b) $x(-2t - 3)$

2) Find even and odd component of the following signal.

Set R

- 3) Obtain Direct form – I realization for the system described by differential equation

$$\frac{d^2y(t)}{dt^2} - \frac{dy(t)}{dt} - 2y(t) = x(t) + \frac{d^2x(t)}{dt^2}.$$

- 4) Check for Linear or non linear and causal or non causal $y(t) = e^{x(t)}$.

3. Answer **any two** : (2×8=16)

- 1) Find the step response and also check the stability if the impulse response is $(e^{-2t})u(t)$.
- 2) Determine the following system is
 - a) Static/Dynamic
 - b) Linear/Non linear
 - c) Causal/Non Causal
 - d) Time Variant/Invariant
- 3) Find the convolution using graphical method $x[n] = \{1, 2, 3, 2\}$ $h(n) = \{1, 2, 2\}$

SECTION – II

4. Attempt **any three** : (3×4=12)

- 1) Explain the sampling theorem in detail and define aliasing effect.
- 2) The analog signal $m(t)$ is given as below
 $m(t) = 4 \cos(50 \pi t) + 8 \sin(300 \pi t) - \cos(100 \pi t)$ calculate Nyquist sampling rate.
- 3) Find Z transform with its ROC for $(n) = a^n \cdot u(n)$.
- 4) Obtain Fourier transform of $(t) = e^{at} \cdot u(t)$.

5. Attempt **any two** : (2×8=16)

- 1) Find the Fourier transform of $x(t) = e^{-a/t}$ where $a > 0$.
- 2) Determine the sequence $x(n)$ associated with Z. T given below using power series method. $X(z) = 1 + \frac{z^2 + z}{z^2 - 2z + 1}$; Right sided sequence.
- 3) Find Fourier series coefficient using trigonometric Fourier series method for the signal $x(t) = t$. The signal repeats after every 1 sec.

S.E. (Electronics and Telecommunication) (Part – II) (CGPA)
Examination, 2016
SIGNALS AND SYSTEMS

Day and Date : Friday, 25-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 70

- Instructions :** 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
3) **All questions are compulsory.**
4) Assume **suitable** data if necessary.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer : **(1×14=14)**

- 1) Aliasing occurs when a signal of band width W is sampled with sampling frequency F
 - a) Greater than W
 - b) Less than W
 - c) Greater than $2W$
 - d) Less than $2W$
- 2) The Fourier transform of $F(at)$ is given by
 - a) $f(at) \leftrightarrow aF(w)$
 - b) $f(at) \leftrightarrow (2/a)F(w)$
 - c) $f(at) \leftrightarrow (1/a)F(w/a)$
 - d) None of these
- 3) Sampling a signal is equivalent to multiplying it with
 - a) A sync function
 - b) A train of impulse
 - c) A train of sync functions
 - d) A rectangular window
- 4) Z transform reduces to Fourier transform when it is evaluated on
 - a) A half circle
 - b) Z circle
 - c) Unit circle
 - d) Imaginary circle
- 5) If $x(n)$ exists only for $-4 < n \leq 4$ then it is called as _____ sequence.
 - a) Bilateral
 - b) Unilateral
 - c) Both a) and b)
 - d) None

P.T.O.

- 6) Which system is non causal system ?
- a) $y(t) = x(t + 1)$ b) $y(t) = x(t - 1)$
 c) $y(t) = x(t) + c$ d) $y(t) = x(t - 1) + c$
- 7) Identify the non periodic signal
- a) $x(t) = \cos^2(t)$ b) $x(t) = \cos 2\pi t u(t)$
 c) $x(t) = \sin(2\pi/3)t$ d) $x(t) = \sin^2(t)$
- 8) Any signal $x(t)$ can be represented as
- a) $x_e(t) + x_o(t)$ b) $x_e(t) - x_o(t)$
 c) $x_e(t)/x_o(t)$ d) $x_e(t) \cdot x_o(t)$
- 9) Which property is not true for convolution integral ?
- a) $\int_{-\infty}^{\infty} |h(\tau)| d\tau < \infty$ b) $\int_{-\infty}^{\infty} |h(\tau)| d\tau > 0$
 c) $\int_{-\infty}^{\infty} |h(\tau)| d\tau < 0$ d) $\int_{-\infty}^{\infty} |h(\tau)| d\tau = 1$
- 10) Find the convolution of $x[n] = \{1, 2, 2\}$ $h[n] = \{1, 2\}$
- a) $\{1, 2, 5, 6\}$ b) $\{0, 4, 3, 1\}$
 c) $\{1, 4, 6, 4\}$ d) $\{4, 2, 3, 1\}$
- 11) Find the time period of $x(t) = \cos(50t)$
- a) 25π b) 50 c) $\pi/2$ d) $\pi/25$
- 12) The following system is $y(t) = x(t - 2)$
- a) Causal and Static b) Non causal and Static
 c) Causal and Dynamic d) Non causal and Dynamic
- 13) For $x(n) = -u(-n - 1)$; then ROC is
- a) $|z| > 1$ b) $|z| < 1$ c) $|z| > 0$ d) $|z| < 0$
- 14) When the system has poles inside the unit circle in Z-domain
- a) The system is stable and its impulse response is a decaying function
 b) Time domain behavior will be exponentially rising signal
 c) The system is unstable
 d) The impulse response is marginally constant

Time : 10.00 a.m to 1.00 p.m.

Max. Marks : 70

- Instructions :** 1) Assume suitable data *wherever* necessary.
2) Figures to the **right** indicate **full** marks.
3) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
4) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct option : **(1×14=14)**

- 1) If pair of +ve and –ve charges of 2C separated by distance $3\mu\text{m}$ then the magnitude of dipole moment is
 - a) 2 C- μm
 - b) 1.5 C-m
 - c) 6 C- μm
 - d) 3 C- μm
- 2) If the voltage applied across the capacitor is increased, the capacitance value
 - a) increases
 - b) decreases
 - c) remains constant
 - d) becomes infinity
- 3) If the direction of Coulomb's Force on a unit charge is \overline{ax} , the direction of electric field intensity is
 - a) \overline{ay}
 - b) $\overline{-ax}$
 - c) \overline{az}
 - d) \overline{ax}
- 4) Divergence theorem relates
 - a) Line integral with volume integral
 - b) Line integral with surface integral
 - c) Surface integral with volume integral
 - d) Surface integral with surface integral

P.T.O.

- 5) The normal components of D are _____ across a dielectric boundary.
a) Discontinuous b) Continuous
c) zero d) ∞
- 6) The electric field intensity E at a point $(1, 2, 2)$ due to 7 nC located at $(0, 0, 0)$ is
a) 7 V/m b) 0 V/m
c) $1/7 \text{ V/m}$ d) None of these
- 7) Which of the following is meaningless combination ?
a) grad div b) curl div
c) curl grad d) none of these
- 8) Magnetic flux density is a relation of
a) Current and area b) Area and its direction
c) Magnetic flux and area d) None of these
- 9) Total flux passing through a closed surface held in a magnetic field is
a) Infinity b) Zero
c) Unity d) None of these
- 10) Energy density W_H is given as
a) Energy per volume b) Energy per area
c) Linear energy d) All of these
- 11) A Loop antenna may be of
a) Square or triangular shape b) Hexagonal shape
c) Circular shape d) Any of the above
- 12) The wave equation is
a) $\nabla \bar{E} = Y \bar{E}$ b) $\nabla^2 \bar{E} = Y \bar{E}$
c) $\nabla^2 \bar{E} = Y^2 \bar{E}$ d) $\nabla \bar{E} = Y^2 \bar{E}$
- 13) The unit of vector magnetic potential is
a) flux b) volt
c) v/m d) wb/m
- 14) $\nabla \cdot \bar{J} = 0$ is frequently known as
a) Continuity equation for steady currents
b) Laplace equation
c) Poisson's equation
d) None of these

Day and Date : Monday, 28-11-2016
Time : 10.00 a.m to 1.00 p.m.

Marks : 56

Instruction : 1) Assume suitable data **wherever** necessary.
2) Figures to the **right** indicate **full** marks.

SECTION – I

2. Attempt **any three** : **(3×4=12)**

- 1) State and prove Gauss' Law.
- 2) Charge $Q_1 = -10$ nC is at origin in free space. In order to make x-component of $\vec{E} = 0$ at point (3, 1, 1), what charge Q_2 should be kept at point (2, 0, 0) ?
- 3) Derive an equation of potential for a dipole.
- 4) $V = 150 x^{4/3}$ for $x > 0$ with $\epsilon = \epsilon_0$, find \vec{E} , \vec{D} , ρ_v as a function of x .
- 5) Let $\vec{D} = (10r^2 + 5e^{-r})\vec{a}_r \frac{C}{m^2}$ in spherical co-ordinates. Find volume charge density for $r = 1$ m.

3. Attempt **any two** : **(2×8=16)**

- a) Verify Divergence theorem for $\vec{D} = \frac{2}{z^2} (yz\vec{a}_x + xz\vec{a}_y - 2xy\vec{a}_z)$ C/m³ for $2 \leq x \leq 3, 2 \leq y \leq 3, 2 \leq z \leq 3$.
- b) Derive an expression for electric field intensity on in xy plane produced by an infinite uniform line charge placed along z axis.
- c) Derive boundary conditions for perfect dielectrics.

Set P

SECTION – II

4. Solve **any three** : **(3×4=12)**

- 1) Derive Amperes law of differential current element.
- 2) State and explain Biot-Savarts law.
- 3) Explain following parameters of antenna.
 - a) Directive Gain
 - b) Power Gain
 - c) Antenna Efficiency
- 4) Given that $\vec{H} = H_m e^{j(\omega t + \beta z)} \vec{a}_x$ in free space. Find \vec{E} .
- 5) A Infinite current filament is placed at $y = 2, z = -1$. Find magnetic field intensity at P(2, 3, 4) when carries current of 1A.

5. Solve **any two** : **(2×8=16)**

- 1) Derive expression on magnetic field intensity due to finite current element.
 - 2) What values of A and β are required of two fields $\vec{E} = 120\pi \cos(10^6 \pi t - \beta x) \vec{a}_y$ (V/m) and $\vec{H} = A \cos(10^6 \pi t - \beta x) \vec{a}_z$ (A/m)? Satisfy Maxwell's equation in a medium where $\mu_r = \epsilon_r = 4$ and $\sigma = 0$.
 - 3) Derive the expression for Linear array with n sources of equal amplitude and spacing and explain for end-fire case.

c) Circular shape
d) Any of the above
- 8) The wave equation is
a) $\nabla \bar{E} = Y \bar{E}$
b) $\nabla^2 \bar{E} = Y \bar{E}$
c) $\nabla^2 \bar{E} = Y^2 \bar{E}$
d) $\nabla \bar{E} = Y^2 \bar{E}$
- 9) The unit of vector magnetic potential is
a) flux
b) volt
c) v/m
d) wb/m
- 10) $\nabla \cdot \bar{J} = 0$ is frequently known as
a) Continuity equation for steady currents
b) Laplace equation
c) Poisson's equation
d) None of these
- 11) If pair of +ve and -ve charges of $2C$ separated by distance $3\mu m$ then the magnitude of dipole moment is
a) $2 C \cdot \mu m$
b) $1.5 C \cdot m$
c) $6 C \cdot \mu m$
d) $3 C \cdot \mu m$
- 12) If the voltage applied across the capacitor is increased, the capacitance value
a) increases
b) decreases
c) remains constant
d) becomes infinity
- 13) If the direction of Coulomb's Force on a unit charge is \bar{a}_x , the direction of electric field intensity is
a) \bar{a}_y
b) $-\bar{a}_x$
c) \bar{a}_z
d) \bar{a}_x
- 14) Divergence theorem relates
a) Line integral with volume integral
b) Line integral with surface integral
c) Surface integral with volume integral
d) Surface integral with surface integral
-

**T.E. (Electronics and Telecommunication Engg.) (Part – I) (CGPA)
Examination, 2016
ELECTROMAGNETIC ENGG. AND RADIATING SYSTEMS (New)**

Day and Date : Monday, 28-11-2016
Time : 10.00 a.m to 1.00 p.m.

Marks : 56

Instruction : 1) Assume suitable data **wherever** necessary.
2) Figures to the **right** indicate **full** marks.

SECTION – I

2. Attempt **any three** : **(3×4=12)**

- 1) State and prove Gauss' Law.
- 2) Charge $Q_1 = -10 \text{ nC}$ is at origin in free space. In order to make x-component of $\vec{E} = 0$ at point (3, 1, 1), what charge Q_2 should be kept at point (2, 0, 0) ?
- 3) Derive an equation of potential for a dipole.
- 4) $V = 150 x^{4/3}$ for $x > 0$ with $\epsilon = \epsilon_0$, find \vec{E} , \vec{D} , ρ_v as a function of x .
- 5) Let $\vec{D} = (10r^2 + 5e^{-r})\vec{a}_r \frac{\text{C}}{\text{m}^2}$ in spherical co-ordinates. Find volume charge density for $r = 1\text{m}$.

3. Attempt **any two** : **(2×8=16)**

- a) Verify Divergence theorem for $\vec{D} = \frac{2}{z^2}(yz\vec{a}_x + xz\vec{a}_y - 2xy\vec{a}_z) \text{ C/m}^3$ for $2 \leq x \leq 3, 2 \leq y \leq 3, 2 \leq z \leq 3$.
- b) Derive an expression for electric field intensity on in xy plane produced by an infinite uniform line charge placed along z axis.
- c) Derive boundary conditions for perfect dielectrics.

Set R

SECTION – II

4. Solve **any three** : **(3×4=12)**

- 1) Derive Amperes law of differential current element.
- 2) State and explain Biot-Savarts law.
- 3) Explain following parameters of antenna.
 - a) Directive Gain
 - b) Power Gain
 - c) Antenna Efficiency
- 4) Given that $\vec{H} = H_m e^{j(\omega t + \beta z)} \vec{a}_x$ in free space. Find \vec{E} .
- 5) A Infinite current filament is placed at $y = 2, z = -1$. Find magnetic field intensity at P(2, 3, 4) when carries current of 1A.

5. Solve **any two** : **(2×8=16)**

- 1) Derive expression on magnetic field intensity due to finite current element.
 - 2) What values of A and β are required of two fields $\vec{E} = 120\pi \cos(10^6 \pi t - \beta x) \vec{a}_y$ (V/m) and $\vec{H} = A \cos(10^6 \pi t - \beta x) \vec{a}_z$ (A/m)? Satisfy Maxwell's equation in a medium where $\mu_r = \epsilon_r = 4$ and $\sigma = 0$.
 - 3) Derive the expression for Linear array with n sources of equal amplitude and spacing and explain for end-fire case.
-

2) Figures to the **right** indicate **full** marks.
3) Q. No. **1** is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. **3**. **Each** question carries **one** mark.
4) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct option :

(1×14=14)

- 1) Energy density W_H is given as
 - a) Energy per volume
 - b) Energy per area
 - c) Linear energy
 - d) All of these
- 2) A Loop antenna may be of
 - a) Square or triangular shape
 - b) Hexagonal shape
 - c) Circular shape
 - d) Any of the above
- 3) The wave equation is
 - a) $\nabla \bar{E} = Y \bar{E}$
 - b) $\nabla^2 \bar{E} = Y \bar{E}$
 - c) $\nabla^2 \bar{E} = Y^2 \bar{E}$
 - d) $\nabla \bar{E} = Y^2 \bar{E}$
- 4) The unit of vector magnetic potential is
 - a) flux
 - b) volt
 - c) v/m
 - d) wb/m
- 5) $\nabla \cdot \bar{J} = 0$ is frequently known as
 - a) Continuity equation for steady currents
 - b) Laplace equation
 - c) Poisson's equation
 - d) None of these

P.T.O.

- 6) If pair of +ve and -ve charges of $2C$ separated by distance $3\mu m$ then the magnitude of dipole moment is
 - a) $2 C-\mu m$
 - b) $1.5 C-m$
 - c) $6 C-\mu m$
 - d) $3 C-\mu m$
- 7) If the voltage applied across the capacitor is increased, the capacitance value
 - a) increases
 - b) decreases
 - c) remains constant
 - d) becomes infinity
- 8) If the direction of Coulomb's Force on a unit charge is \overline{ax} , the direction of electric field intensity is
 - a) \overline{ay}
 - b) $\overline{-ax}$
 - c) \overline{az}
 - d) \overline{ax}
- 9) Divergence theorem relates
 - a) Line integral with volume integral
 - b) Line integral with surface integral
 - c) Surface integral with volume integral
 - d) Surface integral with surface integral
- 10) The normal components of D are _____ across a dielectric boundary.
 - a) Discontinuous
 - b) Continuous
 - c) zero
 - d) ∞
- 11) The electric field intensity E at a point $(1, 2, 2)$ due to $7 nC$ located at $(0, 0, 0)$ is
 - a) $7 V/m$
 - b) $0 V/m$
 - c) $1/7 V/m$
 - d) None of these
- 12) Which of the following is meaningless combination ?
 - a) grad div
 - b) curl div
 - c) curl grad
 - d) none of these
- 13) Magnetic flux density is a relation of
 - a) Current and area
 - b) Area and its direction
 - c) Magnetic flux and area
 - d) None of these
- 14) Total flux passing through a closed surface held in a magnetic field is
 - a) Infinity
 - b) Zero
 - c) Unity
 - d) None of these

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

- 1) The entropy of a message source generating four messages with probability 0.5, 0.25, 0.125, 0.125 is
 - a) 1 bit/message
 - b) 1.75 bit/message
 - c) 3.32 bit/message
 - d) 5.93 bit/message
- 2) The baud rate when using binary transmission is
 - a) always equal to the bit rate
 - b) equal to twice the bandwidth of an ideal channel
 - c) not equal to the signaling rate
 - d) equal to one half of the bandwidth of ideal channel
- 3) The circuit required to generate the flat topped PAM signal is
 - a) a simple integrator circuit
 - b) a differentiator circuit
 - c) a sample and hold circuit
 - d) none of these
- 4) In a DM system, the granular (idling) noise occurs when the modulating signal
 - a) increases rapidly
 - b) remains constant
 - c) decreases rapidly
 - d) nature of modulating signal has nothing to do with this noise
- 5) The quantizer in the PCM transmitter is used for
 - a) converting analog signal into N bit digital word
 - b) converting the N bit parallel word into a serial output
 - c) rounding off each sample value of its nearest standard value
 - d) none of the above

P.T.O.

- 6) In an eye pattern opening of eye indicates
- a) ISI increases
 - b) ISI decreases
 - c) Timing jitter increases
 - d) Timing jitter decreases
- 7) Which encoding method uses alternating positive and negative values for 1's ?
- a) NRZ-1
 - b) RZ
 - c) Manchester
 - d) AMI
- 8) _____ most affected by noise.
- a) PSK
 - b) ASK
 - c) FSK
 - d) DPSK
- 9) In a continuous wave modulation scheme the input signal is _____ and transmitted signal is
- a) analog, analog
 - b) digital, analog
 - c) digital, digital
 - d) analog, digital
- 10) In a QAM both identities are varied
- a) amplitude and phase
 - b) frequency and phase
 - c) bit rate and phase
 - d) baud rate and phase
- 11) The noise immunity of 16 QASK is _____ than 16 PSK.
- a) Less
 - b) High
 - c) Equal
 - d) None
- 12) If in a particular digital communication system application, the receiver designed is an optimum coherent receiver, the channel noise is white and bits are transmitted using rectangular pulses then which one of the following statement would be inconsistent ? The receiver is
- a) a correlation receiver
 - b) matched filter receiver
 - c) an integrate and dump receiver
 - d) sample, hold and dump receiver
- 13) Costas loop is a method for
- a) Frame synchronization
 - b) Carrier synchronization
 - c) Symbol synchronization
 - d) None of these
- 14) Multichannel signal transmission is commonly used on time varying channels to overcome the effects of
- a) attenuation
 - b) amplification
 - c) phase shift
 - d) signal fading

- c) With the circuit diagram explain a PPM modulator and demodulator.
- d) What is the significance of eye diagram ? Explain.
- e) An events has 6 possible outcomes with probabilities $P_1 = 1/2$, $P_2 = 1/4$, $P_3 = 1/8$, $P_4 = 1/16$, $P_5 = P_6 = 1/32$. Find entropy of the system. Also find the rate of information if there are 16 outcomes/sec.

3. Solve **any two** of the following : **(2×6=12)**

- a) With the help of block diagram explain the DPCM system. Explain how the drawbacks of PCM system is overcome in DPCM system.
- b) Apply Shannon – Fano coding procedure for following message ensemble. Also calculate average length of code and its efficiency. Assume $M = 2$.

$[X] = [x_1 \quad x_2 \quad x_3 \quad x_4 \quad x_5 \quad x_6 \quad x_7]$

$[P] = [0.4 \quad 0.2 \quad 0.12 \quad 0.08 \quad 0.08 \quad 0.081 \quad 0.04]$

- c) Briefly explain the function of Scrambler and Unscrambler.

Set R

SECTION – II

28

4. Answer **any four** of the following : **(4×4=16)**
- a) Draw the block diagram of BPSK transmitter, obtain the equation for BPSK modulated signal.
 - b) Explain what matched filter is.
 - c) Write a note on M-ary orthogonal signals.
 - d) Derive an expression for error probability of optimum filter.
 - e) Explain the BFSK transmitter with neat block diagram.
5. Solve **any two** of the following : **(2×6=12)**
- a) Explain how to minimize peak to average power ratio in multicarrier system.
 - b) What are different symbol synchronization methods ? Explain DTTL method in detail.
 - c) Explain with neat phasor diagram and block diagram M-ary coherent PSK.

T.E. (E&TC) (Part – I) Examination, 2016
(New CGPA)
PRINCIPLES OF DIGITAL COMMUNICATION

Day and Date : Wednesday, 30-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 70

- Instructions :**
- 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - 2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
 - 3) Assume suitable data **if necessary**.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

- 1) In a QAM both identities are varied
 - a) amplitude and phase
 - b) frequency and phase
 - c) bit rate and phase
 - d) baud rate and phase
- 2) The noise immunity of 16 QASK is _____ than 16 PSK.
 - a) Less
 - b) High
 - c) Equal
 - d) None
- 3) If in a particular digital communication system application, the receiver designed is an optimum coherent receiver, the channel noise is white and bits are transmitted using rectangular pulses then which one of the following statement would be inconsistent ? The receiver is
 - a) a correlation receiver
 - b) matched filter receiver
 - c) an integrate and dump receiver
 - d) sample, hold and dump receiver
- 4) Costas loop is a method for
 - a) Frame synchronization
 - b) Carrier synchronization
 - c) Symbol synchronization
 - d) None of these
- 5) Multichannel signal transmission is commonly used on time varying channels to overcome the effects of
 - a) attenuation
 - b) amplification
 - c) phase shift
 - d) signal fading

P.T.O.

- 6) The entropy of a message source generating four messages with probability 0.5, 0.25, 0.125, 0.125 is
 - a) 1 bit/message
 - b) 1.75 bit/message
 - c) 3.32 bit/message
 - d) 5.93 bit/message
- 7) The baud rate when using binary transmission is
 - a) always equal to the bit rate
 - b) equal to twice the bandwidth of an ideal channel
 - c) not equal to the signaling rate
 - d) equal to one half of the bandwidth of ideal channel
- 8) The circuit required to generate the flat topped PAM signal is
 - a) a simple integrator circuit
 - b) a differentiator circuit
 - c) a sample and hold circuit
 - d) none of these
- 9) In a DM system, the granular (idling) noise occurs when the modulating signal
 - a) increases rapidly
 - b) remains constant
 - c) decreases rapidly
 - d) nature of modulating signal has nothing to do with this noise
- 10) The quantizer in the PCM transmitter is used for
 - a) converting analog signal into N bit digital word
 - b) converting the N bit parallel word into a serial output
 - c) rounding off each sample value of its nearest standard value
 - d) none of the above
- 11) In an eye pattern opening of eye indicates
 - a) ISI increases
 - b) ISI decreases
 - c) Timing jitter increases
 - d) Timing jitter decreases
- 12) Which encoding method uses alternating positive and negative values for 1's ?
 - a) NRZ-1
 - b) RZ
 - c) Manchester
 - d) AMI
- 13) _____ most affected by noise.
 - a) PSK
 - b) ASK
 - c) FSK
 - d) DPSK
- 14) In a continuous wave modulation scheme the input signal is _____ and transmitted signal is
 - a) analog, analog
 - b) digital, analog
 - c) digital, digital
 - d) analog, digital

(SEPMS)

Day and Date : Friday, 2-12-2016

Max. Marks : 70

Time : 10.00 a.m. to 1.00 p.m.

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.

2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

(14×1=14)

- 1) Component testing is a responsibility of
 - a) System test team
 - b) Component developer
 - c) Test manager
 - d) Customer
- 2) Test automation helps to
 - a) Reduce the cost of testing
 - b) Increase the cost of testing
 - c) Reduce time of testing
 - d) Increase time of testing
- 3) Context model is concerned with
 - a) System model
 - b) Arrangement of elements around some entity
 - c) Process model
 - d) All of the above
- 4) "v" model gives stress on
 - a) Maintenance of system
 - b) Testing of system
 - c) Validation of system
 - d) Both b) and c)
- 5) Functional requirement includes
 - a) I/p to system
 - b) O/p of system
 - c) I/p and o/p
 - d) Security of system

P.T.O.

- 6) Requirement document is prepared with respect to
 - a) Manager
 - b) Customer
 - c) System test engineer
 - d) All of the above
- 7) The fundamental notions of software engineering does not account for
 - a) Software processes
 - b) Software security
 - c) Software reuse
 - d) Software validation
- 8) The base line budget is based on
 - a) Activity network
 - b) Cost monitoring
 - c) Proposed plan
 - d) None
- 9) In an activity on arrow network, which of below have duration ?
 - a) Link
 - b) Loop
 - c) Node
 - d) All
- 10) _____ is carried out to calculate the latest dates on which each activity may be started and completed.
 - a) Backward pass
 - b) Forward pass
 - c) End pass
 - d) None
- 11) The Gantt chart is used for
 - a) Tracking project progress
 - b) Knowing date of project
 - c) Knowing starting date of project
 - d) Knowing end date of project
- 12) In network model formulation hammock activities required
 - a) Full
 - b) Half
 - c) Zero
 - d) One and half
- 13) From program management where a portfolio of all project contribute to a common objective
 - a) Strategic programme
 - b) Business cycle
 - c) Innovative
 - d) R & D
- 14) One of the objectives of activity planning is
 - a) Planning
 - b) Estimation
 - c) Co-ordination
 - d) None

(SEPMS)**

Day and Date : Friday, 2-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 56

SECTION – I

2. Solve **any three** : **(3×4=12)**
- a) Explain software validation.
 - b) Write note on “Rational Unified Process”.
 - c) Prepare “Software Test Case Design Document”.
 - d) Explain test automation in detail.
3. Solve **any two** : **(8×2=16)**
- a) Explain software life cycle using prototyping.
 - b) List system models and explain any one of them.
 - c) Compare V model with waterfall process model with diagram.

SECTION – II

4. Solve **any four (3.5 marks each)** :
- 1) Explain portfolio management for a business case.
 - 2) What is change control, explain change control procedures.
 - 3) Write note on risk identification.
 - 4) Explain cost monitoring with cumulative expenditure chart.
 - 5) Write note on assessment.
5. Solve **any two (7 marks each)** :
- 1) Explain forward path and backward path with example, from example identify critical path.
 - 2) Explain project progress using the Gantt chart and slip chart, explain disadvantages of chart.
 - 3) Write step wise project planning activates.

DIGITAL SIGNAL PROCESSING

Day and Date : Monday, 5-12-2016
 Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 70

- Instructions :**
- 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - 2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
 - 3) **All** questions are **compulsory**.
 - 4) Figure to the **right** indicate **full** marks.
 - 5) Assume suitable data if **necessary**.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

(1×14=14)

- 1) Let $x_1(t)$ and $x_2(t)$ be periodic signals with fundamental periods T_1 and T_2 respectively. Then the fundamental period of $x(t) = x_1(t) + x_2(t)$ is
 - a) LCM of T_1 and T_2
 - b) Product of T_1 and T_2
 - c) HCF of T_1 and T_2
 - d) Ratio of T_1 to T_2
- 2) If $x(n)$ is a real sequence and $X(k)$ is its N -point DFT, then which of the following is true ?
 - a) $X(N - k) = X(-k)$
 - b) $X(N - k) = X^*(k)$
 - c) $X(-k) = X^*(k)$
 - d) All of the mentioned
- 3) If $x_1(n)$, $x_2(n)$ and $x_3(m)$ are three sequences each of length N whose DFTs are given as $X_1(k)$, $X_2(k)$ and $X_3(k)$ respectively and $X_3(k) = X_1(k).X_2(k)$, then what is the expression for $x_3(m)$?
 - a) $\sum_{n=0}^{N-1} x_1(n).x_2(m + n)$
 - b) $\sum_{n=0}^{N-1} x_1(n).x_2(m - n)$
 - c) $\sum_{n=0}^{N-1} x_1(n).x_2((m - n))_N$
 - d) $\sum_{n=0}^{N-1} x_1(n).x_2((m + n))_{N+1}$
- 4) Which of the following is true in case of overlap add method ?
 - a) M zeros are appended at last of each data block
 - b) M zeros are appended at first of each data block
 - c) $M-1$ zeros are appended at last of each data block
 - d) $M-1$ zeros are appended at first of each data block
- 5) Which of the following is true regarding the number of computations required to compute an N -point DFT using FFT algorithms ?
 - a) N^2 complex multiplications and $N(N - 1)$ complex additions
 - b) N^2 complex additions and $N(N - 1)$ complex multiplications
 - c) N^2 complex multiplications and $N(N + 1)$ complex additions
 - d) N^2 complex additions and $N(N + 1)$ complex multiplications

P.T.O.

- 6) $W_N^{k+N/2} =$
 - a) W_N^k
 - b) $-W_N^k$
 - c) W_N^{-k}
 - d) None of the mentioned
- 7) Which of the following conditions made digital signal processing more advantageous over analog signal processing ?
 - a) Time
 - b) Spatial co-ordinates
 - c) Pressure
 - d) None of the mentioned
- 8) The disadvantage of FIR filter
 - a) FIR filter with exact linear phase can be easily designed
 - b) FIR filter can be realized in both recursive and non recursive structure
 - c) FIR filters are free from limit cycle oscillation
 - d) Memory requirement and execution time are high
- 9) FIR filter is always stable because
 - a) All its poles are at origin
 - b) All its zeros are at origin
 - c) $h(n) = h(N-1-n)$
 - d) None
- 10) IIR filter design is based on _____ filter design.
 - a) Analog
 - b) Discrete time
 - c) Digital
 - d) None
- 11) For impulse response of FIR filter to satisfy for constant group delay, the phase is given by
 - a) $\theta(\omega) = -\alpha\omega$
 - b) $\theta(\omega) = \alpha\omega$
 - c) $\theta(\omega) = \beta - \alpha\omega$
 - d) $\theta(\omega) = 0$
- 12) Butterworth filter have
 - a) constant response in pass band and decreasing response in stop band
 - b) maximally flat response in pass band and monotonically decreasing response in stop band
 - c) ripple in pass band and ripple in stop band
 - d) none
- 13) The advantage of cascade realization is
 - a) Quantization error can be minimized
 - b) Noise decreased
 - c) Linear Phase
 - d) None
- 14) Direct form II requires
 - a) $M+N+1$ multiplication
 - b) $M+N$ addition
 - c) Maximum of (M, N) memory location
 - d) All of the above

T.E. (E & TC) (Part – I) (New CGPA) Examination, 2016
DIGITAL SIGNAL PROCESSING

Day and Date : Monday, 5-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 56

- Instructions :** 1) **All questions are compulsory.**
2) **Figure to the right indicate full marks.**
3) **Assume suitable data if necessary.**

SECTION – I

2. Attempt **any four** of the following : **(4×5=20)**
- a) The first 5 point of the 8 point DFT of a real valued sequence are $\{0.25, 0.125 - j0.3018, 0, 0.125 - j0.0518, 0\}$. Determine the remaining three points.
 - b) Find cross correlation of given DT sequences : $x[n] = \{1, 2, 3, 4\}$ and $h[n] = \{5, 0, 6\}$.
 - c) Explain Goertzel algorithm.
 - d) Using transformation matrix, obtain $X[k]$ if $x[n] = \{1, 2, 3, 2\}$.
 - e) Perform circular convolution of $x[n] = \{1, 2, 3, 4\}$ and $y[n] = \{5, 6, 7\}$.
3. Attempt **any one** of the following : **(1×8=8)**
- a) Find linear convolution using overlap-Save method of the following sequences :
 $X[n] = \{1, 2, 3, 4, 5, 6, 7\}$ and $h[n] = \{1, 0, 2\}$.
 - b) Find $x[n]$ using DIF FFT where $X(k) = \{20, 0, -4 + j4, 0, -4, 0, -4 - j4, 0\}$.

SECTION – II

4. Solve **any four** : **(4×4=16)**
- a) Write a short note on Gibb's phenomenon.
 - b) With block diagram explain FIR implementation technique.
 - c) By impulse invariance method obtain the digital filter transfer function and the differential equation of analog filter $H(s) = \frac{1}{s+1}$.
 - d) Obtain direct form I for system $y(n) = -0.1y(n-1) + 0.2y(n-2) + 3x(n) + 3.6x(n-1) + 0.6x(n-2)$
 - e) Explain the application of DSP in audio processing in detail.

Set P

5. Solve **any two** :**(6×2=12)**

a) Using bilinear transformation obtain $H(Z)$ if $H(s) = \frac{s+0.1}{(s+0.1)^2 + 9}$ and $T = 0.1$ s.

b) Design an ideal high pass filter with a frequency response

$$H_d(e^{j\omega}) = 1 \quad \text{for } \pi \geq \omega \geq \frac{\pi}{3}$$
$$= 0 \quad \text{otherwise}$$

Find the values of $h(n)$ for $N = 7$ and $H(Z)$ using Hanning window.

c) Consider an FIR lattice filter with coefficients $k_1 = \frac{1}{2}$; $k_2 = \frac{1}{3}$; $k_3 = \frac{1}{4}$. Determine the FIR filter coefficients for direct form structure.

d) Design an analog low pass Butterworth filter with pass band and stop band cut off frequencies 800 rad/sec and 1800 rad/sec. The pass band attenuation is – 3 dB and stop band attenuation is – 10 dB.

Q

T.E. (E & TC) (Part – I) (New CGPA) Examination, 2016
DIGITAL SIGNAL PROCESSING

Day and Date : Monday, 5-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 70

- Instructions :**
- 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - 2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
 - 3) **All questions are compulsory.**
 - 4) **Figure to the right indicate full marks.**
 - 5) **Assume suitable data if necessary.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

(1×14=14)

- 1) The disadvantage of FIR filter
 - a) FIR filter with exact linear phase can be easily designed
 - b) FIR filter can be realized in both recursive and non recursive structure
 - c) FIR filters are free from limit cycle oscillation
 - d) Memory requirement and execution time are high
- 2) FIR filter is always stable because
 - a) All its poles are at origin
 - b) All its zeros are at origin
 - c) $h(n) = h(N-1-n)$
 - d) None
- 3) IIR filter design is based on _____ filter design.
 - a) Analog
 - b) Discrete time
 - c) Digital
 - d) None
- 4) For impulse response of FIR filter to satisfy for constant group delay, the phase is given by
 - a) $\theta(\omega) = -\alpha\omega$
 - b) $\theta(\omega) = \alpha\omega$
 - c) $\theta(\omega) = \beta - \alpha\omega$
 - d) $\theta(\omega) = 0$
- 5) Butterworth filter have
 - a) constant response in pass band and decreasing response in stop band
 - b) maximally flat response in pass band and monotonically decreasing response in stop band
 - c) ripple in pass band and ripple in stop band
 - d) none
- 6) The advantage of cascade realization is
 - a) Quantization error can be minimized
 - b) Noise decreased
 - c) Linear Phase
 - d) None

P.T.O.

- 7) Direct form II requires
- $M+N+1$ multiplication
 - $M+N$ addition
 - Maximum of (M, N) memory location
 - All of the above
- 8) Let $x_1(t)$ and $x_2(t)$ be periodic signals with fundamental periods T_1 and T_2 respectively. Then the fundamental period of $x(t) = x_1(t) + x_2(t)$ is
- LCM of T_1 and T_2
 - Product of T_1 and T_2
 - HCF of T_1 and T_2
 - Ratio of T_1 to T_2
- 9) If $x(n)$ is a real sequence and $X(k)$ is its N -point DFT, then which of the following is true ?
- $X(N - k) = X(-k)$
 - $X(N - k) = X^*(k)$
 - $X(-k) = X^*(k)$
 - All of the mentioned
- 10) If $x_1(n)$, $x_2(n)$ and $x_3(m)$ are three sequences each of length N whose DFTs are given as $X_1(k)$, $X_2(k)$ and $X_3(k)$ respectively and $X_3(k) = X_1(k) \cdot X_2(k)$, then what is the expression for $x_3(m)$?
- $\sum_{n=0}^{N-1} x_1(n) \cdot x_2(m + n)$
 - $\sum_{n=0}^{N-1} x_1(n) \cdot x_2(m - n)$
 - $\sum_{n=0}^{N-1} x_1(n) \cdot x_2((m - n))_N$
 - $\sum_{n=0}^{N-1} x_1(n) \cdot x_2((m + n))_{N+1}$
- 11) Which of the following is true in case of overlap add method ?
- M zeros are appended at last of each data block
 - M zeros are appended at first of each data block
 - $M-1$ zeros are appended at last of each data block
 - $M-1$ zeros are appended at first of each data block
- 12) Which of the following is true regarding the number of computations required to compute an N -point DFT using FFT algorithms ?
- N^2 complex multiplications and $N(N - 1)$ complex additions
 - N^2 complex additions and $N(N - 1)$ complex multiplications
 - N^2 complex multiplications and $N(N + 1)$ complex additions
 - N^2 complex additions and $N(N + 1)$ complex multiplications
- 13) $W_N^{k+N/2} =$
- W_N^k
 - $-W_N^k$
 - W_N^{-k}
 - None of the mentioned
- 14) Which of the following conditions made digital signal processing more advantageous over analog signal processing ?
- Time
 - Spatial co-ordinates
 - Pressure
 - None of the mentioned

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

(1×14=14)

- 1) IIR filter design is based on _____ filter design.
a) Analog b) Discrete time c) Digital d) None
- 2) For impulse response of FIR filter to satisfy for constant group delay, the phase is given by
a) $\theta(\omega) = -\alpha\omega$ b) $\theta(\omega) = \alpha\omega$ c) $\theta(\omega) = \beta - \alpha\omega$ d) $\theta(\omega) = 0$
- 3) Butterworth filter have
a) constant response in pass band and decreasing response in stop band
b) maximally flat response in pass band and monotonically decreasing response in stop band
c) ripple in pass band and ripple in stop band
d) none
- 4) The advantage of cascade realization is
a) Quantization error can be minimized
b) Noise decreased
c) Linear Phase
d) None
- 5) Direct form II requires
a) $M+N+1$ multiplication
b) $M+N$ addition
c) Maximum of (M, N) memory location
d) All of the above
- 6) Let $x_1(t)$ and $x_2(t)$ be periodic signals with fundamental periods T_1 and T_2 respectively. Then the fundamental period of $x(t) = x_1(t) + x_2(t)$ is
a) LCM of T_1 and T_2 b) Product of T_1 and T_2
c) HCF of T_1 and T_2 d) Ratio of T_1 to T_2

P.T.O.

- 7) If $x(n)$ is a real sequence and $X(k)$ is its N -point DFT, then which of the following is true ?
- $X(N - k) = X(-k)$
 - $X(N - k) = X^*(k)$
 - $X(-k) = X^*(k)$
 - All of the mentioned
- 8) If $x_1(n)$, $x_2(n)$ and $x_3(m)$ are three sequences each of length N whose DFTs are given as $X_1(k)$, $X_2(k)$ and $X_3(k)$ respectively and $X_3(k) = X_1(k).X_2(k)$, then what is the expression for $x_3(m)$?
- $\sum_{n=0}^{N-1} x_1(n).x_2(m + n)$
 - $\sum_{n=0}^{N-1} x_1(n).x_2(m - n)$
 - $\sum_{n=0}^{N-1} x_1(n).x_2((m - n))_N$
 - $\sum_{n=0}^{N-1} x_1(n).x_2((m + n))_{N+1}$
- 9) Which of the following is true in case of overlap add method ?
- M zeros are appended at last of each data block
 - M zeros are appended at first of each data block
 - $M-1$ zeros are appended at last of each data block
 - $M-1$ zeros are appended at first of each data block
- 10) Which of the following is true regarding the number of computations required to compute an N -point DFT using FFT algorithms ?
- N^2 complex multiplications and $N(N - 1)$ complex additions
 - N^2 complex additions and $N(N - 1)$ complex multiplications
 - N^2 complex multiplications and $N(N + 1)$ complex additions
 - N^2 complex additions and $N(N + 1)$ complex multiplications
- 11) $W_N^{k+N/2} =$
- W_N^k
 - $-W_N^k$
 - W_N^{-k}
 - None of the mentioned
- 12) Which of the following conditions made digital signal processing more advantageous over analog signal processing ?
- Time
 - Spatial co-ordinates
 - Pressure
 - None of the mentioned
- 13) The disadvantage of FIR filter
- FIR filter with exact linear phase can be easily designed
 - FIR filter can be realized in both recursive and non recursive structure
 - FIR filters are free from limit cycle oscillation
 - Memory requirement and execution time are high
- 14) FIR filter is always stable because
- All its poles are at origin
 - All its zeros are at origin
 - $h(n) = h(N-1-n)$
 - None

SECTION – I

2. Attempt **any four** of the following : **(4×5=20)**
- a) The first 5 point of the 8 point DFT of a real valued sequence are $\{0.25, 0.125 - j0.3018, 0, 0.125 - j0.0518, 0\}$. Determine the remaining three points.
 - b) Find cross correlation of given DT sequences : $x[n] = \{1, 2, 3, 4\}$ and $h[n] = \{5, 0, 6\}$.
 - c) Explain Goertzel algorithm.
 - d) Using transformation matrix, obtain $X[k]$ if $x[n] = \{1, 2, 3, 2\}$.
 - e) Perform circular convolution of $x[n] = \{1, 2, 3, 4\}$ and $y[n] = \{5, 6, 7\}$.
3. Attempt **any one** of the following : **(1×8=8)**
- a) Find linear convolution using overlap-Save method of the following sequences :
 $X[n] = \{1, 2, 3, 4, 5, 6, 7\}$ and $h[n] = \{1, 0, 2\}$.
 - b) Find $x[n]$ using DIF FFT where $X(k) = \{20, 0, -4 + j4, 0, -4, 0, -4 - j4, 0\}$.

SECTION – II

4. Solve **any four** : **(4×4=16)**
- a) Write a short note on Gibb's phenomenon.
 - b) With block diagram explain FIR implementation technique.
 - c) By impulse invariance method obtain the digital filter transfer function and the differential equation of analog filter $H(s) = \frac{1}{s+1}$.
 - d) Obtain direct form I for system $y(n) = -0.1y(n-1) + 0.2y(n-2) + 3x(n) + 3.6x(n-1) + 0.6x(n-2)$
 - e) Explain the application of DSP in audio processing in detail.

Set S

5. Solve **any two** :**(6×2=12)**

a) Using bilinear transformation obtain $H(Z)$ if $H(s) = \frac{s+0.1}{(s+0.1)^2 + 9}$ and $T = 0.1$ s.

b) Design an ideal high pass filter with a frequency response

$$H_d(e^{j\omega}) = 1 \quad \text{for } \pi \geq \omega \geq \frac{\pi}{3}$$
$$= 0 \quad \text{otherwise}$$

Find the values of $h(n)$ for $N = 7$ and $H(Z)$ using Hanning window.

c) Consider an FIR lattice filter with coefficients $k_1 = \frac{1}{2}$; $k_2 = \frac{1}{3}$; $k_3 = \frac{1}{4}$. Determine the FIR filter coefficients for direct form structure.

d) Design an analog low pass Butterworth filter with pass band and stop band cut off frequencies 800 rad/sec and 1800 rad/sec. The pass band attenuation is – 3 dB and stop band attenuation is – 10 dB.

**T.E. (Electronics and Telecommunication) (Part – I) (New CGPA)
Examination, 2016
MICROPROCESSORS**

Day and Date : Wednesday, 7-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 70

- Instructions :**
- 1) **All questions are compulsory.**
 - 2) Figures to the **right** indicate **full** marks.
 - 3) **Assume** suitable data **if** necessary.
 - 4) Q. No. **1** is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. **3**. **Each** question carries **one** mark.
 - 5) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 14

1. Choose the correct answer :

14

- 1) Which microprocessor pins are used to request and acknowledge a DMA transfer ?
 - a) Reset and Ready
 - b) Ready and INTR
 - c) HOLD and HLDA
 - d) None of these
- 2) In memory mapped I/O; address width is
 - a) 8 bit
 - b) 32 bit
 - c) 16 bit
 - d) 64 bit
- 3) RST 7.5 interrupt is
 - a) Level triggered
 - b) +ve edge triggered
 - c) –ve edge triggered
 - d) Both a) and b)
- 4) The length of the instruction queue in 8086 is
 - a) 4 byte
 - b) 5 byte
 - c) 6 byte
 - d) 8 byte
- 5) If all the ports of 8255 used in output mode then the command word is
 - a) 80H
 - b) 90H
 - c) A0H
 - d) B0H

P.T.O.

- 6) For generating square wave with period 1 ms, the BCD count value required to load in counter of 8253, for 1 MHz input frequency is
a) $(500)_{10}$ b) $(800)_{10}$ c) $(900)_{10}$ d) $(1000)_{10}$
- 7) The 8253 counter starts counting only if
a) GATE signal is low b) GATE signal is high
c) CLK signal is low d) CLK signal is high
- 8) 8251 is a
a) UART
b) USART
c) Programmable Interrupt controller
d) Programmable interval timer/counter
- 9) Which pins are general purpose I/O pins during mode-2 operation of the 8255 ?
a) PA0-PA7 b) PB0-PB7
c) PC4-PC7 d) PC0-PC3
- 10) ADC 0809 is of _____ type.
a) Weighted register b) Successive approximation
c) R-2R ladder d) Dual slope
- 11) Control word format required to initialize 8251 in asynchronous mode for baud rate factor 1x, character length 5 bits, no parity, 1 stop bit is
a) 41 H b) 51 H c) 50 H d) 40 H
- 12) The number of flags present in 8086 are
a) 5 b) 8 c) 9 d) 13
- 13) Tick mark the odd instruction from the given
a) XCHG b) RAL c) DAA d) ADD B
- 14) Microprocessor enter into wait state when
a) Any interrupt signal applied b) Low signal on READY pin
c) High signal on READY pin d) None of these
-

**T.E. (Electronics and Telecommunication) (Part – I) (New CGPA)
Examination, 2016
MICROPROCESSORS**

Day and Date : Wednesday, 7-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 56

Instructions : 1) *All questions are compulsory.*
2) *Figures to the right indicate full marks.*
3) *Assume suitable data if necessary.*

2. a) Solve **any two** : **10**
- 1) Explain the XCHG, RST0 and JP 16 bit address instructions of 8085.
 - 2) Write an assembly language program to identify the odd and even numbers from the array of 10 numbers. The even count store at a location 9000H and odd count store at location 9001H.
 - 3) Draw the timing diagram for the instruction ADD B.
- b) Generate control signals $\overline{\text{MEMR}}$, $\overline{\text{MEMW}}$, $\overline{\text{IOR}}$ and $\overline{\text{IOW}}$ by using the 3 : 8 decoder (74138). **4**
3. Solve **any two** : **14**
- 1) Interface 2K × 8 EPROM memory to 8085. Give its initial and final address.
 - 2) Explain the hardware interrupts of 8085.
 - 3) Explain the Reset, HOLD and wait state of microprocessor 8085.
4. a) Solve **any two** : **10**
- 1) Draw the PSW format and explain the flag registers of 8086.
 - 2) Explain the Mode-1 of 8255.
 - 3) Draw and explain R-2R Ladder type DAC.
- b) Draw the control word format of 8255 and determine the control word for the following :
- 1) PA – Input in mode 2 and PB in mode 1 as output port
 - 2) All ports are input except PCU. **4**

Set P

5. Solve **any two** :**14**

- 1) Draw an interfacing circuitry to interface 8253 with 8085 in I/O mapped I/O mode, so as to have 30 H is the counter 0 address. Explain Mode-3 of 8253.
 - 2) Interface common anode type seven segment display with 8085. Write a ALP to display 0 to 9 on it.
 - 3) Interface ADC 0809 with 8085 in I/O mapped I/O mode. Write a ALP to read a analog input applied to channel-3 and store the digital value at memory location 9000 H.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer : **(1×20=20)**

- 1) In E plane Tee, if input is given to auxiliary arm, the output from main arms are

a) In phase	b) 90° out of phase
c) 180° out of phase	d) 270° out of phase
- 2) An air filled rectangular waveguide of inside dimensions 7 cm × 3.5 cm operates in dominant mode. The cut of frequency is

a) 2.14 GHz	b) 21.4 GHz	c) 2.14 MHz	d) 21.4 MHz
-------------	-------------	-------------	-------------
- 3) An air filled rectangular waveguide has dimension of a = 6 cm and b = 4 cm. The signal frequency is 3 GHz. The phase constant for TE₁₀ mode is

a) 4.73 rad/m	b) 24.73 rad/m	c) 34.73 rad/m	d) 44.73 rad/m
---------------	----------------	----------------	----------------
- 4) The characteristic impedance of transmission line is given as $z_0 =$

a) $\sqrt{z/y}$	b) \sqrt{zy}	c) $\sqrt{z+y}$	d) $\sqrt{z-y}$
-----------------	----------------	-----------------	-----------------
- 5) The reflection coefficient is generally a complex quantity that can be expressed as $\Gamma = |\Gamma| e^{j\theta}$. Then θ for open circuit is

a) 180°	b) 0°	c) 90°	d) 270°
---------	-------	--------	---------
- 6) In rectangular waveguide, lower order modes are not present in

a) TE	b) TM	c) TEM	d) TE & TM
-------	-------	--------	------------
- 7) The spacing between the centers of two holes in directional coupler must be

a) $(n+1)\lambda/4$	b) $(n+2)\lambda/4$	c) $(2n+1)\lambda/4$	d) $n\lambda/4$
---------------------	---------------------	----------------------	-----------------

P.T.O.

- 8) A n type GaAS Gunn diode have a length $L = 210 \mu m$ with a low field resistance of 16Ω and applied voltage $V = 59 V$. Then the threshold electric field is
 a) 2810 V/cm b) 2800 V/cm c) 2805 V/cm d) 2815 V/cm
- 9) In two valley theory, the negative resistance is achieved only when
 a) $\Delta E = KT$ b) $\Delta E < KT$ c) $\Delta E > KT$ d) None of these
- 10) A typical n type GaAS Gunn diode has electron drift velocity of $10^5 m/s$ with electric field of 2800 V/cm. Then negative electron mobility is
 a) $-3100 cm^2/Vs$ b) $-1500 cm^2/Vs$ c) $-2500 cm^2/Vs$ d) $-2000 cm^2/Vs$
- 11) TWT is used as
 a) Low noise RF amplifier b) High freq. RF amplifier
 c) Both a) and b) d) None of these
- 12) In TWT electron beam is _____ and RF field is
 a) Travelling, Stationary b) Stationary, Stationary
 c) Travelling, Travelling d) Stationary, travelling
- 13) The maximum theoretical efficiency of two cavity klystron is
 a) 22% b) 58% c) 85% d) 48%
- 14) In reflex klystron as Repeller Voltage is increases output power
 a) Remains constant b) Increases
 c) Decreases d) None of these
- 15) The average power depends on the transmitter power P_t and the duty cycle given by
 a) $P_{avg} = P_t \cdot \text{duty cycle}$ b) $P_{avg} = P_t \cdot \text{pulse width} \cdot prf$
 c) Both of the above d) None of these
- 16) Mostly preferred slow wave structure in TWT is
 a) Zigzag b) Folded line back
 c) Corrugated waveguide d) Helical
- 17) In case of Magnetron frequency pushing takes place due to _____ variations.
 a) Supply b) Load c) Frequency d) Amplitude
- 18) _____ type of radar provides continuous range, bearing and elevation data on an object.
 a) Searching b) Tracking c) Pulsed d) MTI
- 19) The Doppler effect causes a change in what aspect of rf energy that strikes a moving object.
 a) Phase b) Frequency c) Energy d) None of these
- 20) Accurate Measurement of attenuation can be done by _____ method.
 a) Power Ratio b) RF substitution
 c) Using magic Tee d) Using slotted line

**T.E. (E & TC) (Part – II) Examination, 2016
RADAR AND MICROWAVE ENGINEERING**

Day and Date : Monday, 21-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 80

SECTION – I

2. Attempt **any four** : **(4×5=20)**

- 1) A transmission line has characteristic impedance of $z_0 = 50 \Omega$ and resistance of $0.1 \Omega / \text{m}$. If the line is distortionless then calculate attenuation constant of line.
- 2) Show that TM_{01} and TM_{10} modes in a rectangular waveguide do not exist.
- 3) What is the importance of negative resistance. How this resistance is achieved in Tunnel diode ?
- 4) Explain in detail measurement of unknown impedance using magic Tee.
- 5) Derive field equation for TE_{mn} mode.

3. Attempt **any two** : **(2×10=20)**

- 1) Derive the relation between reflection coefficient and transmission coefficient of transmission line. Explain the steps which are used for calculation of these values with Smith chart by taking one example.
- 2) The longitudinal component of the magnetic field inside an air filled rectangular waveguide made of a perfect electric conductor is given by following expression.

$$H_z = 0.1 \cos (25 \pi x) \cos (30.3 \pi y) \cos (12 \pi \times 10^9 t - \beta z)$$

The cross sectional dimensions of the waveguide are given as $a = 0.08 \text{ m}$ and $b = 0.033 \text{ m}$. Also calculate cut off frequency and guide wavelength of that mode.

- 3) Explain the working of two hole directional coupler and discuss the performance parameters of directional coupler.

SECTION – II

4. Answer **any four** : (4×5=20)

- a) Calculate maximum range of radar system which operates at 3 cm with peak pulse power of 600 kW if its antenna is 5 m^2 , minimum detectable signal is 10^{-13} W and the radar cross sectional area of the target is 20 m^2 .
- b) Draw a neat sketch of two cavity klystron amplifier. With the help of applegate diagram explain its working.
- c) Explain in A-scope and PPI Radar displays along with its limitations.
- d) Explain Phase shift measurement technique.
- e) Derive theoretical efficiency of reflex klystron.

5. Answer **any two** : (2×10=20)

- a) Write similarities and differences between TWT and Klystron. Explain construction and working of TWT.
- b) X band cylindrical magnetron has following parameters.
Anode voltage = 26 kV
Beam current = 27 A
Magnetic flux density = 0.336 wb/m^2
Cathode radius = 5 cm
Anode radius = 10 cm
Calculate :
 - 1) Cyclotron angular frequency
 - 2) Hull's cut-off voltage
 - 3) Cut-off magnetic flux density for given voltage.
- c) Draw block diagram and explain types of radars and its functions.

**T.E. (E & TC) (Part – II) Examination, 2016
RADAR AND MICROWAVE ENGINEERING**

Day and Date : Monday, 21-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 100

- Instructions:** 1) **All questions are compulsory.**
2) **Figures to the right indicate full marks.**
3) **Q. No. 1 is compulsory. It should be solved in first 30 minutes in Answer Book Page No. 3. Each question carries one mark.**
4) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer : **(1×20=20)**

- 1) Mostly preferred slow wave structure in TWT is
 - a) Zigzag
 - b) Folded line back
 - c) Corrugated waveguide
 - d) Helical
- 2) In case of Magnetron frequency pushing takes place due to _____ variations.
 - a) Supply
 - b) Load
 - c) Frequency
 - d) Amplitude
- 3) _____ type of radar provides continuous range, bearing and elevation data on an object.
 - a) Searching
 - b) Tracking
 - c) Pulsed
 - d) MTI
- 4) The Doppler effect causes a change in what aspect of rf energy that strikes a moving object.
 - a) Phase
 - b) Frequency
 - c) Energy
 - d) None of these
- 5) Accurate Measurement of attenuation can be done by _____ method.
 - a) Power Ratio
 - b) RF substitution
 - c) Using magic Tee
 - d) Using slotted line
- 6) In E plane Tee, if input is given to auxiliary arm, the output from main arms are
 - a) In phase
 - b) 90° out of phase
 - c) 180° out of phase
 - d) 270° out of phase
- 7) An air filled rectangular waveguide of inside dimensions 7 cm × 3.5 cm operates in dominant mode. The cut of frequency is
 - a) 2.14 GHz
 - b) 21.4 GHz
 - c) 2.14 MHz
 - d) 21.4 MHz

P.T.O.

- 8) An air filled rectangular waveguide has dimension of $a = 6$ cm and $b = 4$ cm. The signal frequency is 3 GHz. The phase constant for TE_{10} mode is
 a) 4.73 rad/m b) 24.73 rad/m c) 34.73 rad/m d) 44.73 rad/m
- 9) The characteristic impedance of transmission line is given as $z_0 =$
 a) $\sqrt{z/y}$ b) \sqrt{zy} c) $\sqrt{z+y}$ d) $\sqrt{z-y}$
- 10) The reflection coefficient is generally a complex quantity that can be expressed as $\Gamma_i = |\Gamma_i| e^{j\theta_i}$. Then θ_i for open circuit is
 a) 180° b) 0° c) 90° d) 270°
- 11) In rectangular waveguide, lower order modes are not present in
 a) TE b) TM c) TEM d) TE & TM
- 12) The spacing between the centers of two holes in directional coupler must be
 a) $(n+1)\lambda/4$ b) $(n+2)\lambda/4$ c) $(2n+1)\lambda/4$ d) $n\lambda/4$
- 13) A n type GaAs Gunn diode have a length $L = 210 \mu\text{m}$ with a low field resistance of 16Ω and applied voltage $V = 59$ V. Then the threshold electric field is
 a) 2810 V/cm b) 2800 V/cm c) 2805 V/cm d) 2815 V/cm
- 14) In two valley theory, the negative resistance is achieved only when
 a) $\Delta E = KT$ b) $\Delta E < KT$ c) $\Delta E > KT$ d) None of these
- 15) A typical n type GaAs Gunn diode has electron drift velocity of 10^5 m/s with electric field of 2800 V/cm. Then negative electron mobility is
 a) $-3100 \text{ cm}^2/\text{Vs}$ b) $-1500 \text{ cm}^2/\text{Vs}$ c) $-2500 \text{ cm}^2/\text{Vs}$ d) $-2000 \text{ cm}^2/\text{Vs}$
- 16) TWT is used as
 a) Low noise RF amplifier b) High freq. RF amplifier
 c) Both a) and b) d) None of these
- 17) In TWT electron beam is _____ and RF field is
 a) Travelling, Stationary b) Stationary, Stationary
 c) Travelling, Travelling d) Stationary, travelling
- 18) The maximum theoretical efficiency of two cavity klystron is
 a) 22% b) 58% c) 85% d) 48%
- 19) In reflex klystron as Repeller Voltage is increases output power
 a) Remains constant b) Increases
 c) Decreases d) None of these
- 20) The average power depends on the transmitter power P_t and the duty cycle given by
 a) $P_{avg} = P_t \cdot \text{duty cycle}$ b) $P_{avg} = P_t \cdot \text{pulse width} \cdot \text{prf}$
 c) Both of the above d) None of these

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer : **(1×20=20)**

- 1) In rectangular waveguide, lower order modes are not present in
 - a) TE
 - b) TM
 - c) TEM
 - d) TE & TM
- 2) The spacing between the centers of two holes in directional coupler must be
 - a) $(n + 1) \frac{\lambda}{4}$
 - b) $(n + 2) \frac{\lambda}{4}$
 - c) $(2n + 1) \frac{\lambda}{4}$
 - d) $n \frac{\lambda}{4}$
- 3) A n type GaAs Gunn diode have a length $L = 210 \mu m$ with a low field resistance of 16Ω and applied voltage $V = 59 V$. Then the threshold electric field is
 - a) 2810 V/cm
 - b) 2800 V/cm
 - c) 2805 V/cm
 - d) 2815 V/cm
- 4) In two valley theory, the negative resistance is achieved only when
 - a) $\Delta E = KT$
 - b) $\Delta E < KT$
 - c) $\Delta E > KT$
 - d) None of these
- 5) A typical n type GaAs Gunn diode has electron drift velocity of $10^5 m/s$ with electric field of 2800 V/cm. Then negative electron mobility is
 - a) $-3100 cm^2/Vs$
 - b) $-1500 cm^2/Vs$
 - c) $-2500 cm^2/Vs$
 - d) $-2000 cm^2/Vs$
- 6) TWT is used as
 - a) Low noise RF amplifier
 - b) High freq. RF amplifier
 - c) Both a) and b)
 - d) None of these
- 7) In TWT electron beam is _____ and RF field is
 - a) Travelling, Stationary
 - b) Stationary, Stationary
 - c) Travelling, Travelling
 - d) Stationary, travelling
- 8) The maximum theoretical efficiency of two cavity klystron is
 - a) 22%
 - b) 58%
 - c) 85%
 - d) 48%

P.T.O.

- 9) In reflex klystron as Repeller Voltage is increases output power
 - a) Remains constant
 - b) Increases
 - c) Decreases
 - d) None of these
- 10) The average power depends on the transmitter power P_t and the duty cycle given by
 - a) $P_{avg} = P_t \times \text{duty cycle}$
 - b) $P_{avg} = P_t \times \text{pulse width} \times \text{prf}$
 - c) Both of the above
 - d) None of these
- 11) Mostly preferred slow wave structure in TWT is
 - a) Zigzag
 - b) Folded line back
 - c) Corrugated waveguide
 - d) Helical
- 12) In case of Magnetron frequency pushing takes place due to _____ variations.
 - a) Supply
 - b) Load
 - c) Frequency
 - d) Amplitude
- 13) _____ type of radar provides continuous range, bearing and elevation data on an object.
 - a) Searching
 - b) Tracking
 - c) Pulsed
 - d) MTI
- 14) The Doppler effect causes a change in what aspect of rf energy that strikes a moving object.
 - a) Phase
 - b) Frequency
 - c) Energy
 - d) None of these
- 15) Accurate Measurement of attenuation can be done by _____ method.
 - a) Power Ratio
 - b) RF substitution
 - c) Using magic Tee
 - d) Using slotted line
- 16) In E plane Tee, if input is given to auxiliary arm, the output from main arms are
 - a) In phase
 - b) 90° out of phase
 - c) 180° out of phase
 - d) 270° out of phase
- 17) An air filled rectangular waveguide of inside dimensions $7 \text{ cm} \times 3.5 \text{ cm}$ operates in dominant mode. The cut of frequency is
 - a) 2.14 GHz
 - b) 21.4 GHz
 - c) 2.14 MHz
 - d) 21.4 MHz
- 18) An air filled rectangular waveguide has dimension of $a = 6 \text{ cm}$ and $b = 4 \text{ cm}$. The signal frequency is 3 GHz. The phase constant for TE_{10} mode is
 - a) 4.73 rad/m
 - b) 24.73 rad/m
 - c) 34.73 rad/m
 - d) 44.73 rad/m
- 19) The characteristic impedance of transmission line is given as $z_0 =$
 - a) $\sqrt{z/y}$
 - b) \sqrt{zy}
 - c) $\sqrt{z+y}$
 - d) $\sqrt{z-y}$
- 20) The reflection coefficient is generally a complex quantity that can be expressed as $\Gamma_i = |\Gamma_i| e^{j\theta_i}$. Then θ_i for open circuit is
 - a) 180°
 - b) 0°
 - c) 90°

**T.E. (E & TC) (Part – II) Examination, 2016
RADAR AND MICROWAVE ENGINEERING**

Day and Date : Monday, 21-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 80

SECTION – I

2. Attempt **any four** : **(4×5=20)**

- 1) A transmission line has characteristic impedance of $z_0 = 50 \Omega$ and resistance of $0.1 \Omega / \text{m}$. If the line is distortionless then calculate attenuation constant of line.
- 2) Show that TM_{01} and TM_{10} modes in a rectangular waveguide do not exist.
- 3) What is the importance of negative resistance. How this resistance is achieved in Tunnel diode ?
- 4) Explain in detail measurement of unknown impedance using magic Tee.
- 5) Derive field equation for TE_{mn} mode.

3. Attempt **any two** : **(2×10=20)**

- 1) Derive the relation between reflection coefficient and transmission coefficient of transmission line. Explain the steps which are used for calculation of these values with Smith chart by taking one example.
- 2) The longitudinal component of the magnetic field inside an air filled rectangular waveguide made of a perfect electric conductor is given by following expression.

$$H_z = 0.1 \cos (25 \pi x) \cos (30.3 \pi y) \cos (12 \pi \times 10^9 t - \beta z)$$

The cross sectional dimensions of the waveguide are given as $a = 0.08 \text{ m}$ and $b = 0.033 \text{ m}$. Also calculate cut off frequency and guide wavelength of that mode.

- 3) Explain the working of two hole directional coupler and discuss the performance parameters of directional coupler.

SECTION – II

4. Answer **any four** : (4×5=20)

- Calculate maximum range of radar system which operates at 3 cm with peak pulse power of 600 kW if its antenna is 5 m^2 , minimum detectable signal is 10^{-13} W and the radar cross sectional area of the target is 20 m^2 .
- Draw a neat sketch of two cavity klystron amplifier. With the help of applegate diagram explain its working.
- Explain in A-scope and PPI Radar displays along with its limitations.
- Explain Phase shift measurement technique.
- Derive theoretical efficiency of reflex klystron.

5. Answer **any two** : (2×10=20)

- Write similarities and differences between TWT and Klystron. Explain construction and working of TWT.
- X band cylindrical magnetron has following parameters.
Anode voltage = 26 kV
Beam current = 27 A
Magnetic flux density = 0.336 wb/m^2
Cathode radius = 5 cm
Anode radius = 10 cm
Calculate :
 - Cyclotron angular frequency
 - Hull's cut-off voltage
 - Cut-off magnetic flux density for given voltage.
- Draw block diagram and explain types of radars and its functions.

The Complete Smith Chart

Black Magic Design

Set **P**

Total Marks : 100

MCQ/Objective Type Questions

Marks : 20

d) 00-0F

P.T.O.

- 9) Which of the following commands will move the number 27 H into the accumulator ?
 - a) MOV A, P27
 - b) MOV A, #27H
 - c) MOV A, 27H
 - d) MOV A, @27
- 10) When the 8051 is reset and the EA line is LOW, the program counter points to the first program instruction in the
 - a) Internal code memory
 - b) Internal data memory
 - c) External code memory
 - d) External data memory
- 11) PIC 16F877 devices _____ bit program counter capable of addressing _____ program memory.
 - a) 8,256 K × 8
 - b) 16, 64 K × 8
 - c) 13, 8 K × 14
 - d) 14, 8 K × 13
- 12) Before execution of ANDLW 0 × 5f the working register contents were 0 × A3. The contents after execution will be
 - a) 0 × 5f
 - b) 0 × 03
 - c) 0 × FF
 - d) None of these
- 13) After stack has been pushed eight times, the ninth push is
 - a) Result in loss of pushed data
 - b) Sets stack overflow bit
 - c) Overwrites the value that was stored from the first push
 - d) Overwrites the value that was stored from the last push
- 14) Interrupt flag bit get set when on interrupt condition occurs, regardless of state of its corresponding enable bit or global enable bit the statement is
 - a) True for maskable interrupts only
 - b) True for all interrupt
 - c) False for all interrupts
 - d) None of these
- 15) RTC DS1307 support _____ protocol.
 - a) I2C
 - b) SPI
 - c) PSP
 - d) All of the above
- 16) How many bytes of RAM is the RTC DS 1307 are set aside for the clock and data ?
 - a) 8 byte
 - b) 56 byte
 - c) 7 byte
 - d) 128 byte
- 17) In capture mode which timer is used ?
 - a) Timer 0
 - b) Timer 1
 - c) Timer 2
 - d) Timer 3
- 18) In compare mode _____ is used.
 - a) Timer 0
 - b) Timer 1
 - c) Timer 2
 - d) Timer 3
- 19) CCP means _____
 - a) Capture Control Protocol
 - b) Capture/Compare PWM
 - c) Compare Control Protocol
 - d) None of the above
- 20) The PWM period is specified by _____
 - a) PR2
 - b) TMR2
 - c) CCPCON
 - d) None of the above

**T.E. (Electronics and Telecommunication) (Part – II) Examination, 2016
MICROCONTROLLER AND APPLICATIONS**

Day and Date : Tuesday, 22-11-2016

Marks : 80

Time : 10.00 a.m. to 1.00 p.m.

Instructions: 1) *All questions are compulsory.*
2) *Assume suitable data if necessary.*

2. Attempt **any four** : **(4×5=20)**

- 1) Write a program in assembly or “C” language to generate a square wave of 1 KHz with 50% duty cycle on P1.5 pin of 8051 microcontroller. Use timer 0 to generate the delay.
- 2) Describe serial modes of 8051 microcontroller.
- 3) Explain the ports of 8051 microcontroller used for external memory access.
- 4) Draw and explain the formats of SFRs
 - 1) SCON
 - 2) PCON.
- 5) Draw pin-out of 14 pin LCD display and state the functions of
 - 1) RS
 - 2) EN
 - 3) R/W.

3. Attempt **any two** : **(2×10=20)**

- 1) Write assembly or “C” language program to transfer the message “SOLAPUR” serially at baud rate 4800, 8 bit data and 1 stop bit.
- 2) Draw the labeled diagram of interfacing DAC with 8051 microcontroller. Write a program in assembly or “C” language to generate a saw-tooth waveform.
- 3) What are the steps in executing an interrupts ? Explain in detail all the six interrupts in 8051.

4. Answer **any four** : **(4×5=20)**
- 1) Explain A/D conversion in PIC16F877.
 - 2) Explain logical instruction related to PIC.
 - 3) Explain how data is transferred using inter integrated circuit bus.
 - 4) Write a note on watchdog timer.
 - 5) List the feature of PIC microcontroller.
 - 6) Explain interrupts in PIC 16F877.
5. Answer **any two** : **(2×10=20)**
- 1) Explain in details I²C module. Explain how to initialize MSSP module in I²C mode.
 - 2) Explain PCON, OPTION and STATUS registers of 16F877 and explain memory mapping in it.
 - 3) Explain the different memories available in PIC 16F877.
-

Q

T.E. (Electronics and Telecommunication) (Part – II) Examination, 2016
MICROCONTROLLER AND APPLICATIONS

Day and Date : Tuesday, 22-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Total Marks : 100

- Instructions :**
- 1) **All questions are compulsory.**
 - 2) Assume suitable data **if necessary.**
 - 3) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - 4) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

- 1) How many bytes of RAM is the RTC DS 1307 are set aside for the clock and data ?
a) 8 byte b) 56 byte c) 7 byte d) 128 byte
- 2) In capture mode which timer is used ?
a) Timer 0 b) Timer 1 c) Timer 2 d) Timer 3
- 3) In compare mode _____ is used.
a) Timer 0 b) Timer 1 c) Timer 2 d) Timer 3
- 4) CCP means _____
a) Capture Control Protocol b) Capture/Compare PWM
c) Compare Control Protocol d) None of the above
- 5) The PWM period is specified by _____
a) PR2 b) TMR2
c) CCPCON d) None of the above
- 6) The following program will receive data from port 1, determine whether bit 2 is high and then send the number FFH to port 3
READ : MOV A, P1
ANL A, #2H
CJNE A, #02H, READ
MOV P3, #FFH
a) True b) False
- 7) Device pins XTAL1 and XTAL2 for the 8051 are used for connections to an external oscillator or crystal.
a) True b) False

P.T.O.

- 8) The total external data memory that can be interfaced to the 8051 is
a) 32 K b) 64 K c) 128 K d) 256 K
- 9) The 8051 has _____ parallel I/O ports.
a) 2 b) 3 c) 4 d) 5
- 10) How many timers available in 8051 ?
a) 2 b) 8 c) 4 d) 6
- 11) The internal RAM memory of 8051 is
a) 64 bytes b) 128 bytes c) 32 bytes d) 256 bytes
- 12) After reset SP settles at the address
a) 1 H b) 0 H c) 7 H d) 6 H
- 13) On power up, the 8051 uses which RAM locations for register R0-R7
a) 00-2F b) 00-7F c) 00-07 d) 00-0F
- 14) Which of the following commands will move the number 27 H into the accumulator ?
a) MOV A, P27 b) MOV A, #27H
c) MOV A, 27H d) MOV A, @27
- 15) When the 8051 is reset and the EA line is LOW, the program counter points to the first program instruction in the
a) Internal code memory b) Internal data memory
c) External code memory d) External data memory
- 16) PIC 16F877 devices _____ bit program counter capable of addressing _____ program memory.
a) 8,256 K × 8 b) 16, 64 K × 8 c) 13, 8 K × 14 d) 14, 8 K × 13
- 17) Before execution of ANDLW 0 × 5f the working register contents were 0 × A3. The contents after execution will be
a) 0 × 5f b) 0 × 03 c) 0 × FF d) None of these
- 18) After stack has been pushed eight times, the ninth push is
a) Result in loss of pushed data
b) Sets stack overflow bit
c) Overwrites the value that was stored from the first push
d) Overwrites the value that was stored from the last push
- 19) Interrupt flag bit get set when on interrupt condition occurs, regardless of state of its corresponding enable bit or global enable bit the statement is
a) True for maskable interrupts only b) True for all interrupt
c) False for all interrupts d) None of these
- 20) RTC DS1307 support _____ protocol.
a) I2C b) SPI c) PSP d) All of the above

T.E. (E & TC) (Part – II) Examination, 2016
ELECTRONICS APPLICATIONS AND SYSTEM DESIGN

Day and Date : Wednesday, 23-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 100

- Instructions :**
- 1) **All questions are compulsory.**
 - 2) **Figures to the right indicate full marks.**
 - 3) **Assume suitable data if necessary.**
 - 4) **Q. No. 1 is compulsory. It should be solved in first 30 minutes in Answer Book Page No. 3. Each question carries one mark.**
 - 5) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

I. Choose the correct answer :

20

- 1) The turn-off time of a thyristor effects its
 - A) Operating voltage
 - B) Operating frequency
 - C) Overload capacity
 - D) Thermal behaviour
- 2) Consider the following statements :
 - i) DIAC is a two electrode, bidirectional avalanche diode
 - ii) DIAC can be switched from OFF state to ON state for either polarity of applied voltage
 - iii) DIAC exhibits negative resistance property
 - iv) DIAC is used mainly for triggering a TRIAC

Of these statements, the following are correct

 - A) i, ii and iii
 - B) ii, iii and iv
 - C) i, iii and iv
 - D) All of the above
- 3) In a single phase bridge converter, for firing angle $\alpha = 0$, the dc output voltage is
 - A) V_m/π
 - B) $2 V_m/\pi$
 - C) $\sqrt{2} V_m/\pi$
 - D) $V_m/\sqrt{2} \pi$
- 4) In a single phase full wave converter with freewheel diode, with firing angle of 60° , and amplitude of input voltage to each thyristor V_m of 100 volts, the dc output voltage is about
 - A) $100/\pi$ Volts
 - B) $150/\pi$ Volts
 - C) $50/\pi$ Volts
 - D) 150 Volts
- 5) A fully controlled converter implies a converter in which
 - A) All rectifying elements are pn diodes
 - B) Rectifying elements are both thyristors and diodes
 - C) All rectifying elements are thyristors or power transistors
 - D) Freewheeling diode is used
- 6) A single phase fully controlled converter with highly inductive load and freewheeling diode provides _____ direction of voltage and _____ direction of current.
 - A) positive, negative
 - B) positive, positive
 - C) negative, negative
 - D) negative, positive

P.T.O.

- 7) In SCR angle of conduction can be varied by changing
A) Anode voltage B) Anode current
C) Forward current rating D) Gate current
- 8) In a PLL frequency synthesizer, a value of divide-by-N network varies from 10 to 999 in a single steps increment with $f_{in} = 1$ KHz. What is the value of synthesizer output ?
A) 1 KHz to 999 KHz in 1 KHz increments
B) 10 KHz to 9990 KHz in 1 KHz increments
C) 10 KHz to 999 KHz in 1 KHz increments
D) 1 KHz to 9990 KHz in 1 KHz increments
- 9) Which of the following PLL has very low power consumption ?
A) 565 B) 4046 C) Both (A) and (B) D) None of these
- 10) IC 1596 is a
A) Frequency counter B) Digital voltmeter
C) Low signal amplifier D) Balanced modulator-demodulator
- 11) Which of following temperature sensor has sensitivity 10 mV/°C ?
A) LM35 B) J-type thermocouple
C) PT100 D) None of above
- 12) In XR 2240 if both trigger and reset signal are applied simultaneously then
A) Trigger is activated B) Reset is activated
C) Both (A) and (B) D) Can't say
- 13) Divide by 2 network is used in the path of low frequency signal in which of following measurement ?
A) Frequency B) Time period C) Both (A) and (B) D) None of these
- 14) A high level signal on display select input, display output of
A) Latches B) Counters C) Both (A) and (B) D) None of these
- 15) Which of the following characteristics are required for selection of instrumentation amplifier ?
A) High input impedance B) High CMRR
C) Both (A) and (B) D) None of these
- 16) Which of the following is self-powered temperature sensor ?
A) Thermocouple B) Thermistor C) RTD D) LM 35
- 17) The first instruction on the rung must always be an
A) Input instruction B) Output instruction
C) (A) or (B) D) All of these
- 18) For input voltage range of 0-2V, $t_2 = 2000$, required DVM display is
A) 2 digit B) 3 digit C) $3\frac{1}{2}$ digit D) 4 digit
- 19) In ON-OFF controller, error voltage (V_e) is given by
A) $V_e = V_{SP} + V_{PV}$ B) $V_e = V_{SP} - V_{PV}$ C) $V_e = V_{PV} - V_{SP}$ D) $V_e = V_{PV} * V_{SP}$
- 20) The number of displays required to count frequency 1 MHz with 1 Hz accuracy using IC74926 are
A) 3 B) 4 C) 5 D) 6

T.E. (E & TC) (Part – II) Examination, 2016
ELECTRONICS APPLICATIONS AND SYSTEM DESIGN

Day and Date : Wednesday, 23-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 80

- Instructions :** 1) **All** questions are **compulsory**.
2) Figures to the **right** indicate full marks.
3) Assume suitable data **if** necessary.

SECTION – I

II. Answer **any four** : **20**

- i) Explain two transistor analogy of an SCR.
- ii) Discuss the construction of TRIAC and with V-I characteristics, explain its working.
- iii) Explain the working of balanced modulator IC 1596 with neat circuit diagram.
- iv) How AC power control is achieved using DIAC and TRIAC for lamp dimmer ?
- v) Write a note on dielectric heating.

III. A) Answer **any one** : **10**

- i) With the help of circuit diagram and waveform explain single phase half wave controlled rectifier with inductive load and freewheeling diode. Derive an expression for average load voltage, current and RMS load voltage.
- ii) Design a frequency synthesizer using PLL CD 4046 to generate a frequency of 1 KHz to 999 KHz. Use 4.43 MHz crystal.

B) Design a frequency synthesizer using PLL 565 to obtain 100 KHz frequency signal using 50 Hz AC mains as input. **10**

SECTION – II

IV. Attempt **any three** : **15**

- 1) Compare thermocouple and RTD.
- 2) Design a timer using XR2240 to generate a delay of 220 seconds.
- 3) Design a zero and span circuit to convert input voltage range of -3.5 V to 3.5 V into 0 to 10 V.
- 4) Draw and explain PLC architecture.

Set P

V. Attempt **any two** :**15**

- 1) Design a proportional controller to control pressure in the range of 2 psi to 15 psi.
Set point : 10 psi
Proportional band : 25%
Assume the sensitivity is 10 mV/psi
- 2) Draw and explain ladder diagram for bottle filling plant system.
- 3) Design an ON-OFF temperature controller for temperature range of 0°C to 500°C. Set point must be adjustable between 200°C to 300°C with dead band 10°C. Use J type thermocouple.

VI. Attempt **any one** :**10**

- 1) Design a frequency measurement set up to measure frequency up to 10 MHz with 0.1 Hz accuracy. Use IC 74926.
 - 2) Design a $3\frac{1}{2}$ digit DVM for measurement of $V_{in} = \pm 2V$.
-

 - 4) **Q. No. 1 is compulsory. It should be solved in first 30 minutes in Answer Book Page No. 3. Each question carries one mark.**
 - 5) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

I. Choose the correct answer :

20

- 1) Which of the following is self-powered temperature sensor ?
A) Thermocouple B) Thermistor C) RTD D) LM 35
- 2) The first instruction on the rung must always be an
A) Input instruction B) Output instruction
C) (A) or (B) D) All of these
- 3) For input voltage range of 0-2V, $t_2 = 2000$, required DVM display is
A) 2 digit B) 3 digit C) $3\frac{1}{2}$ digit D) 4 digit
- 4) In ON-OFF controller, error voltage (V_e) is given by
A) $V_e = V_{SP} + V_{PV}$ B) $V_e = V_{SP} - V_{PV}$ C) $V_e = V_{PV} - V_{SP}$ D) $V_e = V_{PV} * V_{SP}$
- 5) The number of displays required to count frequency 1 MHz with 1 Hz accuracy using IC74926 are
A) 3 B) 4 C) 5 D) 6
- 6) The turn-off time of a thyristor effects its
A) Operating voltage B) Operating frequency
C) Overload capacity D) Thermal behaviour
- 7) Consider the following statements :
 - i) DIAC is a two electrode, bidirectional avalanche diode
 - ii) DIAC can be switched from OFF state to ON state for either polarity of applied voltage
 - iii) DIAC exhibits negative resistance property
 - iv) DIAC is used mainly for triggering a TRIAC

Of these statements, the following are correct

- A) i, ii and iii B) ii, iii and iv C) i, iii and iv D) All of the above
- 8) In a single phase bridge converter, for firing angle $\alpha = 0$, the dc output voltage is
A) V_m/π B) $2 V_m/\pi$ C) $\sqrt{2} V_m/\pi$ D) $V_m/\sqrt{2}\pi$

P.T.O.

- 9) In a single phase full wave converter with freewheel diode, with firing angle of 60° , and amplitude of input voltage to each thyristor V_m of 100 volts, the dc output voltage is about
A) $100/\pi$ Volts B) $150/\pi$ Volts C) $50/\pi$ Volts D) 150 Volts
- 10) A fully controlled converter implies a converter in which
A) All rectifying elements are pn diodes
B) Rectifying elements are both thyristors and diodes
C) All rectifying elements are thyristors or power transistors
D) Freewheeling diode is used
- 11) A single phase fully controlled converter with highly inductive load and freewheeling diode provides _____ direction of voltage and _____ direction of current.
A) positive, negative B) positive, positive
C) negative, negative D) negative, positive
- 12) In SCR angle of conduction can be varied by changing
A) Anode voltage B) Anode current
C) Forward current rating D) Gate current
- 13) In a PLL frequency synthesizer, a value of divide-by-N network varies from 10 to 999 in a single steps increment with $f_{in} = 1$ KHz. What is the value of synthesizer output ?
A) 1 KHz to 999 KHz in 1 KHz increments
B) 10 KHz to 9990 KHz in 1 KHz increments
C) 10 KHz to 999 KHz in 1 KHz increments
D) 1 KHz to 9990 KHz in 1 KHz increments
- 14) Which of the following PLL has very low power consumption ?
A) 565 B) 4046 C) Both (A) and (B) D) None of these
- 15) IC 1596 is a
A) Frequency counter B) Digital voltmeter
C) Low signal amplifier D) Balanced modulator-demodulator
- 16) Which of following temperature sensor has sensitivity $10 \text{ mV}/^\circ\text{C}$?
A) LM35 B) J-type thermocouple
C) PT100 D) None of above
- 17) In XR 2240 if both trigger and reset signal are applied simultaneously then
A) Trigger is activated B) Reset is activated
C) Both (A) and (B) D) Can't say
- 18) Divide by 2 network is used in the path of low frequency signal in which of following measurement ?
A) Frequency B) Time period C) Both (A) and (B) D) None of these
- 19) A high level signal on display select input, display output of
A) Latches B) Counters C) Both (A) and (B) D) None of these
- 20) Which of the following characteristics are required for selection of instrumentation amplifier ?
A) High input impedance B) High CMRR
C) Both (A) and (B) D) None of these

ELECTRONICS APPLICATIONS AND SYSTEM DESIGN

Day and Date : Wednesday, 23-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 80

- Instructions :** 1) **All** questions are **compulsory**.
2) Figures to the **right** indicate full marks.
3) Assume suitable data **if** necessary.

SECTION – I

II. Answer **any four** : **20**

- i) Explain two transistor analogy of an SCR.
- ii) Discuss the construction of TRIAC and with V-I characteristics, explain its working.
- iii) Explain the working of balanced modulator IC 1596 with neat circuit diagram.
- iv) How AC power control is achieved using DIAC and TRIAC for lamp dimmer ?
- v) Write a note on dielectric heating.

III. A) Answer **any one** : **10**

- i) With the help of circuit diagram and waveform explain single phase half wave controlled rectifier with inductive load and freewheeling diode. Derive an expression for average load voltage, current and RMS load voltage.
- ii) Design a frequency synthesizer using PLL CD 4046 to generate a frequency of 1 KHz to 999 KHz. Use 4.43 MHz crystal.

B) Design a frequency synthesizer using PLL 565 to obtain 100 KHz frequency signal using 50 Hz AC mains as input. **10**

SECTION – II

IV. Attempt **any three** : **15**

- 1) Compare thermocouple and RTD.
- 2) Design a timer using XR2240 to generate a delay of 220 seconds.
- 3) Design a zero and span circuit to convert input voltage range of -3.5 V to 3.5 V into 0 to 10 V.
- 4) Draw and explain PLC architecture.

Set R

V. Attempt **any two** :**15**

- 1) Design a proportional controller to control pressure in the range of 2 psi to 15 psi.
Set point : 10 psi
Proportional band : 25%
Assume the sensitivity is 10 mV/psi
- 2) Draw and explain ladder diagram for bottle filling plant system.
- 3) Design an ON-OFF temperature controller for temperature range of 0°C to 500°C. Set point must be adjustable between 200°C to 300°C with dead band 10°C. Use J type thermocouple.

VI. Attempt **any one** :**10**

- 1) Design a frequency measurement set up to measure frequency up to 10 MHz with 0.1 Hz accuracy. Use IC 74926.
 - 2) Design a $3\frac{1}{2}$ digit DVM for measurement of $V_{in} = \pm 2V$.
-

Max. Marks : 100

Instructions :

- 1) **All** questions are **compulsory**.
- 2) Figures to the **right** indicate full marks.
- 3) **Assume** suitable data if necessary.
- 4) Q. No. **1** is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. **3**. **Each** question carries **one** mark.
- 5) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

I. Choose the correct answer :

20

- 1) A single phase fully controlled converter with highly inductive load and freewheeling diode provides _____ direction of voltage and _____ direction of current.
A) positive, negative
B) positive, positive
C) negative, negative
D) negative, positive
- 2) In SCR angle of conduction can be varied by changing
A) Anode voltage
B) Anode current
C) Forward current rating
D) Gate current
- 3) In a PLL frequency synthesizer, a value of divide-by-N network varies from 10 to 999 in a single steps increment with $f_{in} = 1$ KHz. What is the value of synthesizer output ?
A) 1 KHz to 999 KHz in 1 KHz increments
B) 10 KHz to 9990 KHz in 1 KHz increments
C) 10 KHz to 999 KHz in 1 KHz increments
D) 1 KHz to 9990 KHz in 1 KHz increments
- 4) Which of the following PLL has very low power consumption ?
A) 565
B) 4046
C) Both (A) and (B)
D) None of these
- 5) IC 1596 is a
A) Frequency counter
B) Digital voltmeter
C) Low signal amplifier
D) Balanced modulator-demodulator
- 6) Which of following temperature sensor has sensitivity 10 mV/°C ?
A) LM35
B) J-type thermocouple
C) PT100
D) None of above
- 7) In XR 2240 if both trigger and reset signal are applied simultaneously then
A) Trigger is activated
B) Reset is activated
C) Both (A) and (B)
D) Can't say

P.T.O.

- 8) Divide by 2 network is used in the path of low frequency signal in which of following measurement ?
 A) Frequency B) Time period C) Both (A) and (B) D) None of these
- 9) A high level signal on display select input, display output of
 A) Latches B) Counters C) Both (A) and (B) D) None of these
- 10) Which of the following characteristics are required for selection of instrumentation amplifier ?
 A) High input impedance B) High CMRR
 C) Both (A) and (B) D) None of these
- 11) Which of the following is self-powered temperature sensor ?
 A) Thermocouple B) Thermistor C) RTD D) LM 35
- 12) The first instruction on the rung must always be an
 A) Input instruction B) Output instruction
 C) (A) or (B) D) All of these
- 13) For input voltage range of 0-2V, $t_2 = 2000$, required DVM display is
 A) 2 digit B) 3 digit C) $3\frac{1}{2}$ digit D) 4 digit
- 14) In ON-OFF controller, error voltage (V_e) is given by
 A) $V_e = V_{SP} + V_{PV}$ B) $V_e = V_{SP} - V_{PV}$ C) $V_e = V_{PV} - V_{SP}$ D) $V_e = V_{PV} * V_{SP}$
- 15) The number of displays required to count frequency 1 MHz with 1 Hz accuracy using IC74926 are
 A) 3 B) 4 C) 5 D) 6
- 16) The turn-off time of a thyristor effects its
 A) Operating voltage B) Operating frequency
 C) Overload capacity D) Thermal behaviour
- 17) Consider the following statements :
 i) DIAC is a two electrode, bidirectional avalanche diode
 ii) DIAC can be switched from OFF state to ON state for either polarity of applied voltage
 iii) DIAC exhibits negative resistance property
 iv) DIAC is used mainly for triggering a TRIAC
- Of these statements, the following are correct
 A) i, ii and iii B) ii, iii and iv C) i, iii and iv D) All of the above
- 18) In a single phase bridge converter, for firing angle $\alpha = 0$, the dc output voltage is
 A) V_m/π B) $2 V_m/\pi$ C) $\sqrt{2} V_m/\pi$ D) $V_m/\sqrt{2} \pi$
- 19) In a single phase full wave converter with freewheel diode, with firing angle of 60° , and amplitude of input voltage to each thyristor V_m of 100 volts, the dc output voltage is about
 A) $100/\pi$ Volts B) $150/\pi$ Volts C) $50/\pi$ Volts D) 150 Volts
- 20) A fully controlled converter implies a converter in which
 A) All rectifying elements are pn diodes
 B) Rectifying elements are both thyristors and diodes
 C) All rectifying elements are thyristors or power transistors
 D) Freewheeling diode is used

T.E. (E & TC) (Part – II) Examination, 2016
ELECTRONICS APPLICATIONS AND SYSTEM DESIGN

Day and Date : Wednesday, 23-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 80

- Instructions :** 1) **All** questions are **compulsory**.
2) Figures to the **right** indicate full marks.
3) Assume suitable data **if** necessary.

SECTION – I

II. Answer **any four** : **20**

- i) Explain two transistor analogy of an SCR.
- ii) Discuss the construction of TRIAC and with V-I characteristics, explain its working.
- iii) Explain the working of balanced modulator IC 1596 with neat circuit diagram.
- iv) How AC power control is achieved using DIAC and TRIAC for lamp dimmer ?
- v) Write a note on dielectric heating.

III. A) Answer **any one** : **10**

- i) With the help of circuit diagram and waveform explain single phase half wave controlled rectifier with inductive load and freewheeling diode. Derive an expression for average load voltage, current and RMS load voltage.
- ii) Design a frequency synthesizer using PLL CD 4046 to generate a frequency of 1 KHz to 999 KHz. Use 4.43 MHz crystal.

B) Design a frequency synthesizer using PLL 565 to obtain 100 KHz frequency signal using 50 Hz AC mains as input. **10**

SECTION – II

IV. Attempt **any three** : **15**

- 1) Compare thermocouple and RTD.
- 2) Design a timer using XR2240 to generate a delay of 220 seconds.
- 3) Design a zero and span circuit to convert input voltage range of -3.5 V to 3.5 V into 0 to 10 V.
- 4) Draw and explain PLC architecture.

Set S

V. Attempt **any two** :**15**

- 1) Design a proportional controller to control pressure in the range of 2 psi to 15 psi.
Set point : 10 psi
Proportional band : 25%
Assume the sensitivity is 10 mV/psi
- 2) Draw and explain ladder diagram for bottle filling plant system.
- 3) Design an ON-OFF temperature controller for temperature range of 0°C to 500°C. Set point must be adjustable between 200°C to 300°C with dead band 10°C. Use J type thermocouple.

VI. Attempt **any one** :**10**

- 1) Design a frequency measurement set up to measure frequency up to 10 MHz with 0.1 Hz accuracy. Use IC 74926.
 - 2) Design a $3\frac{1}{2}$ digit DVM for measurement of $V_{in} = \pm 2V$.
-

**T.E. (E & TC) (Part – II) Examination, 2016
OPTICAL COMMUNICATION**

Day and Date : Thursday, 24-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 100

- Instructions :**
- **All questions are compulsory.**
 - **Assume** suitable data if required.
 - Figures to **right** indicates **full** marks..
 - **Q. No. 1 is compulsory.** It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) The angles of incidence ϕ_1 and refraction ϕ_2 are related to each other and to the refractive indices of the dielectrics n_1 and n_2 and are given by Snell's law of refraction as
 - A) $n_1 \sin \phi_1 = n_2 \sin \phi_2$
 - B) $n_1 \cos \phi_1 = n_2 \cos \phi_2$
 - C) $n_1 \cos \phi_2 = n_2 \cos \phi_1$
 - D) $n_1 \sin \phi_2 = n_2 \sin \phi_1$
- 2) The numerical aperture is a measure of
 - A) The light scattering ability of the fiber
 - B) Dispersion of the fiber
 - C) The light collecting ability of the fiber
 - D) Attenuation of the fiber
- 3) Cutoff wavelength of an optical fiber is the wavelength
 - A) Above which the fiber becomes single moded
 - B) Below which the fiber becomes single moded
 - C) Above which no mode is supported
 - D) Below which no mode is supported
- 4) The mean optical power launched into an 8 km fiber is $120 \mu W$ and the mean optical power at the output is $3 \mu W$. The signal attenuation per km for the fiber is
 - A) 16 dB/km
 - B) 8 dB/km
 - C) 4 dB/km
 - D) 2 dB/km
- 5) Macrobending losses can be avoided by
 - A) Operating at longest wavelengths possible
 - B) Designing the fibers with large relative refractive index differences
 - C) Designing the fibers with small relative refractive index differences
 - D) None of above
- 6) The Vapor Axial Deposition (VAD) process is
 - A) A batch process
 - B) A continuous process
 - C) Outside layer deposition process
 - D) Inside layer deposition process
- 7) Star couplers are generally used for distributing a
 - A) Single input signal to multiple outputs
 - B) Multiple input signals to single output
 - C) Multiple input signal to multiple outputs
 - D) None of these

P.T.O.

- 8) LASER is a _____ type of source.
A) Coherent B) Non-coherent C) Spontaneous D) None of these
- 9) A GaAs injection LASER has a total efficiency of 18%. If the voltage applied to the device is 2.5 V and the bandgap energy of GaAs is 1.43 eV, the external power efficiency of the device is
A) 10% B) 31.47% C) 3.18% D) 9.71%
- 10) Which of the following is best single-frequency injection LASER ?
A) Index guided LASER B) Gain guided LASER
C) Double hetero junction LASER D) Distributed feedback LASER
- 11) At 1.3 μm wavelength, the edge emitting LED device exhibits _____ temperature dependence than the surface emitter.
A) Less B) Moderate C) Greater D) No
- 12) A photodiode has a quantum efficiency of 70% when photons of energy 1.8×10^{-19} J are incident upon it, then the responsivity of the photodiode is
A) 0.694 B) 0.723 C) 0.369 D) 0.623
- 13) The carrier velocities of approximately 10^7 cm/s of a depletion layer width of 10 μm . The transit time is
A) 0.1 ns B) 0.3 ns C) 0.13 ns D) 0.2 ns
- 14) The optical power generated internally by LED is
A) $P_{\text{int}} = \eta_{\text{int}} \left(\frac{ci}{e\lambda} \right)$ B) $P_{\text{int}} = \eta_{\text{int}} \left(\frac{i}{e} \right) hf$ C) $P_{\text{int}} = \eta_{\text{int}} \left(\frac{nci}{e} \right) hf$ D) $P_{\text{int}} = \eta_{\text{int}} \left(\frac{i}{e} \right)$
- 15) The common method for time domain dispersion measurement is
A) Multimode optical fiber B) Single step index optical fiber
C) Single graded index optical fiber D) All plastic fiber
- 16) Which method is employed for interferometric measurement ?
A) Transmitted light interferometer B) Reflected light interferometer
C) Refracted light interferometer D) Both A) and B)
- 17) The LED can operate at _____ than the injection laser.
A) Higher current density B) Lower current density
C) Higher power D) None of these
- 18) The requirement of detector is
A) High fidelity B) Larger size
C) More numerical aperture D) All the above
- 19) The detail knowledge of the refractive index profile enables the
A) Impulse response of fiber B) Transient response
C) Both A) and B) D) None of above
- 20) The response of Avalanche photodiode is limited by
A) The transit time of the carrier across the absorption region
B) Diffusion time of carriers
C) Both A) and B)
D) None of above

T.E. (E & TC) (Part – II) Examination, 2016
OPTICAL COMMUNICATION

Day and Date : Thursday, 24-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 80

- Instructions :**
- **All** questions are **compulsory**.
 - **Assume** suitable data if required.
 - Figures to **right** indicates **full** marks..

SECTION – I

2. A) Solve **any three** of the following : **(3×4=12)**

- 1) Explain the general block diagram of an optical communication system.
- 2) Explain phase velocity and group velocity.
- 3) Explain Rayleigh scattering loss in optical fiber.
- 4) Explain different types of fiber alignment losses.

B) A ruby laser contains a crystal of length 4 cm with a refractive index of 1.78. The peak emission wavelength from the device is $0.55\mu\text{m}$. Determine the number of longitudinal modes and their frequency separation.

8

3. A) Solve **any two** of the following : **(2×6=12)**

- 1) Explain double crucible method of fiber drawing. What are its advantages and drawbacks ?
- 2) Explain any two methods of mechanical splicing techniques used for splicing single optical fibers.
- 3) Explain injection laser characteristics.

B) Silica has an estimated fictive temperature of 1400°K with an isothermal compressibility of $7 \times 10^{-11} \text{ m}^2/\text{N}$. The refractive index and the photoelastic coefficient for silica are 1.46 and 0.286 respectively. Determine the theoretical attenuation in dB/Km due to fundamental Rayleigh scattering in silica at optical wavelength of $1\mu\text{m}$. Boltzmann's constant is $1.381 \times 10^{-21} \text{ J/}^\circ\text{K}$.

8

SECTION – II

4. a) Attempt **any three** questions : **(3×4=12)**
- 1) Explain the different advantages and disadvantages of LED as compare to laser.
 - 2) Explain the various parameters effecting the speed of response of detectors.
 - 3) Explain the total fiber attenuation measurement.
 - 4) The carrier velocity in a silicon p-i-n diode with $25\mu\text{m}$ depletion layer width is $3\times 10^4\text{ m/s}$. Determine the maximum response time for the device.
- b) Compare the electrical and optical bandwidths for an optical fiber communication system and develop a relationship between them. **8**
5. a) Attempt **any two** questions : **(2×6=12)**
- 1) Explain the principle of optical detector.
 - 2) Explain the structure of surface emitting LED.
 - 3) Explain in detail the transmitter design and its requirements.
- b) The radiative and non-radiative recombination life times of minority carriers in the active region of a double heterojunction LED are 60 ns and 100 ns respectively. Determine the total carrier recombination life time and the power internally generated within the device when the peak emission wavelength is $0.9\mu\text{m}$ at a device current of 40 mA. **8**

T.E. (E & TC) (Part – II) Examination, 2016
OPTICAL COMMUNICATION

Day and Date : Thursday, 24-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 80

- Instructions :**
- **All** questions are **compulsory**.
 - **Assume** suitable data if required.
 - Figures to **right** indicates **full** marks..

SECTION – I

2. A) Solve **any three** of the following : **(3×4=12)**

- 1) Explain the general block diagram of an optical communication system.
- 2) Explain phase velocity and group velocity.
- 3) Explain Rayleigh scattering loss in optical fiber.
- 4) Explain different types of fiber alignment losses.

B) A ruby laser contains a crystal of length 4 cm with a refractive index of 1.78. The peak emission wavelength from the device is $0.55\mu\text{m}$. Determine the number of longitudinal modes and their frequency separation.

8

3. A) Solve **any two** of the following : **(2×6=12)**

- 1) Explain double crucible method of fiber drawing. What are its advantages and drawbacks ?
- 2) Explain any two methods of mechanical splicing techniques used for splicing single optical fibers.
- 3) Explain injection laser characteristics.

B) Silica has an estimated fictive temperature of 1400°K with an isothermal compressibility of $7 \times 10^{-11} \text{ m}^2/\text{N}$. The refractive index and the photoelastic coefficient for silica are 1.46 and 0.286 respectively. Determine the theoretical attenuation in dB/Km due to fundamental Rayleigh scattering in silica at optical wavelength of $1\mu\text{m}$. Boltzmann's constant is $1.381 \times 10^{-21} \text{ J/}^\circ\text{K}$.

8

SECTION – II

4. a) Attempt **any three** questions : **(3×4=12)**
- 1) Explain the different advantages and disadvantages of LED as compare to laser.
 - 2) Explain the various parameters effecting the speed of response of detectors.
 - 3) Explain the total fiber attenuation measurement.
 - 4) The carrier velocity in a silicon p-i-n diode with $25\mu\text{m}$ depletion layer width is $3\times 10^4\text{ m/s}$. Determine the maximum response time for the device.
- b) Compare the electrical and optical bandwidths for an optical fiber communication system and develop a relationship between them. **8**
5. a) Attempt **any two** questions : **(2×6=12)**
- 1) Explain the principle of optical detector.
 - 2) Explain the structure of surface emitting LED.
 - 3) Explain in detail the transmitter design and its requirements.
- b) The radiative and non-radiative recombination life times of minority carriers in the active region of a double heterojunction LED are 60 ns and 100 ns respectively. Determine the total carrier recombination life time and the power internally generated within the device when the peak emission wavelength is $0.9\mu\text{m}$ at a device current of 40 mA. **8**

T.E. (E & TC) (Part – II) Examination, 2016
OPTICAL COMMUNICATION

Day and Date : Thursday, 24-11-2016
 Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 100

- Instructions :**
- **All questions are compulsory.**
 - **Assume** suitable data if required.
 - **Figures to right indicates full marks..**
 - **Q. No. 1 is compulsory.** It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- The Vapor Axial Deposition (VAD) process is
 - A batch process
 - A continuous process
 - Outside layer deposition process
 - Inside layer deposition process
- Star couplers are generally used for distributing a
 - Single input signal to multiple outputs
 - Multiple input signals to single output
 - Multiple input signal to multiple outputs
 - None of these
- LASER is a _____ type of source.
 - Coherent
 - Non-coherent
 - Spontaneous
 - None of these
- A GaAs injection LASER has a total efficiency of 18%. If the voltage applied to the device is 2.5 V and the bandgap energy of GaAs is 1.43 eV, the external power efficiency of the device is
 - 10%
 - 31.47%
 - 3.18%
 - 9.71%
- Which of the following is best single-frequency injection LASER ?
 - Index guided LASER
 - Gain guided LASER
 - Double hetero junction LASER
 - Distributed feedback LASER
- At 1.3 μm wavelength, the edge emitting LED device exhibits _____ temperature dependence than the surface emitter.
 - Less
 - Moderate
 - Greater
 - No
- A photodiode has a quantum efficiency of 70% when photons of energy $1.8 \times 10^{-19} \text{ J}$ are incident upon it, then the responsivity of the photodiode is
 - 0.694
 - 0.723
 - 0.369
 - 0.623
- The carrier velocities of approximately 10^7 cm/s of a depletion layer width of 10 μm . The transit time is
 - 0.1 ns
 - 0.3 ns
 - 0.13 ns
 - 0.2 ns
- The optical power generated internally by LED is
 - $P_{\text{int}} = \eta_{\text{int}} \left(\frac{ci}{e\lambda} \right)$
 - $P_{\text{int}} = \eta_{\text{int}} \left(\frac{j}{e} \right) hf$
 - $P_{\text{int}} = \eta_{\text{int}} \left(\frac{ncj}{e} \right) hf$
 - $P_{\text{int}} = \eta_{\text{int}} \left(\frac{j}{e} \right)$

P.T.O.

- 10) The common method for time domain dispersion measurement is
A) Multimode optical fiber B) Single step index optical fiber
C) Single graded index optical fiber D) All plastic fiber
- 11) Which method is employed for interferometric measurement ?
A) Transmitted light interferometer B) Reflected light interferometer
C) Refracted light interferometer D) Both A) and B)
- 12) The LED can operate at _____ than the injection laser.
A) Higher current density B) Lower current density
C) Higher power D) None of these
- 13) The requirement of detector is
A) High fidelity B) Larger size
C) More numerical aperture D) All the above
- 14) The detail knowledge of the refractive index profile enables the
A) Impulse response of fiber B) Transient response
C) Both A) and B) D) None of above
- 15) The response of Avalanche photodiode is limited by
A) The transit time of the carrier across the absorption region
B) Diffusion time of carriers
C) Both A) and B)
D) None of above
- 16) The angles of incidence ϕ_1 and refraction ϕ_2 are related to each other and to the refractive indices of the dielectrics n_1 and n_2 and are given by Snell's law of refraction as
A) $n_1 \sin \phi_1 = n_2 \sin \phi_2$ B) $n_1 \cos \phi_1 = n_2 \cos \phi_2$
C) $n_1 \cos \phi_2 = n_2 \cos \phi_1$ D) $n_1 \sin \phi_2 = n_2 \sin \phi_1$
- 17) The numerical aperture is a measure of
A) The light scattering ability of the fiber B) Dispersion of the fiber
C) The light collecting ability of the fiber D) Attenuation of the fiber
- 18) Cutoff wavelength of an optical fiber is the wavelength
A) Above which the fiber becomes single moded
B) Below which the fiber becomes single moded
C) Above which no mode is supported
D) Below which no mode is supported
- 19) The mean optical power launched into an 8 km fiber is $120 \mu W$ and the mean optical power at the output is $3 \mu W$. The signal attenuation per km for the fiber is
A) 16 dB/km B) 8 dB/km C) 4 dB/km D) 2 dB/km
- 20) Macro bending losses can be avoided by
A) Operating at longest wavelengths possible
B) Designing the fibers with large relative refractive index differences
C) Designing the fibers with small relative refractive index differences
D) None of above
-

T.E. (E & TC) (Part – II) Examination, 2016
OPTICAL COMMUNICATION

Day and Date : Thursday, 24-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Marks : 80

- Instructions :**
- **All** questions are **compulsory**.
 - **Assume** suitable data if required.
 - Figures to **right** indicates **full** marks..

SECTION – I

2. A) Solve **any three** of the following : **(3×4=12)**

- 1) Explain the general block diagram of an optical communication system.
- 2) Explain phase velocity and group velocity.
- 3) Explain Rayleigh scattering loss in optical fiber.
- 4) Explain different types of fiber alignment losses.

B) A ruby laser contains a crystal of length 4 cm with a refractive index of 1.78. The peak emission wavelength from the device is $0.55\mu\text{m}$. Determine the number of longitudinal modes and their frequency separation.

8

3. A) Solve **any two** of the following : **(2×6=12)**

- 1) Explain double crucible method of fiber drawing. What are its advantages and drawbacks ?
- 2) Explain any two methods of mechanical splicing techniques used for splicing single optical fibers.
- 3) Explain injection laser characteristics.

B) Silica has an estimated fictive temperature of 1400°K with an isothermal compressibility of $7 \times 10^{-11} \text{ m}^2/\text{N}$. The refractive index and the photoelastic coefficient for silica are 1.46 and 0.286 respectively. Determine the theoretical attenuation in dB/Km due to fundamental Rayleigh scattering in silica at optical wavelength of $1\mu\text{m}$. Boltzmann's constant is $1.381 \times 10^{-21} \text{ J/}^\circ\text{K}$.

8

SECTION – II

4. a) Attempt **any three** questions : **(3×4=12)**
- 1) Explain the different advantages and disadvantages of LED as compare to laser.
 - 2) Explain the various parameters effecting the speed of response of detectors.
 - 3) Explain the total fiber attenuation measurement.
 - 4) The carrier velocity in a silicon p-i-n diode with $25\mu\text{m}$ depletion layer width is $3\times 10^4\text{ m/s}$. Determine the maximum response time for the device.
- b) Compare the electrical and optical bandwidths for an optical fiber communication system and develop a relationship between them. **8**
5. a) Attempt **any two** questions : **(2×6=12)**
- 1) Explain the principle of optical detector.
 - 2) Explain the structure of surface emitting LED.
 - 3) Explain in detail the transmitter design and its requirements.
- b) The radiative and non-radiative recombination life times of minority carriers in the active region of a double heterojunction LED are 60 ns and 100 ns respectively. Determine the total carrier recombination life time and the power internally generated within the device when the peak emission wavelength is $0.9\mu\text{m}$ at a device current of 40 mA. **8**

MOBILE COMMUNICATION

Day and Date : Friday, 25-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 100

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer : **(20×1=20)**

- 1) Which of the following channel is used for voice transmission from the MS to BS ?
a) RVC b) FVC c) FCC d) RCC
- 2) The technique adopted to increase the system capacity and reduce co-channel interference.
a) Sectorization b) Trunking c) GOS d) None of these
- 3) The design process of selecting and allocating channel group for all the base station within system is called as
a) Frequency reuse b) Handoff
c) Umbrella cell approach d) None of these
- 4) To reduce co-channel interference
a) Decrease the separation between the cell
b) Increase the separation between the cell
c) Increase the antenna height
d) None of these
- 5) The angle at which no. reflection occurs in the medium of origin ?
a) Brewster angle b) Doppler angle c) Perfect angle d) None of these
- 6) The model which reasonably accurate for predicting large scale signal strength over several kilometer is
a) Reflection b) Diffraction c) Two ray model d) None of above
- 7) RMS delay spread is related to
a) Time dispersion parameter b) Coherence bandwidth
c) Coherence time d) Doppler spread

P.T.O.

- 8) In TDMA/FDD the forward and reverse channel frequencies _____ while in TDMA/TDD _____
a) differ, same b) same, differ c) same, same d) differ, differ
- 9) _____ uses signals which have a transmission bandwidth that is several times greater than minimum required RF bandwidth.
a) TDMA b) SDMA c) FDMA d) SSMA
- 10) Receives a stronger signal by the receiver due to directional antenna gain and less interference is
a) SDMA b) TDMA c) SSMA d) Both a and b
- 11) Which of the following is based on CDMA ?
a) Soft Hand-off b) Hard hand-off c) Both a and b d) None of these
- 12) GSM stands for
a) Global Service for Mobile b) Global System for Mobile
c) Group of Special Machines d) Global Scope for Mobile
- 13) The _____ is the database at MSC that keeps the information about the identity of mobile phone equipment.
a) HLR b) VLR c) AuC d) EIR
- 14) In mobile station and base station downlink is also referred as
a) uplink b) forward link c) reverse link d) none
- 15) Which of the following are functions of MSC ?
a) Control BTS
b) To accept a call or a hand-off
c) To provide services to all mobile stations
d) All of the above
- 16) Types of handover is
a) Soft handover b) Hard handover
c) Both a and b d) None
- 17) Modulation techniques used in CDMA 2000 is
a) Uplink-QPSK downlink-BPSK b) Uplink-BPSK downlink-BPSK
c) Uplink-BPSK downlink-QPSK d) None
- 18) Standard GSM systems support a data rate of
a) 9.6 kbps b) 64 kbps c) 128 kbps d) 120 kbps
- 19) In paging framing channel, paging channel slot consists of
a) 8 half frames b) 6 half frames c) 10 half frames d) 18 half frames
- 20) The logical channels are called _____ channels in W-CDMA.
a) Transport b) Pilot c) Reverse pilot d) Global

Instructions : 1) *All questions are compulsory.*
2) *Assume suitable data if necessary.*

SECTION – I

2. Solve **any four** : **(4×4=16)**

- a) Explain the process of Handoff in cellular system.
- b) Describe SDMA technique for cellular system.
- c) Describe Fresnel zone geometry.
- d) How to improve coverage and capacity of a cellular system ?
- e) What is Rayleigh fading distribution ?

3. Solve **any three** : **(8×3=24)**

- a) Explain practical link budget design using path loss model in detail.
- b) Consider service area of a cellular system is 6300 km^2 , a total of 1001 radio channels are available for traffic handling and the area of one cell is 18 km^2 .
 - 1) Calculate replication factor for the cluster of size 7. Calculate number of channels per cell and system capacity.
 - 2) Calculate above parameter if the cluster size is decreased from 7 to 4 and comment on result obtained.
- c) Describe TDMA technique in detail and compare it with FDMA.
- d) Explain the following techniques.
 - 1) Flat fading
 - 2) Frequency selective fading
 - 3) Slow fading
 - 4) Fast fading.

Set P

SECTION – II

4. Attempt **any four** of the following : **(4×4=16)**
- a) What is Handoff ? Explain Handoff in GSM.
 - b) Explain with neat block diagram forward channels in W-CDMA.
 - c) Explain the various services and features provided by GSM.
 - d) Write a short note on GPRS.
 - e) Explain multiple access, duplexing techniques and modulation in GSM.
5. Attempt **any three** of the following : **(8×3=24)**
- a) Give the detail comparison for IS-95, IMT-2000 and WCDMA std's.
 - b) What are the different identifiers used in GSM, explain in detail.
 - c) Explain in detail forward IS 95-CDMA link structure.
 - d) Draw and explain GSM network architecture in detail.

2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) The model which reasonably accurate for predicting large scale signal strength over several kilometer is
a) Reflection b) Diffraction c) Two ray model d) None of above
- 2) RMS delay spread is related to
a) Time dispersion parameter b) Coherence bandwidth
c) Coherence time d) Doppler spread
- 3) In TDMA/FDD the forward and reverse channel frequencies _____ while in TDMA/TDD _____
a) differ, same b) same, differ c) same, same d) differ, differ
- 4) _____ uses signals which have a transmission bandwidth that is several times greater than minimum required RF bandwidth.
a) TDMA b) SDMA c) FDMA d) SSMA
- 5) Receives a stronger signal by the receiver due to directional antenna gain and less interference is
a) SDMA b) TDMA c) SSMA d) Both a and b
- 6) Which of the following is based on CDMA ?
a) Soft Hand-off b) Hard hand-off c) Both a and b d) None of these
- 7) GSM stands for
a) Global Service for Mobile b) Global System for Mobile
c) Group of Special Machines d) Global Scope for Mobile
- 8) The _____ is the database at MSC that keeps the information about the identity of mobile phone equipment.
a) HLR b) VLR c) AuC d) EIR

P.T.O.

- 9) In mobile station and base station downlink is also referred as
a) uplink b) forward link c) reverse link d) none
- 10) Which of the following are functions of MSC ?
a) Control BTS
b) To accept a call or a hand-off
c) To provide services to all mobile stations
d) All of the above
- 11) Types of handover is
a) Soft handover b) Hard handover
c) Both a and b d) None
- 12) Modulation techniques used in CDMA 2000 is
a) Uplink-QPSK downlink-BPSK b) Uplink-BPSK downlink-BPSK
c) Uplink-BPSK downlink-QPSK d) None
- 13) Standard GSM systems support a data rate of
a) 9.6 kbps b) 64 kbps c) 128 kbps d) 120 kbps
- 14) In paging framing channel, paging channel slot consists of
a) 8 half frames b) 6 half frames c) 10 half frames d) 18 half frames
- 15) The logical channels are called _____ channels in W-CDMA.
a) Transport b) Pilot c) Reverse pilot d) Global
- 16) Which of the following channel is used for voice transmission from the MS to BS ?
a) RVC b) FVC c) FCC d) RCC
- 17) The technique adopted to increase the system capacity and reduce co-channel interference.
a) Sectorization b) Trunking c) GOS d) None of these
- 18) The design process of selecting and allocating channel group for all the base station within system is called as
a) Frequency reuse b) Handoff
c) Umbrella cell approach d) None of these
- 19) To reduce co-channel interference
a) Decrease the separation between the cell
b) Increase the separation between the cell
c) Increase the antenna height
d) None of these
- 20) The angle at which no. reflection occurs in the medium of origin ?
a) Brewster angle b) Doppler angle c) Perfect angle d) None of these

**T.E. (Electronics and Telecommunication) (Part – II) Examination, 2016
MOBILE COMMUNICATION**

Day and Date : Friday, 25-11-2016

Marks : 80

Time : 10.00 a.m. to 1.00 p.m.

Instructions : 1) *All questions are compulsory.*
2) *Assume suitable data if necessary.*

SECTION – I

2. Solve **any four** : **(4×4=16)**

- a) Explain the process of Handoff in cellular system.
- b) Describe SDMA technique for cellular system.
- c) Describe Fresnel zone geometry.
- d) How to improve coverage and capacity of a cellular system ?
- e) What is Rayleigh fading distribution ?

3. Solve **any three** : **(8×3=24)**

- a) Explain practical link budget design using path loss model in detail.
- b) Consider service area of a cellular system is 6300 km^2 , a total of 1001 radio channels are available for traffic handling and the area of one cell is 18 km^2 .
 - 1) Calculate replication factor for the cluster of size 7. Calculate number of channels per cell and system capacity.
 - 2) Calculate above parameter if the cluster size is decreased from 7 to 4 and comment on result obtained.
- c) Describe TDMA technique in detail and compare it with FDMA.
- d) Explain the following techniques.
 - 1) Flat fading
 - 2) Frequency selective fading
 - 3) Slow fading
 - 4) Fast fading.

Set S

SECTION – II

4. Attempt **any four** of the following : **(4×4=16)**
- a) What is Handoff ? Explain Handoff in GSM.
 - b) Explain with neat block diagram forward channels in W-CDMA.
 - c) Explain the various services and features provided by GSM.
 - d) Write a short note on GPRS.
 - e) Explain multiple access, duplexing techniques and modulation in GSM.
5. Attempt **any three** of the following : **(8×3=24)**
- a) Give the detail comparasion for IS-95, IMT-2000 and WCDMA std's.
 - b) What are the different identifiers used in GSM, explain in detail.
 - c) Explain in detail forward IS 95-CDMA link structure.
 - d) Draw and explain GSM network architecture in detail.

COMPUTER ORGANIZATION

Day and Date : Saturday, 26-11-2016
Time : 10.00 a.m. to 12.00 noon

Total Marks : 50

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Marks : 10

SECTION – I

1. Choose the correct answer : **(10×1=10)**

- 1) A group of four bits is known as
 - a) nibble
 - b) byte
 - c) bit
 - d) all of above
- 2) _____ is used to store the data and program.
 - a) Memory unit
 - b) Input unit
 - c) Output unit
 - d) None of the above
- 3) ROM stands for
 - a) Read Only Memory
 - b) Random Only Memory
 - c) Read Online Memory
 - d) None of the above
- 4) In _____ representation, numbers are represented by mantissa comprising the significant digits and an exponent part of radix.
 - a) Floating point
 - b) Fixed point
 - c) Decimal number
 - d) None of the above
- 5) LRU stands for
 - a) Least Recently Used
 - b) Last Recently Used
 - c) Last Randomly Used
 - d) None of the above

P.T.O.

SECTION – II

- 6) _____ are the different types of generating control signals.
- a) Microprogrammed
 - b) Hardwired
 - c) Microinstruction
 - d) Both a and b
- 7) Hardwired control generator consists of
- a) Decoder/Encoder
 - b) Condition codes
 - c) Control/step counter
 - d) All of the above
- 8) In microprogrammed approach, signals are generated by
- a) machine instructions
 - b) system programs
 - c) utility tools
 - d) none of the above
- 9) After the compilation of DMA transfer processor is notified by
- a) Acknowledge signal
 - b) Interrupt signal
 - c) WMFC signal
 - d) None of the above
- 10) DMA controller has _____ registers.
- a) 1
 - b) 2
 - c) 3
 - d) 4

2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Marks : 10

1. Choose the correct answer : **(10×1=10)**

- 1) What is operating system ?
 - a) Collection of programs that manages hardware resources
 - b) System service provider to the application programs
 - c) Link to interface the hardware and application programs
 - d) All of the mentioned
- 2) Which one of the following is NOT true ?
 - a) kernel is the program that constitutes the central core of the operating system
 - b) kernel is the first part of operating system to load into memory during booting
 - c) kernel is made of various modules which can not be loaded in running operating system
 - d) kernel remains in the memory during the entire computer session
- 3) In operating system, each process has its own
 - a) address space and global variables
 - b) open files
 - c) pending alarms, signals and signal handlers
 - d) all of the mentioned

P.T.O.

- 4) In Unix, which system call creates the new process ?
- a) fork
 - b) create
 - c) new
 - d) none of the mentioned
- 5) Which module gives control of the CPU to the process selected by the short-term scheduler ?
- a) dispatcher
 - b) interrupt
 - c) scheduler
 - d) none of the mentioned
- 6) The interval from the time of submission of a process to the time of completion is termed as
- a) waiting time
 - b) turnaround time
 - c) response time
 - d) throughput
- 7) A process is selected from the _____ queue by the _____ scheduler, to be executed.
- a) blocked, short term
 - b) wait, long term
 - c) ready, short term
 - d) ready, long term
- 8) Round robin scheduling falls under the category of
- a) Non preemptive scheduling
 - b) Preemptive scheduling
 - c) None of these
 - d) All of the above
- 9) Which of the following condition is required for deadlock to be possible ?
- a) mutual exclusion
 - b) a process may hold allocated resources while awaiting assignment of other resources
 - c) no resource can be forcibly removed from a process holding it
 - d) all of the mentioned
- 10) Which one of the following is the address generated by CPU ?
- a) physical address
 - b) absolute address
 - c) logical address
 - d) none of the mentioned

**T.E. (Part – II) (Electronics and Telecommunication Engineering)
Examination, 2016
(Self Learning)
OPERATING SYSTEM**

Day and Date : Saturday, 26-11-2016
Time : 10.00 a.m. to 1.00 p.m.

Max. Marks : 50

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in Answer Book Page No. 3. Each question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Marks : 10

1. Choose the correct answer :

(10×1=10)

- 1) In operating system, each process has its own
 - a) address space and global variables
 - b) open files
 - c) pending alarms, signals and signal handlers
 - d) all of the mentioned
- 2) In Unix, which system call creates the new process ?
 - a) fork
 - b) create
 - c) new
 - d) none of the mentioned
- 3) Which module gives control of the CPU to the process selected by the short-term scheduler ?
 - a) dispatcher
 - b) interrupt
 - c) scheduler
 - d) none of the mentioned
- 4) The interval from the time of submission of a process to the time of completion is termed as
 - a) waiting time
 - b) turnaround time
 - c) response time
 - d) throughput

P.T.O.

- 5) A process is selected from the _____ queue by the _____ scheduler, to be executed.
- a) blocked, short term
 - b) wait, long term
 - c) ready, short term
 - d) ready, long term
- 6) Round robin scheduling falls under the category of
- a) Non preemptive scheduling
 - b) Preemptive scheduling
 - c) None of these
 - d) All of the above
- 7) Which of the following condition is required for deadlock to be possible ?
- a) mutual exclusion
 - b) a process may hold allocated resources while awaiting assignment of other resources
 - c) no resource can be forcibly removed from a process holding it
 - d) all of the mentioned
- 8) Which one of the following is the address generated by CPU ?
- a) physical address
 - b) absolute address
 - c) logical address
 - d) none of the mentioned
- 9) What is operating system ?
- a) Collection of programs that manages hardware resources
 - b) System service provider to the application programs
 - c) Link to interface the hardware and application programs
 - d) All of the mentioned
- 10) Which one of the following is NOT true ?
- a) kernel is the program that constitutes the central core of the operating system
 - b) kernel is the first part of operating system to load into memory during booting
 - c) kernel is made of various modules which can not be loaded in running operating system
 - d) kernel remains in the memory during the entire computer session

MCQ/Objective Type Questions

Marks : 10

1. Choose the correct answer : **10**

- 1) A mobile robot
 - a) acts as a transportation system, like a “mail mobile”
 - b) imitates some human senses
 - c) performs manufacturing tasks like painting cars
 - d) is another name for virtual reality
- 2) What is the name for the space inside which a robot unit operates ?
 - a) environment
 - b) spatial base
 - c) danger zone
 - d) work envelop
- 3) The number of moveable joints in the base, the arm and the end effectors of the robot determines
 - a) degrees of freedom
 - b) payload capacity
 - c) operational limits
 - d) flexibility
- 4) Which of the following terms is not one of the four basic parts of a robot ?
 - a) peripheral tools
 - b) sensor
 - c) controller
 - d) drive
- 5) Which of the following is a sensor that measures the movement of an object ?
 - a) Pressure sensor
 - b) Motion sensor
 - c) Action sensor
 - d) Touch sensor

P.T.O.

- 6) Which of the following is a device that receives information from an input device and changes the output if required ?
- a) Microprocessor
 - b) Actuator
 - c) Sensing device
 - d) Controller
- 7) Which of the following is an automated machine that works on an assembly line ?
- a) Industrial robot
 - b) Assembly robot
 - c) Domestic robot
 - d) Android
- 8) A robot is a
- a) computer-controlled machine that mimics the motor activities of living things
 - b) machine that thinks like a human
 - c) machine that replaces a human by performing complex mental processing tasks
 - d) type of virtual reality device that takes the place of human in adventures
- 9) Which of the basic parts of a robot unit would include the computer circuitry that could be programmed to determine what the robot would do ?
- a) sensor
 - b) controller
 - c) arm
 - d) drive
- 10) Computer-controlled machines that mimic the motor activities of living things are
- a) Virtual reality
 - b) Robotics
 - c) Knowledge-based systems
 - d) Machines that think like a human

Examination, 2016
INDUSTRIAL ELECTRONICS (Old)

Day and Date : Saturday, 10-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Total Marks : 100

- Instructions :** 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
3) Figures to the **right** indicate **full** marks.
4) Assume data, **if** necessary.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) The SCR is turned-off when the anode current falls below
 - A) Forward current rating
 - B) Breakover voltage
 - C) Holding current
 - D) Latching current
- 2) The object of connecting resistance and capacitance across gate circuit is to protect the thyristor gate against
 - A) Overvoltage
 - B) dv/dt
 - C) Noise signals
 - D) None of these
- 3) An UJT exhibits negative resistance region
 - A) Before the break point
 - B) Between peak and valley point
 - C) After the valley point
 - D) Both (A) and (C)
- 4) The MOSFET combines the areas of _____ and _____
 - A) Field effect and MOS technology
 - B) Semiconductor and TTL
 - C) MOS technology and CMOS technology
 - D) None of the mentioned
- 5) The SCR is a _____ switch.
 - A) Two-directional
 - B) Uni-directional
 - C) Three-directional
 - D) Four-directional
- 6) Thyristor equivalent of thyatron tube is
 - A) SCR
 - B) UJT
 - C) Diac
 - D) Triac
- 7) Cycloconverter converts
 - A) AC voltage to DC voltage
 - B) DC voltage to AC voltage
 - C) AC voltage to AC voltage at same frequency
 - D) AC voltage at supply frequency to AC voltage at load frequency
- 8) A single phase full bridge inverter can operate in load commutation mode in case load consists of
 - A) RLC overdamped
 - B) RLC underdamped
 - C) RLC critically damped
 - D) None of these
- 9) The ratio of latching current to holding current SCR is
 - A) 0.5
 - B) 1.0
 - C) 1.5
 - D) 2.5

P.T.O.

- 10) The single pulse modulation of PWM inverter, third harmonics can be eliminated if pulse width is equal to
A) 30° B) 60° C) 120° D) None of these
- 11) TRIAC cannot be used in
A) AC voltage regulator B) Cycloconverter
C) Solid state type of switch D) Inverter
- 12) For continuous conduction, in a single phase full converter each pair of SCRs conducts for
A) $(\pi - \alpha)$ radians B) π radians
C) α radians D) $(\pi + \alpha)$ radians
- 13) In a single phase full converter, if output voltage has peak and average values of 325 V and 133 V respectively, then the firing angle is
A) 40° B) 50° C) 70° D) 130°
- 14) Chopper control for DC motor provides variation in
A) Input voltage B) Frequency
C) Both A) and B) D) None of the above
- 15) Which one of the following is the most suitable device for dc-to-dc converter ?
A) BJT B) GTO C) MOSFET D) Thyristor
- 16) In chopper, the waveforms for input and output voltages are respectively
A) discontinuous, continuous B) continuous, discontinuous
C) both continuous D) both discontinuous
- 17) A step up chopper has V_s as the source voltage and ' α ' as the duty cycle. The output voltage for this chopper is given by
A) $V_s \cdot (1 + \alpha)$ B) $\frac{V_s}{(1 + \alpha)}$ C) $V_s \cdot (1 - \alpha)$ D) $\frac{V_s}{(1 - \alpha)}$
- 18) Choose the correct statement.
A) MOSFET is a uncontrolled device
B) MOSFET is a voltage controlled device
C) MOSFET is a current controlled device
D) MOSFET is a temperature controlled device
- 19) The cycloconverter requires natural or forced commutation as under
A) Natural commutation in both step-up and step down cycloconverter
B) Forced commutation in both step-up and step down cycloconverter
C) Forced commutation in step-up cycloconverter
D) Forced commutation in step-down cycloconverter
- 20) Induction heating is used for
A) Insulating materials
B) Magnetic materials
C) Conducting materials
D) Both magnetic and non-magnetic materials
-

T.E. (Electronics and Telecommunication Engineering) (Part – II)
Examination, 2016
INDUSTRIAL ELECTRONICS (Old)

Day and Date : Saturday, 10-12-2016

Marks : 80

Time : 10.00 a.m. to 1.00 p.m

- Instructions :** 1) Figures to the **right** indicate **full** marks.
2) *Assume data, if necessary.*
3) **All questions are compulsory.**

SECTION – I

2. Attempt **any four** of the following (4×6=24)
- a) Explain turn ON and turn OFF mechanism of SCR.
 - b) Explain how to protect the SCR under abnormal conditions over current, over voltage, thermal and dv/dt.
 - c) Derive expression Fourier series for line current, input power factor of single-phase bridge converter.
 - d) Explain construction, operation and characteristics of GTO.
 - e) How many structures are there for power MOSFETs and describe any one of them with their advantages and disadvantages ?
 - f) Compare single phase half controlled and fully controlled converter.
3. Attempt **any two** of the following : (2×8=16)
- a) Explain AC power control using TRIAC
 - i) Fan regulator
 - ii) Lamp dimmer
 - b) Classify and explain different types of commutation techniques for converter circuits.
 - c) Explain three phase half wave converter with resistive load and derive expression for average output voltage.

SECTION – II

4. Attempt **any four** of the following : (4×6=24)
- a) What is cycloconverter ? Explain the operation of 1- ϕ to – 1- ϕ AC cycloconverter.
 - b) Discuss about single phase separately excited DC motor drive with neat sketch.
 - c) Explain the operation of single phase half bridge inverter for RL loads with the help of neat circuit diagram and necessary waveforms.

Set P

- d) Discuss the working of a single phase parallel inverter and its commutation process with neat circuit diagram and necessary waveforms.
- e) Discuss the working of a Morgan's chopper circuit.
- f) Describe the principle of step-up chopper. Derive an expression for the average output voltage in terms of input dc voltage and duty cycle.

5. Attempt **any two** of the following :

(2×8=16)

- a) Write notes :
 - i) HVDC transmission
 - iii) Static circuit breakers.
 - b) Explain the operation of 3- ϕ bridge inverter for 180 degree mode of operation with aid of relevant phase and line voltage waveforms.
 - c) Classify and explain control techniques of dc to dc converters.

 - C) Holding current
 - D) Latching current
- 7) The object of connecting resistance and capacitance across gate circuit is to protect the thyristor gate against
 - A) Overvoltage
 - B) dv/dt
 - C) Noise signals
 - D) None of these

P.T.O.

- 8) An UJT exhibits negative resistance region
A) Before the break point
B) Between peak and valley point
C) After the valley point
D) Both (A) and (C)
- 9) The MOSFET combines the areas of _____ and _____
A) Field effect and MOS technology
B) Semiconductor and TTL
C) MOS technology and CMOS technology
D) None of the mentioned
- 10) The SCR is a _____ switch.
A) Two-directional
B) Uni-directional
C) Three-directional
D) Four-directional
- 11) Thyristor equivalent of thyatron tube is
A) SCR
B) UJT
C) Diac
D) Triac
- 12) Cycloconverter converts
A) AC voltage to DC voltage
B) DC voltage to AC voltage
C) AC voltage to AC voltage at same frequency
D) AC voltage at supply frequency to AC voltage at load frequency
- 13) A single phase full bridge inverter can operate in load commutation mode in case load consists of
A) RLC overdamped
B) RLC underdamped
C) RLC critically damped
D) None of these
- 14) The ratio of latching current to holding current SCR is
A) 0.5
B) 1.0
C) 1.5
D) 2.5
- 15) The single pulse modulation of PWM inverter, third harmonics can be eliminated if pulse width is equal to
A) 30°
B) 60°
C) 120°
D) None of these
- 16) TRIAC cannot be used in
A) AC voltage regulator
B) Cycloconverter
C) Solid state type of switch
D) Inverter
- 17) For continuous conduction, in a single phase full converter each pair of SCRs conducts for
A) $(\pi - \alpha)$ radians
B) π radians
C) α radians
D) $(\pi + \alpha)$ radians
- 18) In a single phase full converter, if output voltage has peak and average values of 325 V and 133 V respectively, then the firing angle is
A) 40°
B) 50°
C) 70°
D) 130°
- 19) Chopper control for DC motor provides variation in
A) Input voltage
B) Frequency
C) Both A) and B)
D) None of the above
- 20) Which one of the following is the most suitable device for dc-to-dc converter ?
A) BJT
B) GTO
C) MOSFET
D) Thyristor

T.E. (Electronics and Telecommunication Engineering) (Part – II)
Examination, 2016
INDUSTRIAL ELECTRONICS (Old)

Day and Date : Saturday, 10-12-2016

Marks : 80

Time : 10.00 a.m. to 1.00 p.m

- Instructions :** 1) Figures to the **right** indicate **full** marks.
2) *Assume data, if necessary.*
3) **All questions are compulsory.**

SECTION – I

2. Attempt **any four** of the following (4×6=24)
- a) Explain turn ON and turn OFF mechanism of SCR.
 - b) Explain how to protect the SCR under abnormal conditions over current, over voltage, thermal and dv/dt.
 - c) Derive expression Fourier series for line current, input power factor of single-phase bridge converter.
 - d) Explain construction, operation and characteristics of GTO.
 - e) How many structures are there for power MOSFETs and describe any one of them with their advantages and disadvantages ?
 - f) Compare single phase half controlled and fully controlled converter.
3. Attempt **any two** of the following : (2×8=16)
- a) Explain AC power control using TRIAC
 - i) Fan regulator
 - ii) Lamp dimmer
 - b) Classify and explain different types of commutation techniques for converter circuits.
 - c) Explain three phase half wave converter with resistive load and derive expression for average output voltage.

SECTION – II

4. Attempt **any four** of the following : (4×6=24)
- a) What is cycloconverter ? Explain the operation of 1- ϕ to – 1- ϕ AC cycloconverter.
 - b) Discuss about single phase separately excited DC motor drive with neat sketch.
 - c) Explain the operation of single phase half bridge inverter for RL loads with the help of neat circuit diagram and necessary waveforms.

Set Q

- d) Discuss the working of a single phase parallel inverter and its commutation process with neat circuit diagram and necessary waveforms.
- e) Discuss the working of a Morgan's chopper circuit.
- f) Describe the principle of step-up chopper. Derive an expression for the average output voltage in terms of input dc voltage and duty cycle.

5. Attempt **any two** of the following :

(2×8=16)

- a) Write notes :
 - i) HVDC transmission
 - iii) Static circuit breakers.
 - b) Explain the operation of 3- ϕ bridge inverter for 180 degree mode of operation with aid of relevant phase and line voltage waveforms.
 - c) Classify and explain control techniques of dc to dc converters.

T.E. (Electronics and Telecommunication Engineering) (Part – II)
Examination, 2016
INDUSTRIAL ELECTRONICS (Old)

Day and Date : Saturday, 10-12-2016
Time : 10.00 a.m. to 1.00 p.m.

Total Marks : 100

- Instructions :** 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
3) Figures to the **right** indicate **full** marks.
4) Assume data, **if** necessary.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) TRIAC cannot be used in
 - A) AC voltage regulator
 - B) Cycloconverter
 - C) Solid state type of switch
 - D) Inverter
- 2) For continuous conduction, in a single phase full converter each pair of SCRs conducts for
 - A) $(\pi - \alpha)$ radians
 - B) π radians
 - C) α radians
 - D) $(\pi + \alpha)$ radians
- 3) In a single phase full converter, if output voltage has peak and average values of 325 V and 133 V respectively, then the firing angle is
 - A) 40°
 - B) 50°
 - C) 70°
 - D) 130°
- 4) Chopper control for DC motor provides variation in
 - A) Input voltage
 - B) Frequency
 - C) Both A) and B)
 - D) None of the above
- 5) Which one of the following is the most suitable device for dc-to-dc converter ?
 - A) BJT
 - B) GTO
 - C) MOSFET
 - D) Thyristor
- 6) In chopper, the waveforms for input and output voltages are respectively
 - A) discontinuous, continuous
 - B) continuous, discontinuous
 - C) both continuous
 - D) both discontinuous
- 7) A step up chopper has V_s as the source voltage and ' α ' as the duty cycle. The output voltage for this chopper is given by
 - A) $V_s \cdot (1 + \alpha)$
 - B) $V_s / (1 + \alpha)$
 - C) $V_s \cdot (1 - \alpha)$
 - D) $V_s / (1 - \alpha)$
- 8) Choose the correct statement.
 - A) MOSFET is a uncontrolled device
 - B) MOSFET is a voltage controlled device
 - C) MOSFET is a current controlled device
 - D) MOSFET is a temperature controlled device

P.T.O.

- 9) The cycloconverter require natural or forced commutation as under
A) Natural commutation in both step-up and step down cycloconverter
B) Forced commutation in both step-up and step down cycloconverter
C) Forced commutation in step-up cycloconverter
D) Forced commutation in step-down cycloconverter
- 10) Induction heating is used for
A) Insulating materials
B) Magnetic materials
C) Conducting materials
D) Both magnetic and non-magnetic materials
- 11) The SCR is turned-off when the anode current falls below
A) Forward current rating
B) Breakover voltage
C) Holding current
D) Latching current
- 12) The object of connecting resistance and capacitance across gate circuit is to protect the thyristor gate against
A) Overvoltage
B) dv/dt
C) Noise signals
D) None of these
- 13) An UJT exhibits negative resistance region
A) Before the break point
B) Between peak and valley point
C) After the valley point
D) Both (A) and (C)
- 14) The MOSFET combines the areas of _____ and _____
A) Field effect and MOS technology
B) Semiconductor and TTL
C) MOS technology and CMOS technology
D) None of the mentioned
- 15) The SCR is a _____ switch.
A) Two-directional
B) Uni-directional
C) Three-directional
D) Four-directional
- 16) Thyristor equivalent of thyatron tube is
A) SCR
B) UJT
C) Diac
D) Triac
- 17) Cycloconverter converts
A) AC voltage to DC voltage
B) DC voltage to AC voltage
C) AC voltage to AC voltage at same frequency
D) AC voltage at supply frequency to AC voltage at load frequency
- 18) A single phase full bridge inverter can operate in load commutation mode in case load consists of
A) RLC overdamped
B) RLC underdamped
C) RLC critically damped
D) None of these
- 19) The ratio of latching current to holding current SCR is
A) 0.5
B) 1.0
C) 1.5
D) 2.5
- 20) The single pulse modulation of PWM inverter, third harmonics can be eliminated of pulse width is equal to
A) 30°
B) 60°
C) 120°
D) None of these

Time : 3.00 p.m. to 6.00 p.m.

Instructions : 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.

2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

- 1) When documenting a client's wide area network, you discover that every physical location has a dedicated link to every other physical location. Which of the following wiring topologies does this describe ?
a) Bus b) Star c) Ring d) Mesh
- 2) In the OSI model, which of the following is an application layer services ?
a) Network virtual terminal
b) File transfer, access and management
c) Mail service
d) All of above
- 3) Which of the following OSI layers handles the function process to process communication ?
a) Session b) Application c) Transport d) Presentation
- 4) Number of links to connect n nodes in a mesh topology is =
a) $N(N - 1)/2$ b) $N(N - 2)$ c) N d) N^2
- 5) The remainder of CRC division at receiver is zero, means
a) Transmission Error occur b) No transmission Error
c) Retransmission d) None of the above
- 6) _____ Frame does not carry any sequence number in HDLC.
a) I-Frame b) S-Frame c) U-Frame d) None of the above
- 7) In CRS _____ arithmetic is used to carry out the division.
a) Module 1 b) Module 2 c) Module 3 d) Module 4
- 8) IEEE 802.3 uses _____ cable.
a) 10Base5 b) 10Base2 c) 10baseT d) All above

P.T.O.

- 9) Which of the following is a valid subnet mask value ?
a) 255.0.255.255 b) 0.0.0.255
c) 255.255.254.0 d) 255.255.255.256
- 10) UDP is called a _____ transport protocol.
a) Connectionless, reliable b) Connectionless, unreliable
c) Connection-oriented, Unreliable d) None of these
- 11) Errors in the header or option fields of an IP datagram requires a _____ error message.
a) Parameter problem b) Source-Quench
c) Router-Solicitation d) None of these
- 12) In case of Token Ring networks, one bit delay is associated with _____ mode of operation.
a) Listen mode b) Bypass mode c) Transmit d) None of these
- 13) IP multicast uses
a) Class A address b) Class B address
c) Class C address d) Class D address
- 14) Which of the following standards used for CSMA/CD LAN ?
a) IEEE 802.3 b) IEEE 802.2 c) IEEE 802.5 d) IEEE 802.4
- 15) Problem of mapping IP address to physical address is solved by
a) ARP b) RARP c) DHCP d) ICMP
- 16) For early lease termination, DHCP client sends _____ message to the server.
a) DHCPNACK b) DHCPACK
c) DHCPRELEASE d) None of these
- 17) For distribution of link state packets, which of the following method is used ?
a) Shortest Path b) Flow based
c) Flooding d) Distance Vector Routing
- 18) DNS uses caching for
a) Search mapping b) Name Resolution
c) Optimizing search cost d) None of these
- 19) You are given a Class C network with 26 bits for networking. How many subnets do you have ?
a) 1 b) 2 c) 3 d) 4
- 20) You are given a Class C network with a subnet mask of 255.255.255.192 how many host addresses are there on each subnet ?
a) 30 b) 64 c) 126 d) 254

B.E. (Electronics and Telecommunication Engineering) (Part – I)
Examination, 2016
COMPUTER COMMUNICATION NETWORK

Day and Date : Tuesday, 29-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

SECTION – I

2. Attempt **any four** : **(4×5=20)**
- a) Explain in detail any two network Topologies with their advantages and disadvantages.
 - b) Explain character stuffing method of framing.
 - c) Draw and explain the function of each layer in TCP/IP Model.
 - d) Explain hamming code method of error detection.
 - e) Explain the pure ALOHA and slotted ALOHA protocol.
3. Attempt **any two** : **(2×10=20)**
- a) Draw TCP segment format. Explain various fields in it. Explain how TCP establishes connection by three way handshaking.
 - b) Explain IP addressing with Classes and their ranges.
 - c) Explain alongwith suitable example CRC method of error detection.

SECTION – II

4. Attempt **any four** : **(4×5=20)**
- a) Write a short note on ARP.
 - b) Explain various modes of operations in case of IEEE 802.5 Token Ring Network.

Set P

- c) What is the relation between switch and bridge ?
- d) What are the various Telnet options ? Explain option negotiation.
- e) Discuss in detail process steps of SMTP.

5. Attempt **any two** :

(2×10=20)

- a) Explain IEEE 802.3 Physical layer specifications.
 - b) Explain shortest path routing.
 - c) Draw and explain block schematic of Modem.
-

Set **Q**

Day and Date : Tuesday, 29-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Total Marks : 100

**2) Answer MCQ/Objective type questions on Page No. 3 only.
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

Duration : 30 Minutes

Marks : 20

- 1) For early lease termination, DHCP client sends _____ message to the server.
 - a) DHCPNACK
 - b) DHCPACK
 - c) DHCPRELEASE
 - d) None of these
- 2) For distribution of link state packets, which of the following method is used ?
 - a) Shortest Path
 - b) Flow based
 - c) Flooding
 - d) Distance Vector Routing
- 3) DNS uses caching for
 - a) Search mapping
 - b) Name Resolution
 - c) Optimizing search cost
 - d) None of these
- 4) You are given a Class C network with 26 bits for networking. How many subnets do you have ?
 - a) 1
 - b) 2
 - c) 3
 - d) 4
- 5) You are given a Class C network with a subnet mask of 255.255.255.192 how many host addresses are there on each subnet ?
 - a) 30
 - b) 64
 - c) 126
 - d) 254
- 6) When documenting a client's wide area network, you discover that every physical location has a dedicated link to every other physical location. Which of the following wiring topologies does this describe ?
 - a) Bus
 - b) Star
 - c) Ring
 - d) Mesh

P.T.O.

- 7) In the OSI model, which of the following is an application layer services ?
a) Network virtual terminal
b) File transfer, access and management
c) Mail service
d) All of above

B.E. (Electronics and Telecommunication Engineering) (Part – I)
Examination, 2016
COMPUTER COMMUNICATION NETWORK

Day and Date : Tuesday, 29-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

SECTION – I

2. Attempt **any four** : **(4×5=20)**
- a) Explain in detail any two network Topologies with their advantages and disadvantages.
 - b) Explain character stuffing method of framing.
 - c) Draw and explain the function of each layer in TCP/IP Model.
 - d) Explain hamming code method of error detection.
 - e) Explain the pure ALOHA and slotted ALOHA protocol.
3. Attempt **any two** : **(2×10=20)**
- a) Draw TCP segment format. Explain various fields in it. Explain how TCP establishes connection by three way handshaking.
 - b) Explain IP addressing with Classes and their ranges.
 - c) Explain alongwith suitable example CRC method of error detection.

SECTION – II

4. Attempt **any four** : **(4×5=20)**
- a) Write a short note on ARP.
 - b) Explain various modes of operations in case of IEEE 802.5 Token Ring Network.

Set Q

- c) What is the relation between switch and bridge ?
- d) What are the various Telnet options ? Explain option negotiation.
- e) Discuss in detail process steps of SMTP.

5. Attempt **any two** :

(2×10=20)

- a) Explain IEEE 802.3 Physical layer specifications.
 - b) Explain shortest path routing.
 - c) Draw and explain block schematic of Modem.
-

B.E. (Electronics and Telecommunication Engineering) (Part – I)
Examination, 2016
COMPUTER COMMUNICATION NETWORK

Day and Date : Tuesday, 29-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Total Marks : 100

Instructions : 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

- 1) Errors in the header or option fields of an IP datagram requires a _____ error message.
 - a) Parameter problem
 - b) Source-Quench
 - c) Router-Solicitation
 - d) None of these
- 2) In case of Token Ring networks, one bit delay is associated with _____ mode of operation.
 - a) Listen mode
 - b) Bypass mode
 - c) Transmit
 - d) None of these
- 3) IP multicast uses
 - a) Class A address
 - b) Class B address
 - c) Class C address
 - d) Class D address
- 4) Which of the following standards used for CSMA/CD LAN ?
 - a) IEEE 802.3
 - b) IEEE 802.2
 - c) IEEE 802.5
 - d) IEEE 802.4
- 5) Problem of mapping IP address to physical address is solved by
 - a) ARP
 - b) RARP
 - c) DHCP
 - d) ICMP
- 6) For early lease termination, DHCP client sends _____ message to the server.
 - a) DHCPNACK
 - b) DHCPACK
 - c) DHCPRELEASE
 - d) None of these
- 7) For distribution of link state packets, which of the following method is used ?
 - a) Shortest Path
 - b) Flow based
 - c) Flooding
 - d) Distance Vector Routing

P.T.O.

- 8) DNS uses caching for
 - a) Search mapping
 - b) Name Resolution
 - c) Optimizing search cost
 - d) None of these
- 9) You are given a Class C network with 26 bits for networking. How many subnets do you have ?
 - a) 1
 - b) 2
 - c) 3
 - d) 4
- 10) You are given a Class C network with a subnet mask of 255.255.255.192 how many host addresses are there on each subnet ?
 - a) 30
 - b) 64
 - c) 126
 - d) 254
- 11) When documenting a client's wide area network, you discover that every physical location has a dedicated link to every other physical location. Which of the following wiring topologies does this describe ?
 - a) Bus
 - b) Star
 - c) Ring
 - d) Mesh
- 12) In the OSI model, which of the following is an application layer services ?
 - a) Network virtual terminal
 - b) File transfer, access and management
 - c) Mail service
 - d) All of above
- 13) Which of the following OSI layers handles the function process to process communication ?
 - a) Session
 - b) Application
 - c) Transport
 - d) Presentation
- 14) Number of links to connect n nodes in a mesh topology is =
 - a) $N(N - 1)/2$
 - b) $N(N - 2)$
 - c) N
 - d) N^2
- 15) The remainder of CRC division at receiver is zero, means
 - a) Transmission Error occur
 - b) No transmission Error
 - c) Retransmission
 - d) None of the above
- 16) _____ Frame does not carry any sequence number in HDLC.
 - a) I-Frame
 - b) S-Frame
 - c) U-Frame
 - d) None of the above
- 17) In CRS _____ arithmetic is used to carry out the division.
 - a) Module 1
 - b) Module 2
 - c) Module 3
 - d) Module 4
- 18) IEEE 802.3 uses _____ cable.
 - a) 10Base5
 - b) 10Base2
 - c) 10baseT
 - d) All above
- 19) Which of the following is a valid subnet mask value ?
 - a) 255.0.255.255
 - b) 0.0.0.255
 - c) 255.255.254.0
 - d) 255.255.255.256
- 20) UDP is called a _____ transport protocol.
 - a) Connectionless, reliable
 - b) Connectionless, unreliable
 - c) Connection-oriented, Unreliable
 - d) None of these

Examination, 2016
COMPUTER COMMUNICATION NETWORK

Day and Date : Tuesday, 29-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

SECTION – I

2. Attempt **any four** : **(4×5=20)**
- a) Explain in detail any two network Topologies with their advantages and disadvantages.
 - b) Explain character stuffing method of framing.
 - c) Draw and explain the function of each layer in TCP/IP Model.
 - d) Explain hamming code method of error detection.
 - e) Explain the pure ALOHA and slotted ALOHA protocol.
3. Attempt **any two** : **(2×10=20)**
- a) Draw TCP segment format. Explain various fields in it. Explain how TCP establishes connection by three way handshaking.
 - b) Explain IP addressing with Classes and their ranges.
 - c) Explain alongwith suitable example CRC method of error detection.

SECTION – II

4. Attempt **any four** : **(4×5=20)**
- a) Write a short note on ARP.
 - b) Explain various modes of operations in case of IEEE 802.5 Token Ring Network.

Set S

- c) What is the relation between switch and bridge ?
- d) What are the various Telnet options ? Explain option negotiation.
- e) Discuss in detail process steps of SMTP.

5. Attempt **any two** :

(2×10=20)

- a) Explain IEEE 802.3 Physical layer specifications.
 - b) Explain shortest path routing.
 - c) Draw and explain block schematic of Modem.

B.E. (E & TC) (Part – I) Examination, 2016
VLSI DESIGN

Day and Date : Thursday, 1-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

- Instructions:** 1) **All questions are compulsory.**
2) Figures to the **right** indicate **maximum** marks.
3) **Assume** suitable data **if required.**
4) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
5) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer : (1×20=20)

- 1) Under steady state condition power dissipated in CMOS circuit is
a) 0 W b) 10 μ W c) 0.1 μ W d) None
- 2) The symbol _____ is the signal assignment operator.
a) := b) <=
c) => d) None of above
- 3) Transmission Gate in CMOS also called as
a) Pass Gate b) Pull – up gate
c) Fail Gate d) Pull – down gate
- 4) The block of code which defines the relationship between input, output and internal signal or variable in VHDL
a) Architecture b) Entity c) Package d) Library
- 5) To implement 5 input NOR gate using CMOS logic requires _____ numbers of MOSFETs.
a) 6 b) 8 c) 10 d) 4
- 6) _____ is not a concurrent statement.
a) Generate b) When else
c) If – then d) With – Select – when
- 7) The problem of a clock skew occurs in
a) Gates b) Sequential circuit
c) Combinational circuits d) None

P.T.O.

- 8) When an iterative array of identical components is required, the _____ statement provides an easy way of instantiating these components.
a) Port map b) For loop c) For Generate d) None
- 9) A process cannot have
a) Wait statement b) Wait statement and sensitivity list
c) Sensitivity list d) None
- 10) CLK'1 is an attribute type
a) EVENT b) Delay c) Stable d) None
- 11) The behaviour of sequential circuit is described in tabular format called
a) State table b) Truth table c) State diagram d) Both a) and b)
- 12) Built in self test contains
a) Shift register b) Linear feedback shift register
c) Compressor circuit d) Both b) and c)
- 13) Logic block of FPGA contains
a) Macrocell b) Look-up table
c) Both a) and b) d) None
- 14) Stuck-at 0 and stuck-at 1 faults causes due to
a) Short circuit fault b) Open circuit fault
c) Short and open circuit fault d) None
- 15) Logic within the functional block of CPLD is implemented using
a) Product-of-some b) Sum-of-product
c) Both a) and b) d) None
- 16) Macrocell of CPLD can implement _____ function.
a) Combinatorial b) Sequential/registered
c) Both a) and b) d) None
- 17) Boundary Scan technique consists of
a) Scan path testing port b) Test access port
c) Both a) and b) d) None
- 18) To detect N bit sequence using Moore machine, the number of states required
a) $2N$ b) $N + 1$ c) $N - 1$ d) $2N - 1$
- 19) A PLA has a
a) programmable AND b) programmable AND and OR
c) a) and b) both d) none of the above
- 20) The macrocell register can be configured as _____ flip flop.
a) D b) T c) D and T d) D or T
-

Seat No.

B.E. (E & TC) (Part – I) Examination, 2016
VLSI DESIGN

Day and Date : Thursday, 1-12-2016

Marks : 80

Time : 3.00 p.m. to 6.00 p.m.

- Instructions :** 1) **All questions are compulsory.**
2) **Figures to the right indicate maximum marks.**
3) **Assume suitable data if required.**

SECTION – I

2. Solve **any four** : **(4×4=16)**

- a) For CMOS inverter $C = 50 \text{ fF}$, $V = 3 \text{ V}$ and $F = 100 \text{ MHz}$ calculate dynamic power consumed.
- b) What is pullup and pull down network in CMOS ?
- c) What is Dataflow Modeling ?
- d) Explain the concept of libraries.
- e) Write VHDL code for 3 : 8 decoder.

3. Solve **any three** : **(8×3=24)**

- a) Implement the function using CMOS logic :
 - i) $y = \overline{a + (b + c)(d + e)}$
 - ii) $y = (ab + \overline{cd})e$.
- b) Explain Operator overloading with example.
- c) Explain in detail VHDL Subprogram.
- d) Write VHDL code for 16 : 1 multiplexer using structural modeling.

SECTION – II

4. Solve **any four** :**(4×4=16)**

a) Write a VHDL code given state diagram :

b) Design J-K flipflop using state diagram.

c) Write a short note on boundary scan.

d) Write a test bench for 1 bit comparator.

e) Compare CPLD and FPGA.

5. Solve **any three** :**(8×3=24)**

a) Explain in detail Macrocell.

b) Explain in detail architecture of FPGA.

c) Design state diagram and write VHDL code for coffee vending machine.

d) Write a VHDL code for 2×2 multiplier using Add and Shift method.

Set

Q

Day and Date : Thursday, 1-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

Instructions :

- 1) **All** questions are **compulsory**.
- 2) Figures to the **right** indicate **maximum** marks.
- 3) **Assume** suitable data **if required**.
- 4) Q. No. **1** is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. **3**. **Each** question carries **one** mark.
- 5) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(1×20=20)

- 1) Macrocell of CPLD can implement _____ function.
 - a) Combinatorial
 - b) Sequential/registered
 - c) Both a) and b)
 - d) None
- 2) Boundary Scan technique consists of
 - a) Scan path testing port
 - b) Test access port
 - c) Both a) and b)
 - d) None
- 3) To detect N bit sequence using Moore machine, the number of states required
 - a) $2N$
 - b) $N + 1$
 - c) $N - 1$
 - d) $2N - 1$
- 4) A PLA has a
 - a) programmable AND
 - b) programmable AND and OR
 - c) a) and b) both
 - d) none of the above
- 5) The macrocell register can be configured as _____ flip flop.
 - a) D
 - b) T
 - c) D and T
 - d) D or T
- 6) Under steady state condition power dissipated in CMOS circuit is
 - a) 0 W
 - b) $10\text{ }\mu\text{ W}$
 - c) $0.1\text{ }\mu\text{ W}$
 - d) None
- 7) The symbol _____ is the signal assignment operator.
 - a) $:=$
 - b) $<=$
 - c) $=>$
 - d) None of above

P.T.O.

- 8) Transmission Gate in CMOS also called as
 - a) Pass Gate
 - b) Pull – up gate
 - c) Fail Gate
 - d) Pull – down gate
- 9) The block of code which defines the relationship between input, output and internal signal or variable in VHDL
 - a) Architecture
 - b) Entity
 - c) Package
 - d) Library
- 10) To implement 5 input NOR gate using CMOS logic requires _____ numbers of MOSFETs.
 - a) 6
 - b) 8
 - c) 10
 - d) 4
- 11) _____ is not a concurrent statement.
 - a) Generate
 - b) When else
 - c) If – then
 - d) With – Select – when
- 12) The problem of a clock skew occurs in
 - a) Gates
 - b) Sequential circuit
 - c) Combinational circuits
 - d) None
- 13) When an iterative array of identical components is required, the _____ statement provides an easy way of instantiating these components.
 - a) Port map
 - b) For loop
 - c) For Generate
 - d) None
- 14) A process cannot have
 - a) Wait statement
 - b) Wait statement and sensitivity list
 - c) Sensitivity list
 - d) None
- 15) CLK'1 is an attribute type
 - a) EVENT
 - b) Delay
 - c) Stable
 - d) None
- 16) The behaviour of sequential circuit is described in tabular format called
 - a) State table
 - b) Truth table
 - c) State diagram
 - d) Both a) and b)
- 17) Built in self test contains
 - a) Shift register
 - b) Linear feedback shift register
 - c) Compressor circuit
 - d) Both b) and c)
- 18) Logic block of FPGA contains
 - a) Macrocell
 - b) Look-up table
 - c) Both a) and b)
 - d) None
- 19) Stuck-at 0 and stuck-at 1 faults causes due to
 - a) Short circuit fault
 - b) Open circuit fault
 - c) Short and open circuit fault
 - d) None
- 20) Logic within the functional block of CPLD is implemented using

a) Pass Gate b) Pull – up gate
c) Fail Gate d) Pull – down gate
- 14) The block of code which defines the relationship between input, output and internal signal or variable in VHDL
a) Architecture b) Entity c) Package d) Library
- 15) To implement 5 input NOR gate using CMOS logic requires _____ numbers of MOSFETs.
a) 6 b) 8 c) 10 d) 4
- 16) _____ is not a concurrent statement.
a) Generate b) When else
c) If – then d) With – Select – when
- 17) The problem of a clock skew occurs in
a) Gates b) Sequential circuit
c) Combinational circuits d) None
- 18) When an iterative array of identical components is required, the _____ statement provides an easy way of instantiating these components.
a) Port map b) For loop c) For Generate d) None
- 19) A process cannot have
a) Wait statement b) Wait statement and sensitivity list
c) Sensitivity list d) None
- 20) CLK'1 is an attribute type
a) EVENT b) Delay c) Stable d) None

B.E. (E & TC) (Part – I) Examination, 2016
VLSI DESIGN

Day and Date : Thursday, 1-12-2016

Marks : 80

Time : 3.00 p.m. to 6.00 p.m.

- Instructions :** 1) **All questions are compulsory.**
2) **Figures to the right indicate maximum marks.**
3) **Assume suitable data if required.**

SECTION – I

2. Solve **any four** : **(4×4=16)**

- a) For CMOS inverter $C = 50 \text{ fF}$, $V = 3 \text{ V}$ and $F = 100 \text{ MHz}$ calculate dynamic power consumed.
- b) What is pullup and pull down network in CMOS ?
- c) What is Dataflow Modeling ?
- d) Explain the concept of libraries.
- e) Write VHDL code for 3 : 8 decoder.

3. Solve **any three** : **(8×3=24)**

- a) Implement the function using CMOS logic :
 - i) $y = \overline{a + (b + c)(d + e)}$
 - ii) $y = (ab + \overline{cd})e$.
- b) Explain Operator overloading with example.
- c) Explain in detail VHDL Subprogram.
- d) Write VHDL code for 16 : 1 multiplexer using structural modeling.

SECTION – II

4. Solve **any four** :

(4×4=16)

a) Write a VHDL code given state diagram :

b) Design J-K flipflop using state diagram.

c) Write a short note on boundary scan.

d) Write a test bench for 1 bit comparator.

e) Compare CPLD and FPGA.

5. Solve **any three** :

(8×3=24)

a) Explain in detail Macrocell.

b) Explain in detail architecture of FPGA.

c) Design state diagram and write VHDL code for coffee vending machine.

d) Write a VHDL code for 2×2 multiplier using Add and Shift method.

Set **S**

Day and Date : Thursday, 1-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

Instructions :

- 1) **All** questions are **compulsory**.
- 2) Figures to the **right** indicate **maximum** marks.
- 3) **Assume** suitable data **if required**.
- 4) Q. No. **1** is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. **3**. **Each** question carries **one** mark.
- 5) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer : (1×20=20)

- 1) _____ is not a concurrent statement.
a) Generate b) When else
c) If – then d) With – Select – when
- 2) The problem of a clock skew occurs in
a) Gates b) Sequential circuit
c) Combinational circuits d) None
- 3) When an iterative array of identical components is required, the _____ statement provides an easy way of instantiating these components.
a) Port map b) For loop c) For Generate d) None
- 4) A process cannot have
a) Wait statement b) Wait statement and sensitivity list
c) Sensitivity list d) None
- 5) CLK'1 is an attribute type
a) EVENT b) Delay c) Stable d) None
- 6) The behaviour of sequential circuit is described in tabular format called
a) State table b) Truth table c) State diagram d) Both a) and b)
- 7) Built in self test contains
a) Shift register b) Linear feedback shift register
c) Compressor circuit d) Both b) and c)

P.T.O.

- 8) Logic block of FPGA contains
a) Macrocell
b) Look-up table
c) Both a) and b)
d) None
- 9) Stuck-at 0 and stuck-at 1 faults causes due to
a) Short circuit fault
b) Open circuit fault
c) Short and open circuit fault
d) None
- 10) Logic within the functional block of CPLD is implemented using
a) Product-of-some
b) Sum-of-product
c) Both a) and b)
d) None
- 11) Macrocell of CPLD can implement _____ function.
a) Combinatorial
b) Sequential/registered
c) Both a) and b)
d) None
- 12) Boundary Scan technique consists of
a) Scan path testing port
b) Test access port
c) Both a) and b)
d) None
- 13) To detect N bit sequence using Moore machine, the number of states required
a) $2N$
b) $N + 1$
c) $N - 1$
d) $2N - 1$
- 14) A PLA has a
a) programmable AND
b) programmable AND and OR
c) a) and b) both
d) none of the above
- 15) The macrocell register can be configured as _____ flip flop.
a) D
b) T
c) D and T
d) D or T
- 16) Under steady state condition power dissipated in CMOS circuit is
a) 0 W
b) $10 \mu W$
c) $0.1 \mu W$
d) None
- 17) The symbol _____ is the signal assignment operator.
a) $:=$
b) $<=$
c) $=>$
d) None of above
- 18) Transmission Gate in CMOS also called as
a) Pass Gate
b) Pull – up gate
c) Fail Gate
d) Pull – down gate
- 19) The block of code which defines the relationship between input, output and internal signal or variable in VHDL
a) Architecture
b) Entity
c) Package
d) Library
- 20) To implement 5 input NOR gate using CMOS logic requires _____ numbers of MOSFETs.
a) 6
b) 8
c) 10
d) 4

B.E. (Electronics and Telecommunication) Part – I Examination, 2016
SATELLITE COMMUNICATION

Day and Date : Saturday, 3-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

- Instructions:** 1) **All questions are compulsory.**
2) **Figures to the right indicate full marks.**
3) **Q. No. 1 is compulsory. It should be solved in first 30 minutes in Answer Book Page No. 3. Each question carries one mark.**
4) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer : **(20×1=20)**
- 1) _____ is based on a principle of trilateration.
a) Teledesic b) GPS c) Iridium d) VSAT
 - 2) What is the bandwidth of Communication Satellite ?
a) 8 – 16 GHz b) 4 – 6 GHz c) 500 MHz d) 1 – 2 GHz
 - 3) The centrifugal force acting on satellite, $F_{OUT} =$
a) $m \times (v^2/r)$ b) $m^2 \times (v/r)$ c) $m \times (v/r^2)$ d) $m \times (v/r)$
 - 4) Kepler's first law of planetary motion.
a) Orbit of any smaller body about a larger body is always an ellipse
b) Orbit of any smaller body about a larger body is always a circular
c) The orbit of the smaller body sweeps out equal area in equal time
d) None of above
 - 5) The right ascension of the ascending node is called
a) ω b) Ω c) i d) μ
 - 6) The satellite moves upward through the equatorial plane at the
a) Ascending node b) Descending node
c) Inclination d) Right ascension
 - 7) At the Greenwich Meridian the line drawn from the
a) East to West b) Equator
c) North to South Pole d) None of the above

P.T.O.

- 8) Latitude is the angular distance measured in degrees from
a) North Pole
b) South Pole
c) Equator
d) None of the above
- 9) The Doppler shift is negligible for
a) GEO
b) MEO
c) LEO
d) Polar Satellite
- 10) Eclipse occurs during two periods per year, that is _____ days before equinoxes.
a) 21
b) 22
c) 23
d) 24
- 11) The gravitational pull on the satellite due to Sun and Moon tends to change the inclination of the satellite's orbit _____ per year.
a) 75° E
b) 105° W
c) 0.86°
d) 165° E
- 12) At the equator there are bulges of about _____ at longitudes 162° E and 348° E.
a) 65 m
b) 75 m
c) 55 m
d) None of the above
- 13) In LEO satellite _____ is having large coverage area.
a) Equatorial
b) Inclined
c) Molniya
d) None of the above
- 14) Apogee of the molniya satellite at an altitude of
a) 39152 km
b) 35786 km
c) 20200 km
d) 500 km
- 15) Perigee of the molniya satellite at an altitude of
a) 39152 km
b) 35786 km
c) 20200 km
d) 500 km
- 16) Two molniya orbits planes separated by
a) 90°
b) 180°
c) 0°
d) 360°
- 17) Sun synchronous orbit maintains a constant angle with the direction of
a) Earth
b) Sun
c) Moon
d) Sub satellite point
- 18) GPS space segment consists of _____ satellites in MEO.
a) 24
b) 22
c) 20
d) 18
- 19) GPS satellite constellation separated by _____ in longitude.
a) 60°
b) 30°
c) 120°
d) 180°
- 20) In GPS which code has high accuracy?
a) C/A
b) P
c) Both a) and b)
d) None of the above

B.E. (Electronics and Telecommunication) Part – I Examination, 2016
SATELLITE COMMUNICATION

Day and Date : Saturday, 3-12-2016

Marks : 80

Time : 3.00 p.m. to 6.00 p.m.

Instructions : 1) **All questions are compulsory.**
2) **Figures to the right indicate full marks.**

SECTION – I

2. Solve **any four** : **(4×4=16)**
- 1) What is latitude, longitude and sub satellite point ?
 - 2) Explain the procedure for locating the satellite in the orbit.
 - 3) Discuss Kepler's three laws of planetary motion.
 - 4) Describe Attitude and Orbit Control System (AOCS).
 - 5) A satellite at a distance of 40000 km from a point on the earth's surface radiates a power of 10 W from an antenna with a gain of 17 dB in the direction of the observer. Find the flux density at the receiving point and the power received by an antenna at this point with an effective area of 10 m².
3. Solve **any three** : **(3×8=24)**
- 1) Develop the equation of orbit.
 - 2) Describe in detail inclination changes effects of the Sun and Moon.
 - 3) Write a short note on satellite subsystems.
 - 4) Explain calculation of system noise temperature.

SECTION – II

4. Solve **any four** : **(4×4=16)**
- 1) Explain in detail molniya orbit.
 - 2) What is Sun synchronous orbit ? What are its applications ?
 - 3) Describe delay and through put considerations.
 - 4) Write a short note on incremental growth and interim operations of satellite.
 - 5) Explain types of earth stations.
5. Solve **any three** : **(3×8=24)**
- 1) Write a short note on equatorial orbits, inclined orbits and elliptical orbits.
 - 2) Explain frequency band considerations in LEO satellites.
 - 3) Describe elevation angle considerations in LEO satellites.
 - 4) What are earth station design considerations ?

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) The satellite moves upward through the equatorial plane at the
 - a) Ascending node
 - b) Descending node
 - c) Inclination
 - d) Right ascension
- 2) At the Greenwich Meridian the line drawn from the
 - a) East to West
 - b) Equator
 - c) North to South Pole
 - d) None of the above
- 3) Latitude is the angular distance measured in degrees from
 - a) North Pole
 - b) South Pole
 - c) Equator
 - d) None of the above
- 4) The Doppler shift is negligible for
 - a) GEO
 - b) MEO
 - c) LEO
 - d) Polar Satellite
- 5) Eclipse occurs during two period per year, that is _____ days before equinoxes.
 - a) 21
 - b) 22
 - c) 23
 - d) 24
- 6) The gravitational pull on the satellite due to Sun and Moon tends to change the inclination of the satellite's orbit _____ per year.
 - a) 75° E
 - b) 105° W
 - c) 0.86°
 - d) 165° E
- 7) At the equator there are bulges of about _____ at longitudes 162° E and 348° E.
 - a) 65 m
 - b) 75 m
 - c) 55 m
 - d) None of the above

P.T.O.

- 8) In LEO satellite _____ is having large coverage area.
a) Equatorial b) Inclined
c) Molniya d) None of the above
- 9) Apogee of the molniya satellite at an altitude of
a) 39152 km b) 35786 km c) 20200 km d) 500 km
- 10) Perigee of the molniya satellite at an altitude of
a) 39152 km b) 35786 km c) 20200 km d) 500 km
- 11) Two molniya orbits plans separated by
a) 90° b) 180° c) 0° d) 360°
- 12) Sun synchronous orbit maintains a constant angle with the direction of
a) Earth b) Sun
c) Moon d) Sub satellite point
- 13) GPS space segment consist of _____ satellites in MEO.
a) 24 b) 22 c) 20 d) 18
- 14) GPS satellite constellation separated by _____ in longitude.
a) 60° b) 30° c) 120° d) 180°
- 15) In GPS which code having high accuracy ?
a) C/A b) P
c) Both a) and b) d) None of the above
- 16) _____ is based on a principle of trilateration.
a) Teledesic b) GPS c) Iridium d) VSAT
- 17) What is the bandwidth of Communication Satellite ?
a) 8 – 16 GHz b) 4 – 6 GHz c) 500 MHz d) 1 – 2 GHz
- 18) The centrifugal force acting on satellite, $F_{OUT} =$
a) $m \times (v^2/r)$ b) $m^2 \times (v/r)$ c) $m \times (v/r^2)$ d) $m \times (v/r)$
- 19) Kepler's first law of planetary motion.
a) Orbit of any smaller body about a larger body is always an ellipse
b) Orbit of any smaller body about a larger body is always a circular
c) The orbit of the smaller body sweeps out equal area in equal time
d) None of above
- 20) The right ascension of the ascending node is called
a) ω b) Ω c) i d) μ

B.E. (Electronics and Telecommunication) Part – I Examination, 2016
SATELLITE COMMUNICATION

Day and Date : Saturday, 3-12-2016

Marks : 80

Time : 3.00 p.m. to 6.00 p.m.

Instructions : 1) **All questions are compulsory.**
2) **Figures to the right indicate full marks.**

SECTION – I

2. Solve **any four** : **(4×4=16)**
- 1) What is latitude, longitude and sub satellite point ?
 - 2) Explain the procedure for locating the satellite in the orbit.
 - 3) Discuss Kepler's three laws of planetary motion.
 - 4) Describe Attitude and Orbit Control System (AOCS).
 - 5) A satellite at a distance of 40000 km from a point on the earth's surface radiates a power of 10 W from an antenna with a gain of 17 dB in the direction of the observer. Find the flux density at the receiving point and the power received by an antenna at this point with an effective area of 10 m².
3. Solve **any three** : **(3×8=24)**
- 1) Develop the equation of orbit.
 - 2) Describe in detail inclination changes effects of the Sun and Moon.
 - 3) Write a short note on satellite subsystems.
 - 4) Explain calculation of system noise temperature.

SECTION – II

4. Solve **any four** : **(4×4=16)**
- 1) Explain in detail molniya orbit.
 - 2) What is Sun synchronous orbit ? What are its applications ?
 - 3) Describe delay and through put considerations.
 - 4) Write a short note on incremental growth and interim operations of satellite.
 - 5) Explain types of earth stations.
5. Solve **any three** : **(3×8=24)**
- 1) Write a short note on equatorial orbits, inclined orbits and elliptical orbits.
 - 2) Explain frequency band considerations in LEO satellites.
 - 3) Describe elevation angle considerations in LEO satellites.
 - 4) What are earth station design considerations ?

B.E. (E and TC) (Part – I) Examination, 2016
CODING THEORY

Day and Date : Tuesday, 6-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

- Instructions :** 1) **All questions are compulsory.**
2) **Q. No. 1 is compulsory. It should be solved in first 30 minutes in Answer Book Page No. 3. Each question carries one mark.**
3) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

20

- 1) For a code rate $2/3$, transition from each state in state diagram of convolutional code are
 - a) 2
 - b) 4
 - c) data is insufficient
 - d) none of these
- 2) Free distance of non-systematic convolutional code is _____ than that of systematic convolutional code for same code rate.
 - a) More
 - b) Less
 - c) Equal
 - d) None of these
- 3) No. of disjoint cells required to implement decoder for convolutional codes are
 - a) 2^{k-1}
 - b) 2^{k-2}
 - c) 2^k
 - d) None of these
- 4) The exponent of D in transfer function gives
 - a) Free distance
 - b) No. of decoded one bit
 - c) No. of decoded zero bit
 - d) Length of the path
- 5) The parity check matrix of (n, k) block code is of the order of
 - a) $n \times k$
 - b) $k \times n$
 - c) $(n - k) \times n$
 - d) $k \times (n - k)$
- 6) Generator matrix is used for
 - a) Encoding
 - b) Decoding
 - c) Standard array
 - d) None of these
- 7) In a standard array number of coset leaders in $(5, 2)$ code are _____
 - a) 5
 - b) 2
 - c) 3
 - d) 8
- 8) Check which of the following is Hamming code.
 - a) $(7, 4)$
 - b) $(7, 3)$
 - c) $(6, 3)$
 - d) $(8, 2)$
- 9) For a generator polynomial $g(x) = 1 + x + x^3$. The cyclic code for this polynomial is
 - a) $(7, 4)$
 - b) $(8, 5)$
 - c) $(7, 3)$
 - d) $(6, 3)$

P.T.O.

- 10) If a valid codeword in non-systematic cyclic code is 1101. Which of the following is also a valid codeword ?
 a) 0000 b) 1011 c) 0110 d) 1001
- 11) A turbo code
 a) is concatenated code b) uses interleaver
 c) uses iterating decoding d) all of these
- 12) Non-systematic convolutional encoder is
 a) FIR system b) IIR system c) Both d) None of these
- 13) For convolutional code, $g_1 = 111$ and $g_2 = 101$. The code rate and constraint length of this encoder is
 a) $1/2, 3$ b) $1/3, 2$ c) $1/2, 2$ d) $1/3, 3$
- 14) The total area under probability distribution curve is
 a) 0 b) 1
 c) depends on distribution d) none of these
- 15) Let A and B be two events. If $P(A) = \frac{3}{4}$, $P(B) = \frac{1}{2}$, $P(A \cup B) = 1$ and $P(A \cap B) = \frac{1}{4}$, then the conditional probability of B given A is
 a) $\frac{1}{3}$ b) $\frac{3}{4}$ c) $\frac{1}{2}$ d) $\frac{1}{4}$
- 16) Two fair six-sided die are rolled and the face values are added. The probability of obtaining an even number greater than 9 is
 a) $\frac{1}{6}$ b) $\frac{2}{9}$ c) $\frac{1}{9}$ d) $\frac{1}{18}$
- 17) Find the constant C so that

$$f(x) = C(x - 2) \quad \text{for } 1 < x < 4$$

$$= 0 \quad \text{otherwise}$$
 a) 1 b) 2 c) $1/4$ d) $1/2$
- 18) Calculated _____ is added to received vector to obtain valid code vector.
 a) Syndrome b) Error pattern c) a) or b) d) None of these
- 19) In block coding, if $k = 5$ and $n = 8$, we have _____ k tuples.
 a) 13 b) 32 c) 4096 d) 64
- 20) Viterbi decoding algorithm can be implemented using _____ computation.
 a) Add-compare-select b) Compare-add-select
 c) Add-select-compare d) Compare-select-add

Seat No.	
-------------	--

B.E. (E and TC) (Part – I) Examination, 2016
CODING THEORY

Day and Date : Tuesday, 6-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

Instructions: 1) **All questions are compulsory.**
2) **Assume** suitable data of **necessary.**

SECTION – I

2. A) Attempt **any two** :

12

- a) A newly constructed flyover is likely to collapse. The chance that design is faulty is 0.5. The chance that flyover will collapse if the design is faulty is 0.95 otherwise it is 0.30. The flyover collapsed. What is the probability that flyover will collapse because of faulty design ?
- b) For (7, 4) cyclic code, check whether given generator polynomial $g(x) = 1 + x^2 + x^3$ generates cyclic code or not.
- c) The generator matrix of (6, 3) systematic block code is given by

$$G = \begin{bmatrix} 1 & 0 & 0 & 1 & 1 & 1 \\ 0 & 1 & 0 & 1 & 0 & 1 \\ 0 & 0 & 1 & 1 & 1 & 0 \end{bmatrix}$$

Find decoding table.

B) For (7, 3) block code for a given parity matrix

8

$$P = \begin{bmatrix} 1 & 1 & 0 & 0 \\ 0 & 1 & 1 & 0 \\ 1 & 1 & 1 & 1 \end{bmatrix}$$

- i) What is the generator matrix for this code ?
- ii) Find all the code words.
- iii) What will be the error-correcting capability ?
- iv) What will be the error-detecting capability ?

Set P

3. A) Attempt **any two** :

8

- a) The generator polynomial for (15, 7) cyclic code is $g(x) = 1 + x^4 + x^6 + x^7 + x^8$. Find the code vector for message polynomial $m(x) = x^2 + x^3 + x^4$ using systematic method.
- b) How error detection and correction is done in cyclic code ? Explain it.
- c) State and prove Bayes theorem.

B) a) Find the value of k such that following will be probability density function.

$$f_x(x) = k \cdot x \quad 0 \leq x \leq 1$$

$$= k \quad 1 \leq x \leq 2$$

$$= k(3 - x) \quad 2 \leq x \leq 3$$

Also find $P(x \leq 1.5)$.

8

- b) A card is drawn at random from an ordinary deck of 52 playing cards. Find the probability of being :
 - i) an ace
 - ii) a six or a heart.

4

SECTION – II

4. A) Attempt **any three** :

12

- a) Explain maximum likelihood algorithm used in convolutional codes.
- b) For convolutional encoder, whose generator sequences are $g_1 = 111$, $g_2 = 101$:
 - i) Draw state diagram representing starting state and ending state separately.
 - ii) Write state equations.
- c) Define :
 - i) Coding gain
 - ii) Catastrophic error propagation.
- d) Explain in brief Turbo encoder.

B) For the given convolutional encoder.

8

- i) Draw encoder trellis diagram.
- ii) Find transfer function.

5. A) Attempt **any two** :

10

- a) Explain principle of iterative Turbo decoding.
- b) Explain soft decision Viterbi decoding.
- c) Explain how impulse response can be used to find encoded sequence of convolutional encoder.

B) For a convolutional encoder rate = $\frac{1}{2}$, generator sequences are $g_1 = 111$ and $g_2 = 101$:

10

- i) Draw encoder trellis diagram.
- ii) Draw decoder trellis diagram.
- iii) Find encoded output for input message 1010 from trellis diagram.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

20

- 1) A turbo code
 - a) is concatenated code
 - b) uses interleaver
 - c) uses iterating decoding
 - d) all of these
- 2) Non-systematic convolutional encoder is
 - a) FIR system
 - b) IIR system
 - c) Both
 - d) None of these
- 3) For convolutional code, $g_1 = 111$ and $g_2 = 101$. The code rate and constraint length of this encoder is
 - a) $1/2, 3$
 - b) $1/3, 2$
 - c) $1/2, 2$
 - d) $1/3, 3$
- 4) The total area under probability distribution curve is
 - a) 0
 - b) 1
 - c) depends on distribution
 - d) none of these
- 5) Let A and B be two events. If $P(A) = \frac{3}{4}$, $P(B) = \frac{1}{2}$, $P(A \cup B) = 1$ and $P(A \cap B) = \frac{1}{4}$, then the conditional probability of B given A is
 - a) $\frac{1}{3}$
 - b) $\frac{3}{4}$
 - c) $\frac{1}{2}$
 - d) $\frac{1}{4}$
- 6) Two fair six-sided die are rolled and the face values are added. The probability of obtaining an even number greater than 9 is
 - a) $\frac{1}{6}$
 - b) $\frac{2}{9}$
 - c) $\frac{1}{9}$
 - d) $\frac{1}{18}$

P.T.O.

- 7) Find the constant C so that
- $$f(x) = C(x - 2) \quad \text{for } 1 < x < 4$$
- $$= 0 \quad \text{otherwise}$$
- a) 1 b) 2 c) 1/4 d) 1/2

12

- a) A newly constructed flyover is likely to collapse. The chance that design is faulty is 0.5. The chance that flyover will collapse if the design is faulty is 0.95 otherwise it is 0.30. The flyover collapsed. What is the probability that flyover will collapse because of faulty design ?
- b) For (7, 4) cyclic code, check whether given generator polynomial $g(x) = 1 + x^2 + x^3$ generates cyclic code or not.
- c) The generator matrix of (6, 3) systematic block code is given by

$$G = \begin{bmatrix} 1 & 0 & 0 & 1 & 1 & 1 \\ 0 & 1 & 0 & 1 & 0 & 1 \\ 0 & 0 & 1 & 1 & 1 & 0 \end{bmatrix}$$

Find decoding table.

B) For (7, 3) block code for a given parity matrix

8

$$P = \begin{bmatrix} 1 & 1 & 0 & 0 \\ 0 & 1 & 1 & 0 \\ 1 & 1 & 1 & 1 \end{bmatrix}$$

- i) What is the generator matrix for this code ?
- ii) Find all the code words.
- iii) What will be the error-correcting capability ?
- iv) What will be the error-detecting capability ?

Set R

3. A) Attempt **any two** :

8

- a) The generator polynomial for (15, 7) cyclic code is $g(x) = 1 + x^4 + x^6 + x^7 + x^8$. Find the code vector for message polynomial $m(x) = x^2 + x^3 + x^4$ using systematic method.
- b) How error detection and correction is done in cyclic code ? Explain it.
- c) State and prove Bayes theorem.

B) a) Find the value of k such that following will be probability density function.

$$f_x(x) = k \cdot x \quad 0 \leq x \leq 1$$

$$= k \quad 1 \leq x \leq 2$$

$$= k(3 - x) \quad 2 \leq x \leq 3$$

Also find $P(x \leq 1.5)$.

8

- b) A card is drawn at random from an ordinary deck of 52 playing cards. Find the probability of being :
 - i) an ace
 - ii) a six or a heart.

4

SECTION – II

4. A) Attempt **any three** :

12

- a) Explain maximum likelihood algorithm used in convolutional codes.
- b) For convolutional encoder, whose generator sequences are $g_1 = 111$, $g_2 = 101$:
 - i) Draw state diagram representing starting state and ending state separately.
 - ii) Write state equations.
- c) Define :
 - i) Coding gain
 - ii) Catastrophic error propagation.
- d) Explain in brief Turbo encoder.

B) For the given convolutional encoder.

8

- i) Draw encoder trellis diagram.
- ii) Find transfer function.

5. A) Attempt **any two** :

10

- a) Explain principle of iterative Turbo decoding.
- b) Explain soft decision Viterbi decoding.
- c) Explain how impulse response can be used to find encoded sequence of convolutional encoder.

B) For a convolutional encoder rate = $\frac{1}{2}$, generator sequences are $g_1 = 111$ and $g_2 = 101$:

10

- i) Draw encoder trellis diagram.
- ii) Draw decoder trellis diagram.
- iii) Find encoded output for input message 1010 from trellis diagram.

**B.E. (E and TC) (Part – I) Examination, 2016
CODING THEORY**

Day and Date : Tuesday, 6-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

- Instructions :** 1) **All questions are compulsory.**
2) **Q. No. 1 is compulsory. It should be solved in first 30 minutes in Answer Book Page No. 3. Each question carries one mark.**
3) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

20

- 1) Generator matrix is used for
 - a) Encoding
 - b) Decoding
 - c) Standard array
 - d) None of these
- 2) In a standard array number of coset leaders in (5, 2) code are _____
 - a) 5
 - b) 2
 - c) 3
 - d) 8
- 3) Check which of the following is Hamming code.
 - a) (7, 4)
 - b) (7, 3)
 - c) (6, 3)
 - d) (8, 2)
- 4) For a generator polynomial $g(x) = 1 + x + x^3$. The cyclic code for this polynomial is
 - a) (7, 4)
 - b) (8, 5)
 - c) (7, 3)
 - d) (6, 3)
- 5) If a valid codeword in non-systematic cyclic code is 1101. Which of the following is also a valid codeword ?
 - a) 0000
 - b) 1011
 - c) 0110
 - d) 1001
- 6) A turbo code
 - a) is concatenated code
 - b) uses interleaver
 - c) uses iterating decoding
 - d) all of these
- 7) Non-systematic convolutional encoder is
 - a) FIR system
 - b) IIR system
 - c) Both
 - d) None of these
- 8) For convolutional code, $g_1 = 111$ and $g_2 = 101$. The code rate and constraint length of this encoder is
 - a) $1/2, 3$
 - b) $1/3, 2$
 - c) $1/2, 2$
 - d) $1/3, 3$
- 9) The total area under probability distribution curve is
 - a) 0
 - b) 1
 - c) depends on distribution
 - d) none of these

P.T.O.

- 10) Let A and B be two events. If $P(A) = \frac{3}{4}$, $P(B) = \frac{1}{2}$, $P(A \cup B) = 1$ and $P(A \cap B) = \frac{1}{4}$, then the conditional probability of B given A is
- a) $\frac{1}{3}$ b) $\frac{3}{4}$ c) $\frac{1}{2}$ d) $\frac{1}{4}$
- 11) Two fair six-sided die are rolled and the face values are added. The probability of obtaining an even number greater than 9 is
- a) $\frac{1}{6}$ b) $\frac{2}{9}$ c) $\frac{1}{9}$ d) $\frac{1}{18}$
- 12) Find the constant C so that
- $$f(x) = C(x - 2) \quad \text{for } 1 < x < 4$$
- $$= 0 \quad \text{otherwise}$$
- a) 1 b) 2 c) $\frac{1}{4}$ d) $\frac{1}{2}$
- 13) Calculated _____ is added to received vector to obtain valid code vector.
- a) Syndrome b) Error pattern c) a) or b) d) None of these
- 14) In block coding, if $k = 5$ and $n = 8$, we have _____ k tuples.
- a) 13 b) 32 c) 4096 d) 64
- 15) Viterbi decoding algorithm can be implemented using _____ computation.
- a) Add-compare-select b) Compare-add-select
c) Add-select-compare d) Compare-select-add
- 16) For a code rate $\frac{2}{3}$, transition from each state in state diagram of convolutional code are
- a) 2 b) 4
c) data is insufficient d) none of these
- 17) Free distance of non-systematic convolutional code is _____ than that of systematic convolutional code for same code rate.
- a) More b) Less c) Equal d) None of these
- 18) No. of disjoint cells required to implement decoder for convolutional codes are
- a) 2^{k-1} b) 2^{k-2} c) 2^k d) None of these
- 19) The exponent of D in transfer function gives
- a) Free distance b) No. of decoded one bit
c) No. of decoded zero bit d) Length of the path
- 20) The parity check matrix of (n, k) block code is of the order of
- a) $n \times k$ b) $k \times n$ c) $(n - k) \times n$ d) $k \times (n - k)$

3) **All questions are compulsory.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

20

- 1) User data is transferred in which of the frame mode protocol
 - a) LAPF control
 - b) LAPF core
 - c) Circuit switching
 - d) None of these
- 2) Which of the following is slower but reliable frame mode protocol
 - a) Frame relay
 - b) Frame switching
 - c) Circuit switching
 - d) None of these
- 3) ISDN uses _____ multiplexing and modulation scheme.
 - a) TDM-PCM
 - b) FDM-AM
 - c) Both a) and b)
 - d) None of these
- 4) ISDN uses
 - a) Inband signaling
 - b) Outband signaling
 - c) Common channel signaling
 - d) None of these
- 5) Maximum capacity with basic access of ISDN is
 - a) 192 Kbps
 - b) 1.5 Mbps
 - c) 64 Kbps
 - d) None of these
- 6) The main data channel for ordinary ISDN user is
 - a) B channel
 - b) D channel
 - c) H channel
 - d) None of these
- 7) TE of type 1 means
 - a) ISDN device
 - b) Non-ISDN device
 - c) Terminal adapter
 - d) None of these
- 8) Primary access means
 - a) $30B + 1D$
 - b) $23B + 1D$
 - c) Both a) and b)
 - d) None of these
- 9) AAL type 1 means
 - a) conn.oriented, constant bit rate
 - b) conn.oriented, variable bit rate
 - c) conn.less, constant bit rate
 - d) none of these

P.T.O.

- 10) GFC is required at _____ interface.
- a) Network network
 - b) User-network
 - c) User-user
 - d) None of these
- 11) Maximum number of buffers are required in case of
- a) Input buffers
 - b) Output buffers
 - c) Crosspoint buffers
 - d) None of these
- 12) Output lines same as input lines in case of _____ network.
- a) Funnel type
 - b) Shuffle exchange
 - c) Extended matrix
 - d) None of these
- 13) ATM breaks all traffic into 53-Byte cells because
- a) 53-Byte cells are the ideal size for the voice communication
 - b) 53-Byte cells are the ideal size for data communication
 - c) 53-Byte cells are the ideal size for circuit switching
 - d) 53-Byte cells are the compromised size for both voice and data communication
- 14) E-mail is _____ type of B-ISDN service.
- a) Conversational
 - b) Messaging
 - c) Retrieval
 - d) None of these
- 15) Virtual path is made up of virtual
- a) Circuits
 - b) Channels
 - c) Cells
 - d) None of these
- 16) Which of the following is done in the physical layer of the ATM network ?
- a) Cell multiplexing and demultiplexing
 - b) Generic flow control
 - c) Transmission frame generation/recovery
 - d) Monitoring of the user information field for bit errors and possible corrective actions
- 17) What advantages does ATM have over STM ?
- a) Unlike ATM, time slots provided by STM for a particular user cannot be grabbed by another user
 - b) It is cheaper to implement
 - c) ATM is suitable for real time traffic but not ATM
 - d) Time slots for STM occurs at regular intervals
- 18) ISDN relies on standard voice data rate of
- a) 192 Kbps
 - b) 64 Kbps
 - c) 1.5 Mbps
 - d) None of these
- 19) Basic access means
- a) B + D
 - b) 2B + 1D
 - c) 4B + D
 - d) None of these
- 20) Which of the following channels has highest data rate ?
- a) B channel
 - b) H channel
 - c) D channel

Marks : 80

Instruction: All questions are compulsory.

SECTION – I

2. Answer **any four** : **(4×5=20)**
- a) Explain X.25 packet switching protocol. 5
 - b) Discuss various link layer core parameters. 5
 - c) Explain in detail integration of transmission and switching. 5
 - d) Explain ISDN architecture. 5
 - e) Write a note on ISDN addressing. 5
3. Answer **any two** : **(2×10=20)**
- a) Along with proper diagram discuss I-series of recommendations. 10
 - b) Explain in detail frame mode protocol architecture. 10
 - c) Explain ISDN interworking. 10

SECTION – II

4. Write notes on **any four** : **(4×5=20)**
- a) B-ISDN services 5
 - b) Header Error Control (HEC) 5
 - c) AAL services and protocols 5
 - d) ATM switching element 5
 - e) Buffering in ATM. 5
5. Answer **any two** : **(2×10=20)**
- a) Explain the call establishment using VP. 10
 - b) Draw and explain cell delineation state diagram. 10
 - c) Draw and explain neat diagram of extended matrix switching element. 10

B.E. (E and TC) (Part – II) (Old) Examination, 2016
BROADBAND COMMUNICATION

Day and Date : Monday, 21-11-2016

Marks : 80

Time : 3.00 p.m. to 6.00 p.m.

Instruction: All questions are compulsory.

SECTION – I

2. Answer **any four** : **(4×5=20)**
- a) Explain X.25 packet switching protocol. 5
 - b) Discuss various link layer core parameters. 5
 - c) Explain in detail integration of transmission and switching. 5
 - d) Explain ISDN architecture. 5
 - e) Write a note on ISDN addressing. 5
3. Answer **any two** : **(2×10=20)**
- a) Along with proper diagram discuss I-series of recommendations. 10
 - b) Explain in detail frame mode protocol architecture. 10
 - c) Explain ISDN interworking. 10

SECTION – II

4. Write notes on **any four** : **(4×5=20)**
- a) B-ISDN services 5
 - b) Header Error Control (HEC) 5
 - c) AAL services and protocols 5
 - d) ATM switching element 5
 - e) Buffering in ATM. 5
5. Answer **any two** : **(2×10=20)**
- a) Explain the call establishment using VP. 10
 - b) Draw and explain cell delineation state diagram. 10
 - c) Draw and explain neat diagram of extended matrix switching element. 10

B.E. (E and TC) (Part – II) (Old) Examination, 2016
BROADBAND COMMUNICATION

Day and Date : Monday, 21-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Total Marks : 100

- Instructions:** 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
3) **All questions are compulsory.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

20

- 1) The main data channel for ordinary ISDN user is
 - a) B channel
 - b) D channel
 - c) H channel
 - d) None of these
- 2) TE of type 1 means
 - a) ISDN device
 - b) Non-ISDN device
 - c) Terminal adapter
 - d) None of these
- 3) Primary access means
 - a) 30 B + 1D
 - b) 23 B + 1 D
 - c) Both a) and b)
 - d) None of these
- 4) AAL type 1 means
 - a) conn.oriented, constant bit rate
 - b) conn.oriented, variable bit rate
 - c) conn.less, constant bit rate
 - d) none of these
- 5) GFC is required at _____ interface.
 - a) Network network
 - b) User-network
 - c) User-user
 - d) None of these
- 6) Maximum number of buffers are required in case of
 - a) Input buffers
 - b) Output buffers
 - c) Crosspoint buffers
 - d) None of these
- 7) Output lines same as input lines in case of _____ network.
 - a) Funnel type
 - b) Shuffle exchange
 - c) Extended matrix
 - d) None of these
- 8) ATM breaks all traffic into 53-Byte cells because
 - a) 53-Byte cells are the ideal size for the voice communication
 - b) 53-Byte cells are the ideal size for data communication
 - c) 53-Byte cells are the ideal size for circuit switching
 - d) 53-Byte cells are the compromised size for both voice and data communication

P.T.O.

- 9) E-mail is _____ type of B-ISDN service.
a) Conversational b) Messaging c) Retrieval d) None of these
- 10) Virtual path is made up of virtual
a) Circuits b) Channels c) Cells d) None of these
- 11) Which of the following is done in the physical layer of the ATM network ?
a) Cell multiplexing and demultiplexing
b) Generic flow control
c) Transmission frame generation/recovery
d) Monitoring of the user information field for bit errors and possible corrective actions
- 12) What advantages does ATM have over STM ?
a) Unlike ATM, time slots provided by STM for a particular user cannot be grabbed by another user
b) It is cheaper to implement
c) ATM is suitable for real time traffic but not STM
d) Time slots for STM occurs at regular intervals
- 13) ISDN relies on standard voice data rate of
a) 192 Kbps b) 64 Kbps c) 1.5 Mbps d) None of these
- 14) Basic access means
a) B + D b) 2B + 1D c) 4B + D d) None of these
- 15) Which of the following channels has highest data rate ?
a) B channel b) H channel c) D channel d) None of these
- 16) User data is transferred in which of the frame mode protocol
a) LAPF control b) LAPF core
c) Circuit switching d) None of these
- 17) Which of the following is slower but reliable frame mode protocol
a) Frame relay b) Frame switching
c) Circuit switching d) None of these
- 18) ISDN uses _____ multiplexing and modulation scheme.
a) TDM-PCM b) FDM-AM c) Both a) and b) d) None of these
- 19) ISDN uses
a) Inband signaling b) Outband signaling
c) Common channel signaling d) None of these
- 20) Maximum capacity with basic access of ISDN is
a) 192 Kbps b) 1.5 Mbps c) 64 Kbps d) None of these
-

Day and Date : Tuesday, 22-11-2016

Max. Marks : 100

Time : 3.00 p.m. to 6.00 p.m.

- Instructions :** 1) Draw **neat** diagrams **wherever** necessary.
2) Assume suitable data, if **necessary**.
3) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
4) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct alternatives :

(20×1=20)

- 1) Static convergence is done for the _____ of the screen.
A) Center B) Edges C) Left D) Right
- 2) Which of the following is false ?
A) The lens inverts the optical image on the faceplate of the camera tube
B) The composite video signal includes the camera signal and syncnot blanking
C) The standard composite video from a camera is 1V p-p with negative sync
D) The plumbicon uses a lead oxide layer for the target plate
- 3) In color picture tube, degaussing should be done _____ the color purity adjustments.
A) After B) Before C) Either way D) None at all
- 4) Which of the following takes more time ?
A) H retrace B) H trace C) V retrace D) V trace
- 5) How many H lines are there in a complete frame ?
A) 19 lines B) 21 lines C) 262½ lines D) 600 lines
- 6) How many H lines are there in each V retrace ?
A) One B) Two C) Three D) Four
- 7) What are the frequencies of H scanning, H sync and H blanking ?
A) 15,750 Hz B) 16,750 Hz C) 31,500 Hz D) 30,050 Hz

P.T.O.

- 8) Which of the following is not true ?
A) Line pairing indicates poor interlacing
B) People look too tall and too thin on a square raster on the picture tube screen
C) A person can appear to have one shoulder wider than the other because of nonlinear horizontal scanning
D) The keystone effect produces a square raster
- 9) What does the color fringing on the edge of the picture shows ?
A) Misconvergence
B) Insufficient signal drive
C) Turned off guns
D) Red cloud
- 10) In video signal analysis, what are the three parts of the composite video signal, for two horizontal lines in the picture ?
A) Camera signal B) H sync C) H blanking D) All of the above
- 11) What are the approximate time periods for the visible H trace ?
A) 5 B) 0.93 C) 10.2 D) 53.5
- 12) Which pulses in V blanking correspond to the 21H lines wide ?
A) V sync B) V blanking C) Equalizing D) All of the above
- 13) Which pulses in V blanking correspond to the 31,500 Hz ?
A) V sync B) V blanking C) Equalizing D) All of these
- 14) The average dc level is close to the blanking level for a _____ scene.
A) Light B) Dark
C) Either dark or light D) Neither dark nor light
- 15) The color with the most luminance is
A) Red B) Yellow C) Green D) Blue
- 16) What is the hue of a color 90° leading sync burst phase ?
A) Yellow B) Cyan C) Blue D) Orange
- 17) The second IF value for color in receivers, for any station, is
A) 0.5 MHz B) 1.3 MHz C) 3.58 MHz D) 4.5 MHz
- 18) If the 3.58 – MHz C amplifier in the receiver does not operate, the result will be
A) No color B) No red
C) Too much blue D) Too much yellow
- 19) Which system can be used for both recording and playback ?
A) CEO B) VHD C) Laser disk D) VHS
- 20) The hue 180° out of phase with red is
A) Cyan B) Yellow C) Green D) Blue

Examination, 2016
AUDIO-VIDEO ENGINEERING**

Day and Date : Tuesday, 22-11-2016

Marks : 80

Time : 3.00 p.m. to 6.00 p.m.

Instructions : 1) Draw *neat* diagrams *wherever* necessary.
2) Assume suitable data, if *necessary*.

SECTION – I

2. Attempt **any four** : **16**
- 1) Explain principle of recording in brief.
 - 2) What is DC and AC biasing ?
 - 3) Write short note on audio capture and compression.
 - 4) Explain vestigial side band transmission.
 - 5) Brief the factors that decides choice of IF in TV systems.
3. Solve **any three** : **24**
- 1) Draw and explain the receiver of monochrome TV.
 - 2) Draw and explain the disc recording system.
 - 3) List the elements of multimedia system and explain need of multimedia audio video applications.
 - 4) Draw and explain the construction of image orthicon tube.

SECTION – II

4. Write short note on : **16**
- 1) Interleaving process.
 - 2) Chromaticity diagram.
 - 3) AFT and AGC.
 - 4) Satellite television.
5. Solve **any three** : **24**
- 1) Draw the block diagram of PAL coder and decoder and explain in brief.
 - 2) Draw the block diagram of HDTV and explain in brief.
 - 3) Draw and explain the principle of DVD player. Explain recording and play back in detail.
 - 4) Compare PAL SECAM and NTSC systems.

- 17) Which of the following is false ?
A) The lens inverts the optical image on the faceplate of the camera tube
B) The composite video signal includes the camera signal and syncnot blanking
C) The standard composite video from a camera is 1V p-p with negative sync
D) The plumbicon uses a lead oxide layer for the target plate
- 18) In color picture tube, degaussing should be done _____ the color purity adjustments.
A) After B) Before C) Either way D) None at all
- 19) Which of the following takes more time ?
A) H retrace B) H trace C) V retrace D) V trace
- 20) How many H lines are there in a complete frame ?
A) 19 lines B) 21 lines C) 262½ lines D) 600 lines

B.E. (Electronics and Telecommunication Engg.) (Part – II) (Old)
Examination, 2016
AUDIO-VIDEO ENGINEERING

Day and Date : Tuesday, 22-11-2016

Marks : 80

Time : 3.00 p.m. to 6.00 p.m.

Instructions : 1) Draw *neat* diagrams *wherever* necessary.
2) Assume suitable data, if *necessary*.

SECTION – I

2. Attempt **any four** : **16**
- 1) Explain principle of recording in brief.
 - 2) What is DC and AC biasing ?
 - 3) Write short note on audio capture and compression.
 - 4) Explain vestigial side band transmission.
 - 5) Brief the factors that decides choice of IF in TV systems.
3. Solve **any three** : **24**
- 1) Draw and explain the receiver of monochrome TV.
 - 2) Draw and explain the disc recording system.
 - 3) List the elements of multimedia system and explain need of multimedia audio video applications.
 - 4) Draw and explain the construction of image orthicon tube.

SECTION – II

4. Write short note on : **16**
- 1) Interleaving process.
 - 2) Chromaticity diagram.
 - 3) AFT and AGC.
 - 4) Satellite television.
5. Solve **any three** : **24**
- 1) Draw the block diagram of PAL coder and decoder and explain in brief.
 - 2) Draw the block diagram of HDTV and explain in brief.
 - 3) Draw and explain the principle of DVD player. Explain recording and play back in detail.
 - 4) Compare PAL SECAM and NTSC systems.

Set S

SLR-EP – 155

Seat No.

Set **P**

**B.E. (E&TC) (Part – II) (Old) Examination, 2016
EMBEDDED SYSTEMS**

Day and Date : Wednesday, 23-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

- Instructions :** 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
3) Assume suitable data **if required**.
4) Figure to **right** indicate **full** marks.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) NRE cost can be defined by
 - a) The one time monetary cost of designing the system
 - b) Life time cost of system
 - c) Depends upon embedded system
 - d) None of above
- 2) In SPI slave select input used as
 - a) SPI device as slave when SS active
 - b) Clock must be synchronized
 - c) SPI device as master when SS active
 - d) None of above
- 3) In I2C high speed mode high speed is given as
 - a) 400 Kbps
 - b) 800 Kbps
 - c) 1600 Kbps
 - d) None of above
- 4) In embedded system, A cache provides
 - a) overall increase in performance
 - b) increase in execution time
 - c) through put decreases
 - d) none of above
- 5) AHB provides higher data through put than ASB because
 - a) It is based on bidirectional bus design
 - b) It is based on a centralized multiplexed bus scheme
 - c) It is based on unidirectional bus design
 - d) None of the above
- 6) Which of the following VIC having the highest priority ?
 - a) Vectored interrupt request
 - b) Non vectored interrupt request
 - c) Fast interrupt request
 - d) None of the above
- 7) Embedded system specific trends are
 - a) Amount of memory
 - b) Real time constraints
 - c) Design time
 - d) All of above

P.T.O.

- 8) LPC2148 has _____ on chip flash program memory.
a) 32 KB b) 64 KB c) 8 KB d) 512 KB
- 9) Total number of available ADC inputs for LPC 2148 is
a) 06 b) 08 c) 12 d) None of above
- 10) ARM 7 core has a Von Neumann-style architecture where
a) Data and instructions use same bus
b) Data and instructions use different bus
c) Core has five stage pipeline
d) None of the above
- 11) A thread is a _____ process.
a) multi process b) inter thread process
c) light weight d) none of above
- 12) What function are typically considered “operating system” ?
a) Memory Management b) Process scheduling
c) All management function d) User processes
- 13) Real time operating systems can be found in
a) PDAS b) Scientific instruments
c) Cell phones d) PDC
- 14) Inter process communication
a) is required for all processes b) is usually done via disk drivers
c) is never necessary d) all processes to synchronize activity
- 15) The initial value of semaphore that allows only one of the many processes to enter critical section is
a) 8 b) 1 c) 16 d) 0
- 16) Semaphore
a) Synchronise critical resources to prevent dead lock
b) Are used to do I/O
c) Are used for memory management
d) None of above
- 17) Round-robin scheduling
a) Allows interactive task quicker access to processor
b) Is quite complex to implement
c) Gives each task the same chance at the processor
d) None of the above
- 18) The FIFO algorithm
a) Execute first the job that last entered the queue
b) Execute first the job that first entered the queue
c) Execute first the job that has been in the queue the longest
d) None of above
- 19) Linux uses what mechanism to determine which process is run
a) CPU controlled multitasking b) Co-operating multitasking
c) Pre-emptive multitasking d) None of above
- 20) PCB =
a) Programming Control Block b) Program Control Block
c) Process Communication Block d) None of above
-

**B.E. (E&TC) (Part – II) (Old) Examination, 2016
EMBEDDED SYSTEMS**

Day and Date : Wednesday, 23-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

Instructions : 1) Assume suitable data **if required**.
2) Figure to **right** indicate **full** marks.

SECTION – I

2. Solve **any four** questions : **(5×4=20)**

- 1) Explain embedded system design challenges.
- 2) Explain recent trends in embedded system.
- 3) Explain the concept of RTC in LPC2148.
- 4) Explain the concept of watchdog timer for LPC2148.
- 5) Explain concept of three stage pipe line of ARM 7 processor.
- 6) Explain Bus architecture in ARM 7.

3. Solve **any two** questions : **(10×2=20)**

- 1) Draw and explain with block diagram architecture of LPC 2148.
- 2) What do you mean by design metric ? Explain the following design metrics.
 - i) Power
 - ii) Time to market
 - iii) Safety
 - iv) NRE cost
- 3) Draw the block diagram interfacing of graphics LCD with ARM processor. Explain in details.

Set P

SECTION – II

4. Solve **any four** questions :

(5×4=20)

- 1) Explain features of RTOS.
- 2) Explain concept of semaphore with example.
- 3) Difference between micro kernel and monolithic kernel architecture.
- 4) Explain thread vs processes.
- 5) Linux file system.

5. Solve **any two** questions :

(10×2=20)

- 1) Explain the concepts of mailbox in IPC. What are the function associated of mailbox in micro cos II ? Explain in details with associated diagram.
 - 2) What are the states of Task ? Draw and explain the characteristics of each task state. Explain with diagram task control block.
 - 3) Explain the concept of multithreading using p threads. Explain syslog and strace debug technique used in linux.
-

Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.

2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct alternatives :

(20×1=20)

- 1) Hop by hop error and flow control is present in
 - a) Frame relay
 - b) Packet switching
 - c) Cell relay
 - d) None
- 2) Which of the following is faster but unreliable protocol ?
 - a) Frame relay
 - b) Packet switching
 - c) Circuit switching
 - d) Frame switching
- 3) X.25 is standard for
 - a) Frame relay
 - b) Packet switching
 - c) Cell relay
 - d) None
- 4) ISDN relies on standard voice data rate of
 - a) 192 Kbps
 - b) 64 Kbps
 - c) 1.5 Mbps
 - d) 2 Mbps
- 5) ISDN uses _____ multiplexing and modulation scheme.
 - a) TDM-PCM
 - b) FDM-AM
 - c) TDM-AM
 - d) FDM-PCM
- 6) ISDN uses
 - a) Inband signaling
 - b) Outband signaling
 - c) Common channel signaling
 - d) None
- 7) Modulation-demodulation is required at every hop of a network using
 - a) Bridge
 - b) Analog switch
 - c) Digital switch
 - d) Circuit switch

P.T.O.

- 8) Maximum capacity with basic access of ISDN is
a) 192 Kbps b) 64 Kbps c) 1.5 Mbps d) 2 Mbps
- 9) The main data channel for ordinary ISDN user is
a) B channel b) D channel c) H channel d) H0 channel
- 10) Primary access means
a) 23 B + 2 D b) 23 B + 1D c) 2B + D d) B + D
- 11) B-ISDN uses _____ as PDU.
a) Frame b) Packet c) Cell d) None
- 12) B-ISDN uses _____ coding.
a) NRZ b) RZ c) CMI d) None
- 13) Broadcast TV channel is an example of _____ service.
a) Interactive b) Distribution c) Conversational d) Messaging
- 14) Virtual path is made up of virtual
a) Circuits b) Channels c) Cells d) Connections
- 15) ATM cell is made up of
a) 48 bytes b) 53 bytes c) 64 bytes d) 5 bytes
- 16) AAL type 1 means
a) Connection oriented, constant bit rate
b) Connection oriented, variable bit rate
c) Connectionless, constant bit rate
d) Connectionless, variable bit rate
- 17) ATM cells are routed using _____ field inside ATM cell.
a) GFC b) HEC c) VPI-VCI d) Payload type
- 18) GFC is required at _____ interface.
a) Network to network b) User to network
c) User to user d) Network to user
- 19) Maximum number of buffers are required in case of
a) Input buffers b) Output buffers
c) Crosspoint buffers d) None
- 20) Output lines are less than input lines in case of _____ ATM network.
a) Funnel type b) Shuffle exchange
c) Extended matrix d) None

**B.E. (Electronics and Telecommunication Engineering) Part – II (New)
Examination, 2016
BROADBAND COMMUNICATION**

Day and Date : Monday, 21-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

SECTION – I

2. Attempt **any four** : **(4×5=20)**
- a) Explain packet switching along with datagram and virtual circuit approach.
 - b) Write principles of ISDN.
 - c) Draw ISDN connections on B and D channel.
 - d) Draw and explain ISDN protocol architecture.
 - e) Explain various channels used in ISDN.
3. Attempt **any two** : **(2×10=20)**
- a) Along with proper diagram discuss I-series of recommendations.
 - b) Explain user interface to ISDN.
 - c) Explain with suitable figures data flow in case of packet switching and frame relay.

SECTION – II

4. Attempt **any four** : **(4×5=20)**
- a) Explain various interactive broadband services.
 - b) Explain architecture of B-ISDN.
 - c) Write a note on AAL services and protocols.
 - d) Explain what are Virtual Paths (VP) and Virtual Channels (VC).
 - e) Explain matrix type ATM switching element.
5. Attempt **any two** : **(2×10=20)**
- a) Explain in detail SONET system hierarchy.
 - b) Explain along with flow chart call establishment using virtual paths.
 - c) Compare output buffering with central buffering. Justify which one will be preferred.

Q

B.E. (Electronics and Telecommunication Engineering) Part – II (New)
Examination, 2016
BROADBAND COMMUNICATION

Day and Date : Monday, 21-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.

2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct alternatives :

(20×1=20)

- 1) AAL type 1 means
 - a) Connection oriented, constant bit rate
 - b) Connection oriented, variable bit rate
 - c) Connectionless, constant bit rate
 - d) Connectionless, variable bit rate
- 2) ATM cells are routed using _____ field inside ATM cell.
 - a) GFC
 - b) HEC
 - c) VPI-VCI
 - d) Payload type
- 3) GFC is required at _____ interface.
 - a) Network to network
 - b) User to network
 - c) User to user
 - d) Network to user
- 4) Maximum number of buffers are required in case of
 - a) Input buffers
 - b) Output buffers
 - c) Crosspoint buffers
 - d) None
- 5) Output lines are less than input lines in case of _____ ATM network.
 - a) Funnel type
 - b) Shuffle exchange
 - c) Extended matrix
 - d) None
- 6) Hop by hop error and flow control is present in
 - a) Frame relay
 - b) Packet switching
 - c) Cell relay
 - d) None

P.T.O.

- 7) Which of the following is faster but unreliable protocol ?
 - a) Frame relay
 - b) Packet switching
 - c) Circuit switching
 - d) Frame switching
- 8) X.25 is standard for
 - a) Frame relay
 - b) Packet switching
 - c) Cell relay
 - d) None
- 9) ISDN relies on standard voice data rate of
 - a) 192 Kbps
 - b) 64 Kbps
 - c) 1.5 Mbps
 - d) 2 Mbps
- 10) ISDN uses _____ multiplexing and modulation scheme.
 - a) TDM-PCM
 - b) FDM-AM
 - c) TDM-AM
 - d) FDM-PCM
- 11) ISDN uses
 - a) Inband signaling
 - b) Outband signaling
 - c) Common channel signaling
 - d) None
- 12) Modulation-demodulation is required at every hop of a network using
 - a) Bridge
 - b) Analog switch
 - c) Digital switch
 - d) Circuit switch
- 13) Maximum capacity with basic access of ISDN is
 - a) 192 Kbps
 - b) 64 Kbps
 - c) 1.5 Mbps
 - d) 2 Mbps
- 14) The main data channel for ordinary ISDN user is
 - a) B channel
 - b) D channel
 - c) H channel
 - d) H0 channel
- 15) Primary access means
 - a) 23 B + 2 D
 - b) 23 B + 1 D
 - c) 2B + D
 - d) B + D
- 16) B-ISDN uses _____ as PDU.
 - a) Frame
 - b) Packet
 - c) Cell
 - d) None
- 17) B-ISDN uses _____ coding.
 - a) NRZ
 - b) RZ
 - c) CMI
 - d) None
- 18) Broadcast TV channel is an example of _____ service.
 - a) Interactive
 - b) Distribution
 - c) Conversational
 - d) Messaging
- 19) Virtual path is made up of virtual
 - a) Circuits
 - b) Channels
 - c) Cells
 - d) Connections
- 20) ATM cell is made up of
 - a) 48 bytes
 - b) 53 bytes
 - c) 64 bytes
 - d) 5 bytes

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) Compact disc surface doesn't wear out because the sensor is
 - a) Electric
 - b) Magnetic
 - c) Mechanical
 - d) Optical
- 2) From where is the laser beam not reflected in video disc ?
 - a) From a flat
 - b) From a pit
 - c) From a land
 - d) From a glass
- 3) What is the number of fields per second in India ?
 - a) 25
 - b) 50
 - c) 625
 - d) 15625
- 4) Chroma signal requires _____ detector in receiver.
 - a) Envelope
 - b) Balanced
 - c) Ratio
 - d) Foster selley discriminator
- 5) _____ is not used in T.V. Receiver
 - a) Cathode ray tube
 - b) Loudspeaker
 - c) Photosensitive semiconductor
 - d) Integrated circuit
- 6) Radiation resistance of half wave dipole is _____ ohm.
 - a) 100
 - b) 73
 - c) 36.5
 - d) 300
- 7) The following is not an F.M. detector
 - a) PLL detector
 - b) Phase shift discriminator
 - c) Ratio Detector
 - d) Envelope detector

P.T.O.

- 8) Horizontal trace is scanning takes _____ microseconds.
a) 52 b) 60 c) 63.5 d) 64
- 9) Which of the following working is like working of disc recording unit ?
a) Motor b) Dynamo c) Microphone d) Generator
- 10) The value of kell factor is about
a) 0.3 b) 0.5 c) 0.7 d) 0.9
- 11) Moving Picture Experts Group (MPEG) is used to compress
a) Frames b) Images c) Audio d) Video
- 12) A combination of encryption algorithm and a decryption algorithm is called a
a) plain text b) cipher c) original text d) shift cipher
- 13) The most common compression technique that is used to create CD-quality audio is based on perceptual encoding technique is called
a) Predictive Encoding b) Perceptual Encoding
c) MPEG d) JPEG
- 14) Audio and Video compression, each frame is divided into small grids, called picture elements or
a) Frame b) Packets c) Pixels d) Mega pixels
- 15) _____ is a standard to allow telephones on the public telephone network to talk to computers connected to the Internet.
a) SIP b) H.323
c) Q.991 d) None of the above
- 16) When there is more than one source, the _____ identifier defines the mixer.
a) Synchronization source b) Contributor
c) Time stamp d) None of the above
- 17) _____ is the protocol designed to handle real time traffic on the Internet.
a) TCP b) UDP c) RTP d) None of the above
- 18) The real time video conference, data from the server is _____ to the client sites.
a) unicast b) multicast c) broadcast d) none of the above
- 19) Real time traffic needs the support of
a) broadcasting b) multicasting c) both a) and b) d) none of the above
- 20) _____ means combining several streams of traffic into one stream.
a) Translation b) Mixing c) Both a) and b) d) None of the above

Day and Date : Tuesday, 22-11-2016

Marks : 80

Time : 3.00 p.m. to 6.00 p.m.

Instructions : 1) **All questions are compulsory.**
2) **Figure to *right* indicate *full* marks.**

SECTION – I

2. Attempt **any four**. **(5×4 =20)**

- 1) Explain the term Kell factor and aspect ratio.
- 2) What is interlaced scanning ? What are its advantages ?
- 3) With block diagram explain working of disc reproduction system.
- 4) Explain block diagram of RF tuner section.
- 5) Explain HDTV.

3. Attempt **any two** : **(10×2 =20)**

- 1) Draw a block diagram of an NTSC Colour T.V. Transmitter and describe each block.
- 2) What do you understand by compatibility in T.V. systems ? What conditions must be fulfilled for sake of compatibility ?
- 3) Explain how sound is reproduced from C.D.

Set P

SECTION – II

4. Attempt **any four**. **(5×4 =20)**

- 1) What are types of multipoint conferencing ? Explain any one type in brief.
- 2) Explain PCM speech technique.
- 3) Explain Broadcast T.V.
- 4) What are audio applications of multimedia ?
- 5) Define multimedia and explain elements of multimedia.

5. Attempt **any two** : **(10×2 =20)**

- 1) Explain Telephone network in detail.
 - 2) What are different video compression techniques ? Compare between them.
 - 3) Explain entertainment applications of multimedia.

- 1) Explain the term Kell factor and aspect ratio.
- 2) What is interlaced scanning ? What are its advantages ?
- 3) With block diagram explain working of disc reproduction system.
- 4) Explain block diagram of RF tuner section.
- 5) Explain HDTV.

3. Attempt **any two** : **(10×2 =20)**

- 1) Draw a block diagram of an NTSC Colour T.V. Transmitter and describe each block.
- 2) What do you understand by compatibility in T.V. systems ? What conditions must be fulfilled for sake of compatibility ?
- 3) Explain how sound is reproduced from C.D.

Set Q

SECTION – II

4. Attempt **any four**. **(5×4 =20)**

- 1) What are types of multipoint conferencing ? Explain any one type in brief.
- 2) Explain PCM speech technique.
- 3) Explain Broadcast T.V.
- 4) What are audio applications of multimedia ?
- 5) Define multimedia and explain elements of multimedia.

5. Attempt **any two** : **(10×2 =20)**

- 1) Explain Telephone network in detail.
 - 2) What are different video compression techniques ? Compare between them.
 - 3) Explain entertainment applications of multimedia.
-

**B.E. (Electronics and Telecommunication Engineering) (Part – II) (New)
Examination, 2016
MULTIMEDIA COMMUNICATION TECHNIQUES**

Day and Date : Tuesday, 22-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

- Instructions :**
- 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - 2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
 - 3) **All questions are compulsory.**
 - 4) Figure to **right** indicate **full** marks.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) Moving Picture Experts Group (MPEG) is used to compress
 - a) Frames
 - b) Images
 - c) Audio
 - d) Video
- 2) A combination of encryption algorithm and a decryption algorithm is called a
 - a) plain text
 - b) cipher
 - c) original text
 - d) shift cipher
- 3) The most common compression technique that is used to create CD-quality audio is based on perceptual encoding technique is called
 - a) Predictive Encoding
 - b) Perceptual Encoding
 - c) MPEG
 - d) JPEG
- 4) Audio and Video compression, each frame is divided into small grids, called picture elements or
 - a) Frame
 - b) Packets
 - c) Pixels
 - d) Mega pixels
- 5) _____ is a standard to allow telephones on the public telephone network to talk to computers connected to the Internet.
 - a) SIP
 - b) H.323
 - c) Q.991
 - d) None of the above
- 6) When there is more than one source, the _____ identifier defines the mixer.
 - a) Synchronization source
 - b) Contributor
 - c) Time stamp
 - d) None of the above

P.T.O.

- 7) _____ is the protocol designed to handle real time traffic on the Internet.
a) TCP b) UDP c) RTP d) None of the above
- 8) The real time video conference, data from the server is _____ to the client sites.
a) unicast b) multicast c) broadcast d) none of the above
- 9) Real time traffic needs the support of
a) broadcasting b) multicasting c) both a) and b) d) none of the above
- 10) _____ means combining several streams of traffic into one stream.
a) Translation b) Mixing c) Both a) and b) d) None of the above
- 11) Compact disc surface doesn't wear out because the sensor is
a) Electric b) Magnetic c) Mechanical d) Optical
- 12) From where is the laser beam not reflected in video disc ?
a) From a flat b) From a pit
c) From a land d) From a glass
- 13) What is the number of fields per second in India ?
a) 25 b) 50 c) 625 d) 15625
- 14) Chroma signal requires _____ detector in receiver.
a) Envelope b) Balanced
c) Ratio d) Foster selley discriminator
- 15) _____ is not used in T.V. Receiver
a) Cathode ray tube b) Loudspeaker
c) Photosensitive semiconductor d) Integrated circuit
- 16) Radiation resistance of half wave dipole is _____ ohm.
a) 100 b) 73 c) 36.5 d) 300
- 17) The following is not an F.M. detector
a) PLL detector b) Phase shift discriminator
c) Ratio Detector d) Envelope detector
- 18) Horizontal trace is scanning takes _____ microseconds.
a) 52 b) 60 c) 63.5 d) 64
- 19) Which of the following working is like working of disc recording unit ?
a) Motor b) Dynamo c) Microphone d) Generator
- 20) The value of kell factor is about
a) 0.3 b) 0.5 c) 0.7 d) 0.9

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct alternative :

(20×1=20)

SECTION – I

- 1) Philips ARM MCU LPC21xx has
 - a) 60 MHz operation, 0.18 –mm CMOS embedded fast flash
 - b) 48 MHz operation, 0.18 –mm CMOS embedded fast flash
 - c) 60 MHz operation, 0.13 –mm CMOS embedded fast flash
 - d) 60 MHz operation, 0.13 – mm but no embedded fast flash
- 2) Using USB up to _____ devices may be connected to a single host controller.
 - a) 2
 - b) 64
 - c) 127
 - d) 256
- 3) Condition test for
 - a) GT (greater than) means N and Z = 0
 - b) GT (greater than) means V and Z = 0
 - c) GT (greater than) means N= V and Z = 0
 - d) GT (greater than) means Z = 0
- 4) In case of LPC2148, all PWM output will occurs at
 - a) Same repetition rate
 - b) Different repetition rate
 - c) Depends upon design
 - d) None of above
- 5) _____ mode is a special version of user mode that allows full read-write access to the cpsr.
 - a) Supervisor
 - b) System
 - c) Undefined
 - d) Abort
- 6) The ARM register _____ is called link register.
 - a) R 12
 - b) R 13
 - c) R 14
 - d) R 15
- 7) In ARM _____ exception is having highest priority.
 - a) Reset
 - b) Supervisor
 - c) System
 - d) Interrupt Request
- 8) If External frequency = 12 MHz, CCLK= 48 MHz and PCLK = 24 MHz then PLLCFG and VPBDIV values are
 - a) 0 × 23 and 0 × 01
 - b) 0 × 23 and 0 × 00
 - c) 0 × 23 and 0 × 02
 - d) 0 × 22 and 0 × 00

P.T.O.

- 9) On interrupt, processor does the following
a) Copies CPSR to SPSR mode b) Copies SPSR to CPSR mode
c) Copies PC to R12 mode d) None of above
- 10) $r2 = 0 \times 0000\ 0002$, $r4 = 0 \times 0000\ 0001$
LSL r2, r4 results
a) $r2 = 0 \times 0000\ 0004$, $r4 = 0 \times 0000\ 0001$ b) $r2 = 0 \times 0000\ 0004$, $r4 = 0 \times 0000\ 0002$
c) $r2 = 0 \times 0000\ 0001$, $r2 = 0 \times 0000\ 0002$ d) None of above

SECTION – II

- 11) Scheduling is
a) Allowing jobs to use the processor
b) Un related to performance consideration
c) The same regardless of purpose of system
d) None of the above
- 12) Memory management is
a) not used in modern operating system
b) replaced with virtual memory on current systems
c) not used in multiprogramming system
d) none of above
- 13) Process is
a) Program in high level language kept on disk
b) Content of main memory
c) A program in execution
d) A job in secondary memory
- 14) Which of the following option is not true ?
a) A signal is boolean notification
b) A signal and semaphore are of one bit each
c) A signal and mutex are of one bit each
d) A signal, a semaphore and a message are of one bit each
- 15) Medical devices often run a _____ operating system.
a) Real time b) Single user
c) Multi user d) Network
- 16) Event flags are used when
a) Task need to synchronise with the occurrence of multiple events
b) Task need to synchronise with the occurrence of two events
c) Interprocess communication required
d) None of above
- 17) Real time operating systems can be found in
a) PDAS b) Scientific instruments
c) Cell phones d) PDC
- 18) Round-robin scheduling
a) Allows interactive task quicker access to processor
b) Is quite complex to implement
c) Gives each task the same chance at the processor
d) None of the above
- 19) Inter task communication can be done through
a) Mailbox b) Queue c) Pipes d) All of above
- 20) Semaphore
a) Synchronise critical resources to prevent dead lock
b) Are used to do I/O
c) Are used for memory management
d) None of above

EMBEDDED SYSTEMS**

Day and Date : Wednesday, 23-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

- Instructions :**
- 1) Assume suitable data if **required**.
 - 2) Figure to **right** indicate **full** marks.

SECTION – I

2. Solve **any four** questions. **(5×4 =20)**

- 1) Explain recent trends in embedded system.
- 2) Explain the controller area network.
- 3) Explain the features of LPC2148.
- 4) Explain communication protocol I2C bus.
- 5) Explain the concept of PLL in LPC2148.

3. Solve **any two** questions. **(10×2 =20)**

- 1) Explain exceptions, interrupt and vector table for ARM processor. What is TCM ?
- 2) Describe operation with example of following ARM instructions.
 - a) LDRB
 - b) CMN
 - c) LSL
 - d) MLA
 - e) BX
- 3) Draw and explain the data flow model of ARM core.

Set P

SECTION – II

4. Solve **any four** questions. **(5×4 =20)**
- 1) Explain application of RTOS.
 - 2) Explain Kernel Services in an Operating System (RTOS).
 - 3) Explain Kernel structure of μ cos II RTOS.
 - 4) Draw and explain the block diagram of Mobile Phone.
 - 5) Draw and explain block diagram of interfacing LED with ARM processor with program.
5. Solve **any two** questions. **(10×2 =20)**
- 1) Explain the following Kernel objects in RTOS.
 - a) Semaphore
 - b) Message Queue
 - 2) What are the states of Task ? Draw and explain the characteristics of each task state. Explain with diagram task control block.
 - 3) Draw interfacing diagram of 16×2 LCD with LPC2148. Write an embedded C program to display “ Embedded Systems” message on 16×2 LCD.
-

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct alternative :

(20×1=20)

SECTION – I

- 1) _____ mode is a special version of user mode that allows full read-write access to the cpsr.
a) Supervisor b) System c) Undefined d) Abort
- 2) The ARM register _____ is called link register.
a) R 12 b) R 13 c) R 14 d) R 15
- 3) Philips ARM MCU LPC21xx has
a) 60 MHz operation, 0.18 –mm CMOS embedded fast flash
b) 48 MHz operation, 0.18 –mm CMOS embedded fast flash
c) 60 MHz operation, 0.13 –mm CMOS embedded fast flash
d) 60 MHz operation, 0.13 – mm but no embedded fast flash
- 4) Using USB up to _____ devices may be connected to a single host controller.
a) 2 b) 64 c) 127 d) 256
- 5) In ARM _____ exception is having highest priority.
a) Reset b) Supervisor
c) System d) Interrupt Request
- 6) If External frequency = 12 MHz, CCLK= 48 MHz and PCLK = 24 MHz then PLLCFG and VPBDIV values are
a) 0 × 23 and 0 × 01 b) 0 × 23 and 0 × 00
c) 0 × 23 and 0 × 02 d) 0 × 22 and 0 × 00
- 7) On interrupt, processor does the following
a) Copies CPSR to SPSR mode b) Copies SPSR to CPSR mode
c) Copies PC to R12 mode d) None of above
- 8) r2 = 0 × 0000 0002, r4 = 0 × 0000 0001
LSL r2, r4 results
a) r2 = 0 × 0000 0004, r4 = 0 × 0000 0001 b) r2 = 0 × 0000 0004, r4 = 0 × 0000 0002
c) r2 = 0 × 0000 0001, r2 = 0 × 0000 0002 d) None of above

P.T.O.

- 9) Condition test for
- a) GT (greater than) means N and $Z = 0$
 - b) GT (greater than) means V and $Z = 0$
 - c) GT (greater than) means $N = V$ and $Z = 0$
 - d) GT (greater than) means $Z = 0$
- 10) In case of LPC2148, all PWM output will occurs at
- a) Same repetition rate
 - b) Different repetition rate
 - c) Depends upon design
 - d) None of above

SECTION – II

- 11) Medical devices often run a _____ operating system.
- a) Real time
 - b) Single user
 - c) Multi user
 - d) Network
- 12) Event flags are used when
- a) Task need to synchronise with the occurrence of multiple events
 - b) Task need to synchronise with the occurrence of two events
 - c) Interprocess communication required
 - d) None of above
- 13) Scheduling is
- a) Allowing jobs to use the processor
 - b) Unrelated to performance consideration
 - c) The same regardless of purpose of system
 - d) None of the above
- 14) Memory management is
- a) not used in modern operating system
 - b) replaced with virtual memory on current systems
 - c) not used in multiprogramming system
 - d) none of above
- 15) Real time operating systems can be found in
- a) PDAS
 - b) Scientific instruments
 - c) Cell phones
 - d) PDC
- 16) Round-robin scheduling
- a) Allows interactive task quicker access to processor
 - b) Is quite complex to implement
 - c) Gives each task the same chance at the processor
 - d) None of the above
- 17) Inter task communication can be done through
- a) Mailbox
 - b) Queue
 - c) Pipes
 - d) All of above
- 18) Semaphore
- a) Synchronise critical resources to prevent dead lock
 - b) Are used to do I/O
 - c) Are used for memory management
 - d) None of above
- 19) Process is
- a) Program in high level language kept on disk
 - b) Content of main memory
 - c) A program in execution
 - d) A job in secondary memory
- 20) Which of the following option is not true ?
- a) A signal is boolean notification
 - b) A signal and semaphore are of one bit each
 - c) A signal and mutex are of one bit each
 - d) A signal, a semaphore and a message are of one bit each

Seat No.	
---------------------	--

**B.E. (E & TC) (Part – II) (New) Examination, 2016
EMBEDDED SYSTEMS**

Day and Date : Wednesday, 23-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

- Instructions :**
- 1) Assume suitable data if **required**.
 - 2) Figure to **right** indicate **full** marks.

SECTION – I

2. Solve **any four** questions. **(5×4 =20)**

- 1) Explain recent trends in embedded system.
- 2) Explain the controller area network.
- 3) Explain the features of LPC2148.
- 4) Explain communication protocol I2C bus.
- 5) Explain the concept of PLL in LPC2148.

3. Solve **any two** questions. **(10×2 =20)**

- 1) Explain exceptions, interrupt and vector table for ARM processor. What is TCM ?
- 2) Describe operation with example of following ARM instructions.
 - a) LDRB
 - b) CMN
 - c) LSL
 - d) MLA
 - e) BX
- 3) Draw and explain the data flow model of ARM core.

Set R

SECTION – II

4. Solve **any four** questions. **(5×4 =20)**
- 1) Explain application of RTOS.
 - 2) Explain Kernel Services in an Operating System (RTOS).
 - 3) Explain Kernel structure of μ cos II RTOS.
 - 4) Draw and explain the block diagram of Mobile Phone.
 - 5) Draw and explain block diagram of interfacing LED with ARM processor with program.
5. Solve **any two** questions. **(10×2 =20)**
- 1) Explain the following Kernel objects in RTOS.
 - a) Semaphore
 - b) Message Queue
 - 2) What are the states of Task ? Draw and explain the characteristics of each task state. Explain with diagram task control block.
 - 3) Draw interfacing diagram of 16×2 LCD with LPC2148. Write an embedded C program to display “ Embedded Systems” message on 16×2 LCD.
-

B.E. (E & TC) (Part – II) (New) Examination, 2016
EMBEDDED SYSTEMS

Day and Date : Wednesday, 23-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Total Marks : 100

- Instructions :**
- 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - 2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
 - 3) Assume suitable data if **required**.
 - 4) Figure to **right** indicate **full** marks.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct alternative :

(20×1=20)

SECTION – I

- 1) Condition test for
 - a) GT (greater than) means N and $Z = 0$
 - b) GT (greater than) means V and $Z = 0$
 - c) GT (greater than) means $N = V$ and $Z = 0$
 - d) GT (greater than) means $Z = 0$
- 2) In case of LPC2148, all PWM output will occurs at
 - a) Same repetition rate
 - b) Different repetition rate
 - c) Depends upon design
 - d) None of above
- 3) In ARM _____ exception is having highest priority.
 - a) Reset
 - b) Supervisor
 - c) System
 - d) Interrupt Request
- 4) If External frequency = 12 MHz, CCLK= 48 MHz and PCLK = 24 MHz then PLLCFG and VPBDIV values are
 - a) 0×23 and 0×01
 - b) 0×23 and 0×00
 - c) 0×23 and 0×02
 - d) 0×22 and 0×00
- 5) On interrupt, processor does the following
 - a) Copies CPSR to SPSR mode
 - b) Copies SPSR to CPSR mode
 - c) Copies PC to R12 mode
 - d) None of above
- 6) $r2 = 0 \times 0000\ 0002$, $r4 = 0 \times 0000\ 0001$
LSL $r2$, $r4$ results
 - a) $r2 = 0 \times 0000\ 0004$, $r4 = 0 \times 0000\ 0001$
 - b) $r2 = 0 \times 0000\ 0004$, $r4 = 0 \times 0000\ 0002$
 - c) $r2 = 0 \times 0000\ 0001$, $r2 = 0 \times 0000\ 0002$
 - d) None of above
- 7) Philips ARM MCU LPC21xx has
 - a) 60 MHz operation, 0.18 –mm CMOS embedded fast flash
 - b) 48 MHz operation, 0.18 –mm CMOS embedded fast flash
 - c) 60 MHz operation, 0.13 –mm CMOS embedded fast flash
 - d) 60 MHz operation, 0.13 – mm but no embedded fast flash

P.T.O.

- 8) Using USB up to _____ devices may be connected to a single host controller.
a) 2 b) 64 c) 127 d) 256
- 9) _____ mode is a special version of user mode that allows full read-write access to the cpsr.
a) Supervisor b) System c) Undefined d) Abort
- 10) The ARM register _____ is called link register.
a) R 12 b) R 13 c) R 14 d) R 15

SECTION – II

- 11) Process is
a) Program in high level language kept on disk
b) Content of main memory
c) A program in execution
d) A job in secondary memory
- 12) Which of the following option is not true ?
a) A signal is boolean notification
b) A signal and semaphore are of one bit each
c) A signal and mutex are of one bit each
d) A signal, a semaphore and a message are of one bit each
- 13) Real time operating systems can be found in
a) PDAS b) Scientific instruments
c) Cell phones d) PDC
- 14) Round-robin scheduling
a) Allows interactive task quicker access to processor
b) Is quite complex to implement
c) Gives each task the same chance at the processor
d) None of the above
- 15) Inter task communication can be done through
a) Mailbox b) Queue c) Pipes d) All of above
- 16) Semaphore
a) Synchronise critical resources to prevent dead lock
b) Are used to do I/O
c) Are used for memory management
d) None of above
- 17) Scheduling is
a) Allowing jobs to use the processor
b) Unrelated to performance consideration
c) The same regardless of purpose of system
d) None of the above
- 18) Memory management is
a) not used in modern operating system
b) replaced with virtual memory on current systems
c) not used in multiprogramming system
d) none of above
- 19) Medical devices often run a _____ operating system.
a) Real time b) Single user c) Multi user d) Network
- 20) Event flags are used when
a) Task need to synchronise with the occurrence of multiple events
b) Task need to synchronise with the occurrence of two events
c) Interprocess communication required
d) None of above

Day and Date : Thursday, 8-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

Instructions : 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Select an appropriate option :

(20×1=20)

- 1) WMAN corresponds to
 - a) IEEE 802.11
 - b) IEEE 802.15
 - c) IEEE 802.16
 - d) None of the above
- 2) IEEE 802.16 operates over _____ frequency spectrum.
 - a) 10 to 66 GHz
 - b) 10 to 66 MHz
 - c) 10 to 66 KHz
 - d) None of the above
- 3) GFSK and FHSS modulation schemes are used in IEEE
 - a) 802.15.1
 - b) 802.15.3
 - c) 802.15.4
 - d) None of the above
- 4) Bluetooth operates over _____ frequency band.
 - a) 2.4 GHz
 - b) 2.4 MHz
 - c) 2.4 KHz
 - d) None of the above
- 5) SONET stands for
 - a) Synchronous Optical Network
 - b) Synchronous Original Network
 - c) Asynchronous Optical Network
 - d) None of the above
- 6) LTE stands for
 - a) Long Term Evolution
 - b) Large Term Evolution
 - c) Long Term Expiry
 - d) Large term Expiry
- 7) _____ is a standard developed by ANSI for fiber optic networks.
 - a) SONET
 - b) SDH
 - c) Either (a) or (b)
 - d) Neither (a) nor (b)
- 8) SDH has defined hierarchy of signals called
 - a) STSs
 - b) STMs
 - c) Either (a) or (b)
 - d) Neither (a) nor (b)

P.T.O.

- 9) SONET defines _____ layers.
a) Two b) Three c) Four d) Five
- 10) SONET network topologies can be
a) Linear b) Ring c) Mesh d) All of the above
- 11) _____ is to determine spectrum availability and the presence of licensed users.
a) Spectrum sensing b) Spectrum sharing
c) Spectrum mobility d) None of the above
- 12) _____ is to distribute the spectrum holes fairly among the secondary users bearing in mind usage cost.
a) Spectrum sensing b) Spectrum sharing
c) Spectrum mobility d) None of the above
- 13) _____ is to maintain seamless communication requirements during the transition to better spectrum.
a) Spectrum sensing b) Spectrum sharing
c) Spectrum mobility d) None of the above
- 14) Cognitive cycle consists of
a) Spectrum sharing b) Spectrum sensing
c) Spectrum mobility d) All of the above
- 15) In _____ communication, independent paths between user and base station are generated via introduction of relay channel.
a) Cooperative b) Correlative c) Congestive d) None of the above
- 16) In _____ relaying, if signal to noise ratio of signal received at the relay exceeds a certain threshold, relay performs decode and forward operation on the message.
a) Fixed b) Adaptive c) Both (a) and (b) d) None of the above
- 17) MIMO stands for
a) Multiple Input Multiple Output b) Multiple Output Multiple Input
c) Multiple Instructions Multiple Output d) Memory In Memory Out
- 18) CR stands for
a) Cognitive Radio b) Cognizent Radio
c) Correlative Radio d) None of the above
- 19) _____ can be used for tele-healthcare.
a) Cognitive Radio b) Cooperative Communications
c) Both (a) and (b) d) None of the above
- 20) ITU stands for
a) International Telecommunication Union
b) International Territory Union
c) Indian Telecommunication Union
d) Indian Territory Union

Day and Date : Thursday, 8-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

2. Solve **any four** : **20**
- a) Compare WLAN standards namely IEEE 802.11, IEEE 802.11b, IEEE 802.11a and IEEE 802.11g.
 - b) What features are provided in IEEE 802.11 for robustness in data transmission ?
 - c) Explain the concept of fixed mobile convergence in NGN.
 - d) Write a note on Wimax advanced.
 - e) Explain Metro optical networking.
3. Solve **any two** : **20**
- a) What do you mean by WMAN ? Explain its typical features and enumerate important physical layer parameters of IEEE 802.16.
 - b) Draw and explain the architecture of IP and MPLS based optical transport network.
 - c) Explain transition of IP network to NGN.
4. Solve **any four** : **20**
- a) Explain the conceptual structure of cooperative communication.
 - b) Mention the benefits and drawbacks of cooperative communication.
 - c) Draw the architecture of cognitive radio network.
 - d) What the special requirements of telehealthcare ?
 - e) Discuss the applications of cooperative communication.
5. Solve **any two** : **20**
- a) Discuss cooperative communication enabled MIMO and smart antenna concept.
 - b) Explain the structuring knowledge for cognition tasks.
 - c) Explain how cooperative communication is used for telehealthcare.

Max. Marks : 100

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Marks : 20

(20×1=20)

- 1) _____ is to determine spectrum availability and the presence of licensed users.
a) Spectrum sensing b) Spectrum sharing
c) Spectrum mobility d) None of the above
- 2) _____ is to distribute the spectrum holes fairly among the secondary users bearing in mind usage cost.
a) Spectrum sensing b) Spectrum sharing
c) Spectrum mobility d) None of the above
- 3) _____ is to maintain seamless communication requirements during the transition to better spectrum.
a) Spectrum sensing b) Spectrum sharing
c) Spectrum mobility d) None of the above
- 4) Cognitive cycle consists of
a) Spectrum sharing b) Spectrum sensing
c) Spectrum mobility d) All of the above
- 5) In _____ communication, independent paths between user and base station are generated via introduction of relay channel.
a) Cooperative b) Correlative c) Congestive d) None of the above
- 6) In _____ relaying, if signal to noise ratio of signal received at the relay exceeds a certain threshold, relay performs decode and forward operation on the message.
a) Fixed b) Adaptive c) Both (a) and (b) d) None of the above
- 7) MIMO stands for
a) Multiple Input Multiple Output b) Multiple Output Multiple Input
c) Multiple Instructions Multiple Output d) Memory In Memory Out

P.T.O.

- 8) CR stands for
a) Cognitive Radio
b) Cognizent Radio
c) Correlative Radio
d) None of the above
- 9) _____ can be used for tele-healthcare.
a) Cognitive Radio
b) Cooperative Communications
c) Both (a) and (b)
d) None of the above
- 10) ITU stands for
a) International Telecommunication Union
b) International Territory Union
c) Indian Telecommunication Union
d) Indian Territory Union
- 11) WMAN corresponds to
a) IEEE 802.11
b) IEEE 802.15
c) IEEE 802.16
d) None of the above
- 12) IEEE 802.16 operates over _____ frequency spectrum.
a) 10 to 66 GHz
b) 10 to 66 MHz
c) 10 to 66 KHz
d) None of the above

Day and Date : Thursday, 8-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

2. Solve **any four** : **20**
- a) Compare WLAN standards namely IEEE 802.11, IEEE 802.11b, IEEE 802.11a and IEEE 802.11g.
 - b) What features are provided in IEEE 802.11 for robustness in data transmission ?
 - c) Explain the concept of fixed mobile convergence in NGN.
 - d) Write a note on Wimax advanced.
 - e) Explain Metro optical networking.
3. Solve **any two** : **20**
- a) What do you mean by WMAN ? Explain its typical features and enumerate important physical layer parameters of IEEE 802.16.
 - b) Draw and explain the architecture of IP and MPLS based optical transport network.
 - c) Explain transition of IP network to NGN.
4. Solve **any four** : **20**
- a) Explain the conceptual structure of cooperative communication.
 - b) Mention the benefits and drawbacks of cooperative communication.
 - c) Draw the architecture of cognitive radio network.
 - d) What the special requirements of telehealthcare ?
 - e) Discuss the applications of cooperative communication.
5. Solve **any two** : **20**
- a) Discuss cooperative communication enabled MIMO and smart antenna concept.
 - b) Explain the structuring knowledge for cognition tasks.
 - c) Explain how cooperative communication is used for telehealthcare.

**B.E. (Part – I) (Electronics and Telecommunication)
Examination, 2016
ADVANCED TELECOMMUNICATION NETWORK
Elective – I**

Day and Date : Thursday, 8-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

Instructions : 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Select an appropriate option :

(20×1=20)

- 1) LTE stands for
 - a) Long Term Evolution
 - b) Large Term Evolution
 - c) Long Term Expiry
 - d) Large term Expiry
- 2) _____ is a standard developed by ANSI for fiber optic networks.
 - a) SONET
 - b) SDH
 - c) Either (a) or (b)
 - d) Neither (a) nor (b)
- 3) SDH has defined hierarchy of signals called
 - a) STSs
 - b) STMs
 - c) Either (a) or (b)
 - d) Neither (a) nor (b)
- 4) SONET defines _____ layers.
 - a) Two
 - b) Three
 - c) Four
 - d) Five
- 5) SONET network topologies can be
 - a) Linear
 - b) Ring
 - c) Mesh
 - d) All of the above
- 6) _____ is to determine spectrum availability and the presence of licensed users.
 - a) Spectrum sensing
 - b) Spectrum sharing
 - c) Spectrum mobility
 - d) None of the above
- 7) _____ is to distribute the spectrum holes fairly among the secondary users bearing in mind usage cost.
 - a) Spectrum sensing
 - b) Spectrum sharing
 - c) Spectrum mobility
 - d) None of the above
- 8) _____ is to maintain seamless communication requirements during the transition to better spectrum.
 - a) Spectrum sensing
 - b) Spectrum sharing
 - c) Spectrum mobility
 - d) None of the above

P.T.O.

- 9) Cognitive cycle consists of
 - a) Spectrum sharing
 - b) Spectrum sensing
 - c) Spectrum mobility
 - d) All of the above
- 10) In _____ communication, independent paths between user and base station are generated via introduction of relay channel.
 - a) Cooperative
 - b) Correlative
 - c) Congestive
 - d) None of the above
- 11) In _____ relaying, if signal to noise ratio of signal received at the relay exceeds a certain threshold, relay performs decode and forward operation on the message.
 - a) Fixed
 - b) Adaptive
 - c) Both (a) and (b)
 - d) None of the above
- 12) MIMO stands for
 - a) Multiple Input Multiple Output
 - b) Multiple Output Multiple Input
 - c) Multiple Instructions Multiple Output
 - d) Memory In Memory Out
- 13) CR stands for
 - a) Cognitive Radio
 - b) Cognizent Radio
 - c) Correlative Radio
 - d) None of the above
- 14) _____ can be used for tele-healthcare.
 - a) Cognitive Radio
 - b) Cooperative Communications
 - c) Both (a) and (b)
 - d) None of the above
- 15) ITU stands for
 - a) International Telecommunication Union
 - b) International Territory Union
 - c) Indian Telecommunication Union
 - d) Indian Territory Union
- 16) WMAN corresponds to
 - a) IEEE 802.11
 - b) IEEE 802.15
 - c) IEEE 802.16
 - d) None of the above
- 17) IEEE 802.16 operates over _____ frequency spectrum.
 - a) 10 to 66 GHz
 - b) 10 to 66 MHz
 - c) 10 to 66 KHz
 - d) None of the above
- 18) GFSK and FHSS modulation schemes are used in IEEE
 - a) 802.15.1
 - b) 802.15.3
 - c) 802.15.4
 - d) None of the above
- 19) Bluetooth operates over _____ frequency band.
 - a) 2.4 GHz
 - b) 2.4 MHz
 - c) 2.4 KHz
 - d) None of the above
- 20) SONET stands for
 - a) Synchronous Optical Network
 - b) Synchronous Original Network
 - c) Asynchronous Optical Network
 - d) None of the above

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer : **(1×20=20)**

- 1) The graph showing no. of occurrence of pixels of K^{th} gray level of an image is nothing but
a) Plot b) Histogram c) Probability d) Barchart
- 2) Images of higher contrast can be produced by darkening the gray levels below threshold and brightening the levels above threshold is called
a) Contrast stretching b) Contrast reduction
c) Restoration d) None
- 3) The watershed transform for image segmentation is executed on
a) The input image directly b) Gradient of input image
c) Input image after low pass filter d) Input image after contrast stretching
- 4) The transform which is recommended in Baseline JPEG standard is
a) Random b) DCT c) Walsh d) Wavelet
- 5) In general compression model the encoder block is _____ the channel block.
a) Before b) After c) Upside d) Downside
- 6) Entropy Coding is basically a
a) Lossless coding which exploits the psycho visual redundancy
b) Lossy coding which exploits the psycho visual redundancy
c) Lossless coding which exploits the statistical redundancy
d) Lossy coding which exploits the statistical redundancy
- 7) Currently image compression is recognized as an _____ technology.
a) Enabling b) Disabling c) Both d) None

P.T.O.

- 8) A biometrics may be
a) Fingerprint images b) Satellite images
c) Computer vision d) None
- 9) Information lost when expressed mathematically is called
a) Markow b) Finite memory source
c) Fidelity criteria d) Noiseless theorem
- 10) The chain code of a boundary depends on the _____ point.
a) Start b) End c) Middle d) Last
- 11) In lossless image compression the data reduction is acceptable in many applications, due to
a) Loss is desirable b) Not desirable
c) Both d) None
- 12) Digital images have edges that are
a) Blur b) Noisy c) Clear d) Both a) and b)
- 13) What algorithm is used in finger print technology ?
a) Intensity based algorithm b) Pattern based algorithm
c) Feature based algorithm d) Recognition algorithm
- 14) In RGB colour image each pixel resolution is
a) 8-bit b) 24-bit c) 16-bit d) 4-bit
- 15) The smallest descensible detail in an image is called
a) Spatial resolution b) Gray level resolution
c) Multi-resolution d) None
- 16) Image function is characterized by
a) Reflectance component b) Illumination component
c) Both a) and b) d) None
- 17) Digitizing the amplitude value of continuous image is called
a) Quantization b) Sensing the image
c) Acquisition d) Sampling
- 18) Statement 1 : A histogram gives the frequency of occurrence of the gray level
Statement 2 : A histogram is invariant to rotation
a) Statement 1 and 2 are wrong
b) Statement 1 is correct and 2 is wrong
c) Statement 1 and 2 are correct
d) Statement 2 is correct and 1 is wrong
- 19) Dilation followed by erosion operation leads to
a) Closing b) Opening c) Union d) Intersection
- 20) Which of the following filter will in general have the best performance in enhancing edge in an image ?
a) Mean filter b) Median filter c) Laplace filter d) Mode filter

IMAGE PROCESSING (Elective – I)

Day and Date : Thursday, 8-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

Instructions : 1) **All questions are compulsory.**
2) **Figures to the right indicate full marks.**

SECTION – I

2. Solve **any four** : **(4×5=20)**
- i) Explain image restoration Model.
 - ii) Explain RGB color Model.
 - iii) Explain smoothing filters.
 - iv) Explain image sampling and quantization.
 - v) Define histogram and explain histogram equalization.
3. i) Explain different type of image acquisition sensors and their parameters. **10**
ii) Explain image sharpening in frequency domain. **10**

OR

- ii) Explain dilation and erosion with example. **10**

SECTION – II

4. Solve **any four** from the following : **(5×4=20)**
- i) Explain various image redundancy techniques.
 - ii) What is error free compression ?
 - iii) Explain sub band coding technique.
 - iv) Explain edge linking technique.
 - v) What is fidelity criteria and explain.
5. i) Explain the JEPEG coding in detail. **10**
ii) Explain the chain coding with an example. **10**

OR

- ii) Explain fingerprint recognition as an application in image processing. **10**

Marks : 80

Instructions : 1) **All questions are compulsory.**
2) **Figures to the right indicate full marks.**

SECTION – I

2. Solve **any four** : **(4×5=20)**
- i) Explain image restoration Model.
 - ii) Explain RGB color Model.
 - iii) Explain smoothing filters.
 - iv) Explain image sampling and quantization.
 - v) Define histogram and explain histogram equalization.
3. i) Explain different type of image acquisition sensors and their parameters. **10**
ii) Explain image sharpening in frequency domain. **10**

OR

- ii) Explain dilation and erosion with example. **10**

SECTION – II

4. Solve **any four** from the following : **(5×4=20)**
- i) Explain various image redundancy techniques.
 - ii) What is error free compression ?
 - iii) Explain sub band coding technique.
 - iv) Explain edge linking technique.
 - v) What is fidelity criteria and explain.
5. i) Explain the JEPEG coding in detail. **10**
ii) Explain the chain coding with an example. **10**

OR

- ii) Explain fingerprint recognition as an application in image processing. **10**

B.E. (E & TC) (Part – I) Examination, 2016
Elective – I : ADVANCE DIGITAL SIGNAL PROCESSING

Day and Date : Thursday, 8-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

- Instructions :**
- 1) **All questions are compulsory.**
 - 2) **Figures to the right indicate full marks.**
 - 3) **Assume suitable data, if required.**
 - 4) **Q. No. 1 is compulsory. It should be solved in first 30 minutes in Answer Book Page No. 3. Each question carries one mark.**
 - 5) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(1×20=20)

- 1) Wavelet transformation is used for
 - a) Only audio processing
 - b) Only image processing
 - c) Both image + audio processing
 - d) Both video processing + image processing
- 2) How many complex multiplications are need to be performed for each FFT algorithm ?
 - a) $(N/2) \log N$
 - b) $N \log_2 N$
 - c) $(N/2) \log_2 N$
 - d) None of the above
- 3) The increase in sampling rate is referred as
 - a) Decimation
 - b) Down sampling
 - c) Interpolator
 - d) None of the above
- 4) The power spectrum of a given autocorrelation sequence $r_x(k) = \delta(k-1)$ is
 - a) z^{-1}
 - b) z
 - c) 0
 - d) None of the above
- 5) The Wiener Hopf equation for the FIR Wiener filter is
 - a) $R_x w = r_{dx}$
 - b) $r_{dx} w = R_x$
 - c) $r_{dx}^{-1} w = R_x$
 - d) None
- 6) The frequency response of a system $h(n) = \delta(n) - \delta(n-1)$ is given by
 - a) $\delta(w) - \delta(w-1)$
 - b) $1 - e^{jw}$
 - c) $u(w) - u(w-1)$
 - d) None of the above
- 7) The Noise-Whitening filter for the auto-regressive process is
 - a) All pole system
 - b) All zero system
 - c) Pole zero system
 - d) None

P.T.O.

8) Which process has a block diagram as shown in the figure below ?

- a) Sampling rate conversion b) Interpolation
c) Decimation d) None of the mentioned
- 9) The modelling error of 1st order all pole model for a signal $x(n)$ having auto-correlation value $r_x(0) = 1$, $r_x(1) = 0.5$ is
a) 1 b) $\frac{1}{2}$ c) 0 d) $\frac{3}{4}$
- 10) For higher values of AR model, order results in
a) Smooth waves missing peaks
b) Less smooth waves include spurious peaks
c) Does not depend on model order
d) Depends but smoothing of wave doesn't depend on model order
- 11) AR model is defined for
a) Non stationary process b) Non white signals
c) Thermal noise d) None of these
- 12) Wiener filter is
a) Conventional filter b) Adaptive filters c) All pole FIR filter d) None of these
- 13) Which among under given is not true for multirate signal processing ?
a) Decimation b) Interpolation c) D/I d) None of these
- 14) The anti-aliasing filter in a DSP system is a
a) Low pass filter b) High pass filter c) Band pass filter d) Band stop filter
- 15) The principle of orthogonality is used in
a) Multirate signal processing b) Wavelet transformation
c) Weiner filtering d) Conventional filtering
- 16) Modern day equalization is based on
a) Conventional filter b) Digital filters c) Adaptive filters d) None of these
- 17) Special-purpose processors can be subdivided into many different groups which are
a) Microcontrollers b) Digital Signal Processors (DSPs)
c) Graphics Processing Units (GPUs) d) All of the above
- 18) MRA equation is also called
a) Modulating equation b) FIR filter
c) Dilation equation d) Span equation
- 19) In unsampling after every sample placing value is
a) 1 b) 0 c) 2 d) 3
- 20) Haar transformation is defined by
a) $T = HFH^T$ b) $T = HFH$ c) $T = HF^T$ d) $T = H^T$

B.E. (E & TC) (Part – I) Examination, 2016
Elective – I : ADVANCE DIGITAL SIGNAL PROCESSING

Day and Date : Thursday, 8-12-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

- Instructions :** 1) **All** questions are **compulsory**.
2) Figures to the **right** indicate **full** marks.
3) Assume **suitable** data, if required.

SECTION – I

2. Attempt **any four** of the following : **(4×5=20)**
- a) Explain applications of multirate systems.
 - b) Explain Haar wavelet.
 - c) Explain the applications of wavelet transform.
 - d) Explain the concept of decimation in multirate signal processing.
 - e) Draw the structure of N = 8 point DIF FFT structure.
3. Attempt **any two** of the following : **(2×10=20)**
- a) Describe the sampling rate conversion by a rational factor $\left(\frac{1}{D}\right)$.
 - b) What are the advantages of polyphase filter structure ? Draw the polyphase filter structure with example.
 - c) Explain scaling function in wavelets.

SECTION – II

4. Attempt **any four** of the following : **(4×5=20)**
- a) Explain the relationship between autocorrelation and the model parameter.
 - b) Compare general purpose microprocessors with digital signal processors.
 - c) Explain the concept of adaptive filtering.
 - d) Explain the Burg method for estimation.
 - e) Explain Wiener filter theory.
5. Attempt **any two** of the following : **(2×10=20)**
- a) Explain the method of periodogram for the estimation of power density spectrum.
 - b) Explain the LMS algorithm in details with suitable example.
 - c) Explain with block diagram the computer architecture for signal processing.

Max. Marks : 100

- Instructions :** 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
 3) Assume suitable data if **required**
 4) Figures to the **right** indicate **full** marks.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) Gaussian density is also known as
 - a) Estimation density
 - b) Parameter density
 - c) Normal density
 - d) All of the above
- 2) Which of the following are frequently nearly identical ?
 - a) Bayesian, HMM
 - b) HMM, Maximum Likelihood
 - c) Newton Descent
 - d) Bayesian Maximum Likelihood
- 3) In decision theory an expected loss is called a risk and ($\alpha_{ij}x$) is called the
 - a) Conditional risk
 - b) Joint risk
 - c) Marginal risk
 - d) None of the above
- 4) Squared Mahalanobis distance from x to μ is given by
 - a) $r^2 = (x - \mu)^t \Sigma^{-1}(x - \mu)$
 - b) $r^2 = (x + \mu)^t \Sigma^{-1}(x - \mu)$
 - c) $r^2 = (x + \mu)^t \Sigma^{-1}(x + \mu)$
 - d) None of the above
- 5) Suppose we have an HMM, complete with transition probabilities a_{ij} and b_{jk} , determine the probability that a particular sequence of visible states V_T was generated by that model is known as
 - a) The decoding problem
 - b) The learning problem
 - c) The evaluation problem
 - d) None of the above
- 6) What are the problems of dimensionality ?
 - a) Accuracy
 - b) Dimension
 - c) Over fitting
 - d) All of the above
- 7) A generalized linear discriminant function is given by
 - a) $g(x) = ay$
 - b) $g(x) = a^t y$
 - c) $g(x) = ay^t$
 - d) None of the above

P.T.O.

- 8) The decision region for a Parzen window classifier depends upon the choice of
 - a) Window name
 - b) Window function
 - c) Window width
 - d) None of the above
- 9) The probability density function for x , given that the nature is w is denoted by
 - a) $p(x|w)$
 - b) $p(w|x)$
 - c) $p(w)$
 - d) $p(x)$
- 10) The density estimation in which the volume V_n is shrunk according to function $V_n = \frac{1}{\sqrt{n}}$ is called
 - a) Kn-nearest neighbor
 - b) Bayesian estimation
 - c) Parzen window
 - d) All of the above
- 11) A well formed cluster has
 - a) Compact cloud
 - b) Dispersed cloud
 - c) Less cloud
 - d) None of these
- 12) Triangle inequality is given by
 - a) $D(a, b) + D(b, c) \geq D(a, c)$
 - b) $D(a, b) + D(b, c) = O(a, c)$
 - c) $D(a, b) + D(b, c) \leq O(a, c)$
 - d) $O(a, b) - O(b, c) > O(a, c)$
- 13) In k-means clustering, k refers to
 - a) The no. of sample points
 - b) The no. of clusters
 - c) Samples in the cluster
 - d) None of these
- 14) In posterior density $p(\theta|D)$ is called
 - a) Weight vector
 - b) Threshold vector
 - c) Parameter vector
 - d) All of these
- 15) A discriminant function $g(x)$ is linear then its decision surface is called
 - a) Plane
 - b) Hyper plane
 - c) Both a) and b)
 - d) None of the above
- 16) Parzen window method is used for
 - a) Estimating error rate
 - b) Estimating nearest neighbor
 - c) Estimating density
 - d) All of the above
- 17) If the sequence has the property that whenever two samples are in the same cluster at level K , they remain together at all higher levels, then sequence is said to be
 - a) Hierarchical clustered
 - b) On-line clustered
 - c) Tree-clustered
 - d) All of the above
- 18) Newton's algorithm is not applicable if the Hessian matrix is
 - a) Normal
 - b) Singular
 - c) Either a) or b)
 - d) Both a) and b)
- 19) The solution vector exists on
 - a) Negative side of every hyperplane
 - b) Positive side of every hyperplane
 - c) Both sides
 - d) None of the above
- 20) If the overlapping between component densities of normal mixture is small then the convergence is
 - a) Slow
 - b) Fast
 - c) Moderate
 - d) Unchange

B.E. (E & TC) (Part – II) (Old) Examination, 2016
PATTERN RECOGNITION (Elective – II)

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

- Instructions :** 1) *All questions are **compulsory**.*
2) *Figures to the **right** indicate **full** marks.*
3) *Assume suitable data if **necessary**.*

SECTION – I

2. Attempt **any four** : **(4×6=24)**

- a) Mention and explain sources of classification error.
- b) Obtain an expression for linear discriminant function for two category case.
- c) Define
 - a) Feature space
 - b) Risk.
- d) What is supervised learning ?
- e) State and prove Bayes' Theorem.

3. Attempt **any two** : **(2×8=16)**

- a) Explain HMM decoding algorithm.
- b) Explain Bayesian parameter estimation for the case where mean μ is the only unknown parameter.
- c) Write a note on Bayesian Parameter Estimation.

SECTION – II

4. Attempt **any four** : **(4×6=24)**

- a) What are the properties of metrics ? Write an expression for Euclidean Distance.
- b) Explain Kn-nearest neighbor estimation. Illustrate with diagrams.

Set P

- c) Explain hierarchical clustering.
- d) Explain determinant criteria for clustering.
- e) Explain k-means clustering algorithm.

5. Attempt **any two** :

(2×8=16)

- a) Compare supervised and unsupervised learning.
 - b) Give an expression for linear discriminant function in multcategory case.
 - c) Compare between Parzen window and Kn-nearest neighbor estimation.
-

B.E. (E & TC) (Part – II) (Old) Examination, 2016
PATTERN RECOGNITION (Elective – II)

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

- Instructions :**
- 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 - 2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**
 - 3) Assume suitable data if **required**
 - 4) Figures to the **right** indicate **full** marks.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) Parzen window method is used for
 - a) Estimating error rate
 - b) Estimating nearest neighbor
 - c) Estimating density
 - d) All of the above
- 2) If the sequence has the property that whenever two samples are in the same cluster at level K, they remain together at all higher levels, then sequence is said to be
 - a) Hierarchical clustered
 - b) On-line clustered
 - c) Tree-clustered
 - d) All of the above
- 3) Newton's algorithm is not applicable if the Hessian matrix is
 - a) Normal
 - b) Singular
 - c) Either a) or b)
 - d) Both a) and b)
- 4) The solution vector exists on
 - a) Negative side of every hyperplane
 - b) Positive side of every hyperplane
 - c) Both sides
 - d) None of the above
- 5) If the overlapping between component densities of normal mixture is small then the convergence is
 - a) Slow
 - b) Fast
 - c) Moderate
 - d) Unchange
- 6) Gaussian density is also known as
 - a) Estimation density
 - b) Parameter density
 - c) Normal density
 - d) All of the above
- 7) Which of the following are frequently nearly identical ?
 - a) Bayesian, HMM
 - b) HMM, Maximum Likelihood
 - c) Newton Descent
 - d) Bayesian Maximum Likelihood
- 8) In decision theory an expected loss is called a risk and ($\alpha_{ij}|x$) is called the
 - a) Conditional risk
 - b) Joint risk
 - c) Marginal risk
 - d) None of the above

P.T.O.

- 9) Squared Mahalanobis distance from x to μ is given by
- a) $r^2 = (x - \mu)^t \Sigma^{-1}(x - \mu)$ b) $r^2 = (x + \mu)^t \Sigma^{-1}(x - \mu)$
 c) $r^2 = (x + \mu)^t \Sigma^{-1}(x + \mu)$ d) None of the above
- 10) Suppose we have an HMM, complete with transition probabilities a_{ij} and b_{jk} , determine the probability that a particular sequence of visible states V_T was generated by that model is known as
- a) The decoding problem b) The learning problem
 c) The evaluation problem d) None of the above
- 11) What are the problems of dimensionality ?
- a) Accuracy b) Dimension c) Over fitting d) All of the above
- 12) A generalized linear discriminant function is given by
- a) $g(x) = ay$ b) $g(x) = a^t y$
 c) $g(x) = ay^t$ d) None of the above
- 13) The decision region for a Parzon window classifier depends upon the choice of
- a) Window name b) Window function
 c) Window width d) None of the above
- 14) The probability density function for x , given that the nature is w is denoted by
- a) $p(x|w)$ b) $p(w|x)$ c) $p(w)$ d) $p(x)$
- 15) The density estimation in which the volume V_n is shrunk according to function
- $$V_n = \frac{1}{\sqrt{n}}$$
- is called
- a) Kn-nearest neighbor b) Bayesian estimation
 c) Parzen window d) All of the above
- 16) A well formed cluster has
- a) Compact cloud b) Dispersed cloud
 c) Less cloud d) None of these
- 17) Triangle inequality is given by
- a) $D(a, b) + D(b, c) \geq D(a, c)$ b) $D(a, b) + D(b, c) = O(a, c)$
 c) $D(a, b) + D(b, c) \leq O(a, c)$ d) $O(a, b) - O(b, c) > O(a, c)$
- 18) In k-means clustering, k refers to
- a) The no. of sample points b) The no. of clusters
 c) Samples in the cluster d) None of these
- 19) In posterior density $p(\theta|D)$ is called
- a) Weight vector b) Threshold vector
 c) Parameter vector d) All of these
- 20) A discriminant function $g(x)$ is linear then its decision surface is called
- a) Plane b) Hyper plane
 c) Both a) and b) d) None of the above

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.

2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

1) De-morgan's principle can be defined as

- a) $\overline{A \cap B} = \overline{A} \cap \overline{B}$ b) $\overline{A \cap B} = \overline{A} \cup \overline{B}$ c) $\overline{A \cup B} = \overline{A} \cup \overline{B}$ d) None

2) When the universe X is discrete and finite, then the notation convention for fuzzy set \tilde{A} is given as

a) $\tilde{A} = \left\{ \int \frac{\mu_{\tilde{A}}(x)}{x} \right\}$

b) $\tilde{A} = \left\{ \frac{d}{dx} \frac{\mu_{\tilde{A}}(x)}{x} \right\}$

c) $\tilde{A} = \sum_i \frac{\mu_{\tilde{A}}(x_i)}{x_i}$

d) None

3) A tolerance relation R is also called as _____ relation.

- a) Equivalence b) Proximity c) Both a) and b) d) None

4) Lambda cut obey the property

a) $\left(\tilde{A} \cup \tilde{B} \right)_{\lambda} = A_{\lambda} \cup B_{\lambda}$

b) $\left(\tilde{A} \cup \tilde{B} \right)_{\lambda} = A_{\lambda} \cap B_{\lambda}$

c) $\left(\tilde{A} \cap \tilde{B} \right)_{\lambda} = A_{\lambda} \cup B_{\lambda}$

d) None

5) Membership value assignment includes

- a) Intuition b) Inference c) Rank ordering d) All

6) In inductive reasoning, the membership function can be created as _____ generation.

- a) Manual b) Automatic c) Both a) and b) d) None

P.T.O.

- 7) Interval arithmetic follows property of
 - a) Associativity b) Commutativity c) Distributivity d) Both a) and b)
- 8) Approximate methods of extension mostly used for _____ function.
 - a) Discrete valued b) Random
 - c) Continuous d) None
- 9) Feature analysis components are
 - a) Nomination b) Selection c) Extraction d) All of these
- 10) Pattern recognition data is of following type
 - a) design b) test c) both a) and b) d) a) or b)
- 11) Scalar measure of “degree of consensus” is produced from individual _____ of those in decision group.
 - a) Consensus b) Preference c) Both a) and b) d) None
- 12) For general form, decision function (D) is function represented as intersection of decision measure where it includes
 - a) Objective b) Importance of objective
 - c) Preference and consensus d) Both a) and b)
- 13) Non-transitive ranking is _____ concepts.
 - a) Crisp b) Cardinal c) Non-cardinal d) None
- 14) Physical system under control is called
 - a) Project b) Process c) Plant d) Sensor
- 15) With random variables we can quantify the uncertainty in ordering with a _____
 - a) Convolution differentiation b) Convolutional integral
 - c) Sum d) None
- 16) Average certainty in \tilde{R} is defined as $c(\tilde{R}) =$
 - a) $\frac{\text{tr}(\tilde{R}^2)}{n(n-1)}$ b) $\frac{\text{tr}(\tilde{R}\tilde{R}^T)}{n(n-1)/2}$ c) $\frac{\text{tr}(\tilde{R})}{n(n-1)/2}$ d) None
- 17) The optimum decision a^* , for multiobjective decision making $\mu_D(a^*) =$
 - a) $\max_{a \in A} (\mu_D(a))$ b) $\min_{a \in A} (\mu_D(a))$ c) Both a) and b) d) None
- 18) In linear programming problem, the function to be minimized or maximized is called
 - a) Constraint matrix b) Objective function
 - c) Linear function d) None
- 19) A common SPC technique use _____ charts.
 - a) $\bar{X} - R$ b) P c) R d) $\bar{X} - \bar{R}$
- 20) Genetic algorithm usually used for _____ solution.
 - a) Average b) Minimum c) Optimum d) None

2. Solve **any four** : **(4×5=20)**

- What is λ cut ? Prove the property of associativity .
- With extended Venn diagram prove excluded middle axioms.
- Explain image enhancement using fuzzy logic.
- If fuzzy set \tilde{A} and \tilde{B} are represented as follows, find $\overline{\tilde{A}}$, $\tilde{A} \mid \tilde{B}$, $\tilde{B} \mid \tilde{A}$,

$$\tilde{A} = \left\{ \frac{1}{2} + \frac{0.5}{3} + \frac{0.3}{4} + \frac{0.2}{5} \right\}, \quad \tilde{B} = \left\{ \frac{0.5}{2} + \frac{0.7}{3} + \frac{0.2}{4} + \frac{0.4}{5} \right\}.$$

- Explain fuzzy set extension principle.

3. a) Explain fuzzy automata in detail. **(1×10=10)**

b) If $R_{\sim 1} = \begin{bmatrix} 1 & 0.8 & 0 & 0.1 & 0.2 \\ 0.8 & 1 & 0.4 & 0 & 0.9 \\ 0 & 0.4 & 1 & 0 & 0 \\ 0.1 & 0 & 0 & 1 & 0.5 \\ 0.2 & 0.9 & 0 & 0.5 & 1 \end{bmatrix}$ is reflexive and symmetric . Prove that

$$R_{\sim 1}^4 = R_1 \circ R_1 \circ R_1 \circ R_1 = \tilde{R} \text{ i.e. transitivity results.} \quad \text{ (1×10=10)}$$

OR

- Develop fuzzy membership function for fuzzy number “approximately 2 and approximately 6” using following function shape :
 - Symmetric triangle
 - Trapezoid.

Set P

SECTION – II

4. Answer **any four** : **(4×5=20)**

- a) Explain simple fuzzy control.
- b) Explain neuro fuzzy system.
- c) What is fuzzy cognitive map ?
- d) Write a short note on fuzzy regression.
- e) Explain fuzzy expert system.

5. a) The professional photographers are asked to suggest the best camera between models of ABCD. The pairwise comparison/relation matrix is

$$\tilde{R} = \begin{bmatrix} 0 & 0.8 & 0.5 & 0.4 \\ 0.2 & 0 & 0.4 & 0.2 \\ 0.5 & 0.6 & 0 & 0.2 \\ 0.6 & 0.8 & 0.8 & 0 \end{bmatrix} \text{ determine average fuzziness and average certainty.}$$

(1×10=10)

b) Explain :

- i) Fuzzy ordering
- ii) Multiobjective decision.

(1×10=10)

OR

b) What is SPC ? Explain in detail measurement and attribute SPC.

Q

**B.E. (E & TC) (Part – II) Examination, 2016
FUZZY LOGIC (Elective – II) (Old)**

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

Instructions: 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.

2) **Answer MCQ/Objective type questions on Page No. 3 only. Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.**

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

1) Average certainty in \tilde{R} is defined as $c(\tilde{R}) =$

- a) $\frac{\text{tr}(\tilde{R}^2)}{n(n-1)}$ b) $\frac{\text{tr}(\tilde{R}\tilde{R}^T)}{n(n-1)/2}$ c) $\frac{\text{tr}(\tilde{R})}{n(n-1)/2}$ d) None

2) The optimum decision a^* , for multiobjective decision making $\mu_D(a^*) =$

- a) $\max_{a \in A} (\mu_D(a))$ b) $\min_{a \in A} (\mu_D(a))$ c) Both a) and b) d) None

3) In linear programming problem, the function to be minimized or maximized is called

- a) Constraint matrix b) Objective function
c) Linear function d) None

4) A common SPC technique use _____ charts.

- a) $\bar{X} - R$ b) P c) R d) $\bar{X} - \bar{R}$

5) Genetic algorithm usually used for _____ solution.

- a) Average b) Minimum c) Optimum d) None

6) De-morgan's principle can be defined as

- a) $\overline{A \cap B} = \bar{A} \cap \bar{B}$ b) $\overline{A \cap B} = \bar{A} \cup \bar{B}$ c) $\overline{A \cup B} = \bar{A} \cup \bar{B}$ d) None

P.T.O.

- 7) When the universe X is discrete and finite, then the notation convention for fuzzy set \tilde{A} is given as
- a) $\tilde{A} = \left\{ \int \frac{\mu_{\tilde{A}}(x)}{x} \right\}$ b) $\tilde{A} = \left\{ \frac{d}{dx} \frac{\mu_{\tilde{A}}(x)}{x} \right\}$ c) $\tilde{A} = \sum_i \frac{\mu_{\tilde{A}}(x_i)}{x_i}$ d) None
- 8) A tolerance relation R is also called as _____ relation.
a) Equivalence b) Proximity c) Both a) and b) d) None
- 9) Lambda cut obey the property
- a) $\left(\tilde{A} \cup \tilde{B} \right)_\lambda = A_\lambda \cup B_\lambda$ b) $\left(\tilde{A} \cup \tilde{B} \right)_\lambda = A_\lambda \cap B_\lambda$
c) $\left(\tilde{A} \cap \tilde{B} \right)_\lambda = A_\lambda \cup B_\lambda$ d) None
- 10) Membership value assignment includes
a) Intuition b) Inference c) Rank ordering d) All
- 11) In inductive reasoning, the membership function can be created as _____ generation.
a) Manual b) Automatic c) Both a) and b) d) None
- 12) Interval arithmetic follows property of
a) Associativity b) Commutativity c) Distributivity d) Both a) and b)
- 13) Approximate methods of extension mostly used for _____ function.
a) Discrete valued b) Random
c) Continuous d) None
- 14) Feature analysis components are
a) Nomination b) Selection c) Extraction d) All of these
- 15) Pattern recognition data is of following type
a) design b) test c) both a) and b) d) a) or b)
- 16) Scalar measure of “degree of consensus” is produced from individual _____ of those in decision group.
a) Consensus b) Preference c) Both a) and b) d) None
- 17) For general form, decision function (D) is function represented as intersection of decision measure where it includes
a) Objective b) Importance of objective
c) Preference and consensus d) Both a) and b)
- 18) Non-transitive ranking is _____ concepts.
a) Crisp b) Cardinal c) Non-cardinal d) None
- 19) Physical system under control is called
a) Project b) Process c) Plant d) Sensor
- 20) With random variables we can quantify the uncertainty in ordering with a
a) Convolution differentiation b) Convolutional integral
c) Sum d) None

a) design b) test c) both a) and b) d) a) or b)
- 6) Scalar measure of "degree of consensus" is produced from individual _____ of those in decision group.
a) Consensus b) Preference c) Both a) and b) d) None
- 7) For general form, decision function (D) is function represented as intersection of decision measure where it includes
a) Objective b) Importance of objective
c) Preference and consensus d) Both a) and b)
- 8) Non-transitive ranking is _____ concepts.
a) Crisp b) Cardinal c) Non-cardinal d) None
- 9) Physical system under control is called
a) Project b) Process c) Plant d) Sensor

P.T.O.

10) With random variables we can quantify the uncertainty in ordering with a

- a) Convolution differentiation b) Convolutional integral
c) Sum d) None

11) Average certainty in \tilde{R} is defined as $c(\tilde{R}) =$

- a) $\frac{\text{tr}(\tilde{R}^2)}{n(n-1)}$ b) $\frac{\text{tr}(\tilde{R}\tilde{R}^T)}{n(n-1)/2}$ c) $\frac{\text{tr}(\tilde{R})}{n(n-1)/2}$ d) None

12) The optimum decision a^* , for multiobjective decision making $\mu_D(a^*) =$

- a) $\max_{a \in A} (\mu_D(a))$ b) $\min_{a \in A} (\mu_D(a))$ c) Both a) and b) d) None

13) In linear programming problem, the function to be minimized or maximized is called

- a) Constraint matrix b) Objective function
c) Linear function d) None

14) A common SPC technique use _____ charts.

- a) $\bar{X} - R$ b) P c) R d) $\bar{X} - \bar{R}$

15) Genetic algorithm usually used for _____ solution.

- a) Average b) Minimum c) Optimum d) None

16) De-morgan's principle can be defined as

- a) $\overline{A \cap B} = \overline{A} \cap \overline{B}$ b) $\overline{A \cap B} = \overline{A} \cup \overline{B}$ c) $\overline{A \cup B} = \overline{A} \cup \overline{B}$ d) None

17) When the universe X is discrete and finite, then the notation convention for fuzzy set \tilde{A} is given as

- a) $\tilde{A} = \left\{ \int \frac{\mu_{\tilde{A}}(x)}{x} \right\}$ b) $\tilde{A} = \left\{ \frac{d}{dx} \frac{\mu_{\tilde{A}}(x)}{x} \right\}$
c) $\tilde{A} = \sum_i \frac{\mu_{\tilde{A}}(x_i)}{x_i}$ d) None

18) A tolerance relation R is also called as _____ relation.

- a) Equivalence b) Proximity c) Both a) and b) d) None

19) Lambda cut obey the property

- a) $\left(\tilde{A} \cup \tilde{B} \right)_\lambda = \tilde{A}_\lambda \cup \tilde{B}_\lambda$ b) $\left(\tilde{A} \cup \tilde{B} \right)_\lambda = \tilde{A}_\lambda \cap \tilde{B}_\lambda$
c) $\left(\tilde{A} \cap \tilde{B} \right)_\lambda = \tilde{A}_\lambda \cup \tilde{B}_\lambda$ d) None

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct alternative : **(20×1=20)**

- 1) Only data ADSP-21061 is _____ bit processor.
a) 8 b) 16 c) 32 d) 64
- 2) The AR ALU (ARALU) performs _____ arithmetic on _____ numbers.
a) Unsigned, 16 b) Signed, 16 c) Signed, 32 d) Unsigned, 32
- 3) The TMS 320C6X generation of DSPs is based on _____ architecture.
a) VelocITI b) Velocity c) Velocit d) None
- 4) The ARALU stands for
a) Ancillary Register ALU b) Auxiliary Register ALU
c) Anchor Register ALU d) None
- 5) SRAM and integrated input output peripherals in ADSP-21061 are
a) Single ported b) Dual ported
c) Single/dual ported d) Both a) and c)
- 6) The TMS320C6X is _____ processor.
a) Floating point b) Fixed point
c) Floating/fixed point d) All above
- 7) The multipliers multiply _____ × _____ numbers.
a) 16, 16 b) 17, 17 c) 24, 24 d) 32, 32

P.T.O.

- 8) The No. of 32 bit general purpose registers in C6X is
a) 4 b) 8 c) 16 d) 32
- 9) The register used for which holds the address of the current data memory page is
a) DP b) ARP c) ARB d) None
- 10) The 320C54 DSP are said to have advanced Harvard architecture because
a) They have separate memory bus structure for data and program
b) They have instruction the enable data transfer between the program and data
c) They have same memory bus structure for data and program
d) The contents of program memory cannot copy into data memory or vice versa
- 11) _____ independent buses for dual data fetch, instruction fetch and nonintrusive I/O.
a) 4 b) 8 c) 6 d) 16
- 12) The _____ permits execution of logical operation on data without affecting the contents of ACC.
a) Parallel logic unit b) Auxiliary ALU
c) Central ALU d) None
- 13) L1P and L1D caches are each of _____ K-word length.
a) 8 b) 16 c) 4 d) 64
- 14) The C6X pipeline requires _____ phases in fetch stage.
a) 2 b) 4 c) 5 d) 6
- 15) The result of operation performed in central ALU are stored into
a) ACC b) ACCB c) TREG0 d) PREG
- 16) The C6X pipeline requires _____ phases in decode stage.
a) 2 b) 24 c) 5 d) 6
- 17) DSP processors can be used to implement _____ application.
a) Image processing b) Video processing
c) Signal processing d) All above
- 18) In TMS320C6X internal memory is organized as
a) Separate program and data b) Not separate program and data
c) Only program d) Only data
- 19) The data move (DMOV) instruction can use
a) Either direct and indirect addressing mode
b) Either direct or indirect addressing mode
c) Indirect addressing
d) All above
- 20) The L2 cache of _____ K word is shared by both program and data memory space.
a) 4 b) 8 c) 16 d) 64

B.E. (Electronics and Telecommunication) (Part – II) (Old)
Examination, 2016
Elective – II : DSP PROCESSORS AND APPLICATION

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

Instructions : 1) *All questions are compulsory.*
2) *Assume suitable data if necessary.*

SECTION – I

2. Attempt **any four** : (5×4=20)

- 1) Explain about fixed point DSP processors.
- 2) Compare between fixed point and floating point DSPs.
- 3) Enlist the features of TMS 320C54X.
- 4) List the functional units in CALU of 5X and explain.
- 5) What are different buses of TMS 320C54X and their functions ?

3. Attempt **any two** : (10×2=20)

- 1) Draw the architecture of ADSP-21061 and explain in detail.
- 2) Explain memory and IO interface features of ADSP 21061.
- 3) What are the various interrupts supported by 54X DSPs and explain in detail ?

SECTION – II

4. Attempt **any four** : (5×4=20)

- 1) Draw cache configuration register (CCFG).
- 2) Explain how the C6X architecture differs from C54X.
- 3) Explain the use of HPI in C6X.
- 4) Explain the operation of L2 cache controller.
- 5) Explain FIR implementation using TMS 320C6X DSP processor.

5. Attempt **any two** : (10×2=20)

- 1) Draw and explain TMS320C6X CPU data paths.
- 2) Explain internal architecture of TMS320C6X processor.
- 3) Explain the C6X pipeline operation in detail.

B.E. (Electronics and Telecommunication) (Part – II) (Old)
Examination, 2016
Elective – II : DSP PROCESSORS AND APPLICATION

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Total Marks : 100

- Instructions :** 1) **All questions are compulsory.**
2) Assume **suitable** data if necessary.
3) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
4) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct alternative : **(20×1=20)**

- 1) The C6X pipeline requires _____ phases in decode stage.
a) 2 b) 24 c) 5 d) 6
- 2) DSP processors can be used to implement _____ application.
a) Image processing b) Video processing
c) Signal processing d) All above
- 3) In TMS320C6X internal memory is organized as
a) Separate program and data b) Not separate program and data
c) Only program d) Only data
- 4) The data move (DMOV) instruction can use
a) Either direct and indirect addressing mode
b) Either direct or indirect addressing mode
c) Indirect addressing
d) All above
- 5) The L2 cache of _____ K word is shared by both program and data memory space.
a) 4 b) 8 c) 16 d) 64
- 6) Only data ADSP-21061 is _____ bit processor.
a) 8 b) 16 c) 32 d) 64

P.T.O.

- 7) The AR ALU (ARALU) performs _____ arithmetic on _____ numbers.
a) Unsigned, 16 b) Signed, 16 c) Signed, 32 d) Unsigned, 32
- 8) The TMS 320C6X generation of DSPs is based on _____ architecture.
a) VelociTI b) Velocity c) Velocit d) None
- 9) The ARALU stands for
a) Ancillary Register ALU b) Auxiliary Register ALU
c) Anchor Register ALU d) None
- 10) SRAM and integrated input output peripherals in ADSP-21061 are
a) Single ported b) Dual ported
c) Single/dual ported d) Both a) and c)
- 11) The TMS320C6X is _____ processor.
a) Floating point b) Fixed point
c) Floating/fixed point d) All above
- 12) The multipliers multiply _____ × _____ numbers.
a) 16, 16 b) 17, 17 c) 24, 24 d) 32, 32
- 13) The No. of 32 bit general purpose registers in C6X is
a) 4 b) 8 c) 16 d) 32
- 14) The register used for which holds the address of the current data memory page is
a) DP b) ARP c) ARB d) None
- 15) The 320C54 DSP are said to have advanced Harvard architecture because
a) They have separate memory bus structure for data and program
b) They have instruction the enable data transfer between the program and data
c) They have same memory bus structure for data and program
d) The contents of program memory cannot copy into data memory or vice versa
- 16) _____ independent buses for dual data fetch, instruction fetch and nonintrusive I/O.
a) 4 b) 8 c) 6 d) 16
- 17) The _____ permits execution of logical operation on data without affecting the contents of ACC.
a) Parallel logic unit b) Auxiliary ALU
c) Central ALU d) None
- 18) L1P and L1D caches are each of _____ K-word length.
a) 8 b) 16 c) 4 d) 64
- 19) The C6X pipeline requires _____ phases in fetch stage.
a) 2 b) 4 c) 5 d) 6
- 20) The result of operation performed in central ALU are stored into
a) ACC b) ACCB c) TREG0 d) PREG

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct alternative :

(20×1=20)

- 1) The TMS320C6X is _____ processor.
a) Floating point b) Fixed point
c) Floating/fixed point d) All above
- 2) The multipliers multiply _____ × _____ numbers.
a) 16, 16 b) 17, 17 c) 24, 24 d) 32, 32
- 3) The No. of 32 bit general purpose registers in C6X is
a) 4 b) 8 c) 16 d) 32
- 4) The register used for which holds the address of the current data memory page is
a) DP b) ARP c) ARB d) None
- 5) The 320C54 DSP are said to have advanced Harvard architecture because
a) They have separate memory bus structure for data and program
b) They have instruction the enable data transfer between the program and data
c) They have same memory bus structure for data and program
d) The contents of program memory cannot copy into data memory or vice versa
- 6) _____ independent buses for dual data fetch, instruction fetch and nonintrusive I/O.
a) 4 b) 8 c) 6 d) 16
- 7) The _____ permits execution of logical operation on data without affecting the contents of ACC.
a) Parallel logic unit b) Auxiliary ALU
c) Central ALU d) None

P.T.O.

- 8) L1P and L1D caches are each of _____ K-word length.
a) 8 b) 16 c) 4 d) 64
- 9) The C6X pipeline requires _____ phases in fetch stage.
a) 2 b) 4 c) 5 d) 6
- 10) The result of operation performed in central ALU are stored into
a) ACC b) ACCB c) TREG0 d) PREG
- 11) The C6X pipeline requires _____ phases in decode stage.
a) 2 b) 24 c) 5 d) 6
- 12) DSP processors can be used to implement _____ application.
a) Image processing b) Video processing
c) Signal processing d) All above
- 13) In TMS320C6X internal memory is organized as
a) Separate program and data b) Not separate program and data
c) Only program d) Only data
- 14) The data move (DMOV) instruction can use
a) Either direct and indirect addressing mode
b) Either direct or indirect addressing mode
c) Indirect addressing
d) All above
- 15) The L2 cache of _____ K word is shared by both program and data memory space.
a) 4 b) 8 c) 16 d) 64
- 16) Only data ADSP-21061 is _____ bit processor.
a) 8 b) 16 c) 32 d) 64
- 17) The AR ALU (ARALU) performs _____ arithmetic on _____ numbers.
a) Unsigned, 16 b) Signed, 16 c) Signed, 32 d) Unsigned, 32
- 18) The TMS 320C6X generation of DSPs is based on _____ architecture.
a) VelociTI b) Velocity c) Velocit d) None
- 19) The ARALU stands for
a) Ancillary Register ALU b) Auxiliary Register ALU
c) Anchor Register ALU d) None

**B.E. (Electronics and Telecommunication Engineering) (Part – II) (New)
Examination, 2016
Elective – II : WIRELESS SENSOR NETWORKS**

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Max. Marks : 100

Instructions : 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer : **(20×1=20)**

- 1) _____ is a basic unit with on board sensors, processor, memory, wireless modem and power supply.
a) Sensor b) Sensor node c) Routing d) None of the above
- 2) Sensor network is subject to a unique set of resource constraints such as
a) Finite on board battery power b) Limited n/w connection bandwidth
c) Both a) and b) d) None of the above
- 3) Advantage of sensor network is
a) Energy b) Detection c) Both a) and b) d) None of the above
- 4) In wireless adhoc network
a) Access point is not required b) Access point is required
c) Nodes are not required d) None of the above
- 5) The network in which all the nodes are symmetric and there is no central control or hierarchy is
a) MANET b) Client Server Technology
c) Peer to Peer d) None of the above
- 6) In single node architecture, following hardware component is used
a) Controller and memory b) Communication device
c) Sensors/Actuators d) All of the above
- 7) Design and optimization goal for WSNs is
a) QoS support b) Energy efficiency
c) Scalability d) All of above
- 8) In sensor network, _____ layers are required.
a) Application, Transport, Network, Data link and Physical
b) Presentation, Session, Network, Data link and Physical
c) Presentation, Session, Application, Data link and Physical
d) None of above

P.T.O.

- 9) PSFQ stands for
a) Pump Slow Fetch Quick b) Pump Start Fetch Quick
c) Both a) and b) d) None of the above
- 10) Efficient and time synchronization protocols are necessary to reduce the _____ and _____
a) Latency error and jitters b) SNR and jitter
c) Cross connection and jitter d) None of the above
- 11) MAC stands for
a) Medium Access Control b) Medium Action Control
c) Medium Access Character d) None of the above
- 12) _____ MAC protocol is widely used in modern cellular communication systems.
a) TDMA b) FDMA c) CDMA d) All of the above
- 13) _____ is the basic task of all MAC protocols.
a) Collision avoidance b) Energy efficiency
c) Scalability d) None of the above
- 14) Main role of time synchronization in distributed networks is to
a) Ensure common time scale for all network nodes
b) Provide right temporal co-ordination among all nodes
c) Both a) and b)
d) None of the above
- 15) BS stands for
a) Base station b) Base service c) Best station d) None of the above
- 16) Clustering in WSN contribute to
a) System scalability b) Life time
c) Energy efficiency d) All of the above
- 17) _____ routing is an efficient way to lower energy consumption within a cluster.
a) Hierarchical b) Hybrid c) Smart d) None of the above
- 18) _____ tags have a transmitter and their own power source.
a) Active RFID b) Passive RFID c) Both a) and b) d) None of the above
- 19) RFID stands for
a) Radio frequency identification b) Radio first identification
c) Both a) and b) d) None of the above
- 20) _____ key element is involved in physical aspects of antennas in energy harvesting.
a) Antenna gain b) Reflection coefficients
c) Polarization d) All of the above

Seat No.

**B.E. (Electronics and Telecommunication Engineering) (Part – II) (New)
Examination, 2016
Elective – II : WIRELESS SENSOR NETWORKS**

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

2. Solve **any four** : **20**
- a) What are the various challenges in Wireless Sensor Networks ?
 - b) Write a note on Energy Consumption of Sensor Nodes.
 - c) Explain the concept of gateway.
 - d) Write a note on time synchronization.
 - e) Explain how to control the topology.
3. Solve **any two** of the following : **20**
- a) Explain optimization goals and figures of merit of network architecture.
 - b) Explain the concept of sensor tasking and control.
 - c) Explain the various enabling technologies for wireless sensor networks.
Mention the various applications of WSN.
4. Solve **any four** : **20**
- a) Explain the concept of low duty cycle in MAC protocol.
 - b) Write a note on Backscatter communication.
 - c) Explain the use of RFID in healthcare.
 - d) What are the various aspects of EMC ?
 - e) Explain any one connection based protocol.
5. Solve **any two** of the following : **20**
- a) Explain IEEE 802.15.4 MAC protocol.
 - b) Explain RFID Physical Layer Design Automation.
 - c) Explain the application of RFID in identification and data capture.

**B.E. (Electronics and Telecommunication Engineering) (Part – II) (New)
Examination, 2016
Elective – II : WIRELESS SENSOR NETWORKS**

Day and Date : Thursday, 24-11-2016

Max. Marks : 100

Time : 3.00 p.m. to 6.00 p.m.

Instructions : 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.

2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) Clustering in WSN contribute to
 - a) System scalability
 - b) Life time
 - c) Energy efficiency
 - d) All of the above
- 2) _____ routing is an efficient way to lower energy consumption within a cluster.
 - a) Hierarchical
 - b) Hybrid
 - c) Smart
 - d) None of the above
- 3) _____ tags have a transmitter and their own power source.
 - a) Active RFID
 - b) Passive RFID
 - c) Both a) and b)
 - d) None of the above
- 4) RFID stands for
 - a) Radio frequency identification
 - b) Radio first identification
 - c) Both a) and b)
 - d) None of the above
- 5) _____ key element is involved in physical aspects of antennas in energy harvesting.
 - a) Antenna gain
 - b) Reflection coefficients
 - c) Polarization
 - d) All of the above
- 6) _____ is a basic unit with on board sensors, processor, memory, wireless modem and power supply.
 - a) Sensor
 - b) Sensor node
 - c) Routing
 - d) None of the above
- 7) Sensor network is subject to a unique set of resource constraints such as
 - a) Finite on board battery power
 - b) Limited n/w connection bandwidth
 - c) Both a) and b)
 - d) None of the above
- 8) Advantage of sensor network is
 - a) Energy
 - b) Detection
 - c) Both a) and b)
 - d) None of the above

P.T.O.

- 9) In wireless adhoc network
a) Access point is not required b) Access point is required
c) Nodes are not required d) None of the above
- 10) The network in which all the nodes are symmetric and there is no central control or hierarchy is
a) MANET b) Client Server Technology
c) Peer to Peer d) None of the above
- 11) In single node architecture, following hardware component is used
a) Controller and memory b) Communication device
c) Sensors/Actuators d) All of the above
- 12) Design and optimization goal for WSNs is
a) QoS support b) Energy efficiency
c) Scalability d) All of above
- 13) In sensor network, _____ layers are required.
a) Application, Transport, Network, Data link and Physical
b) Presentation, Session, Network, Data link and Physical
c) Presentation, Session, Application, Data link and Physical
d) None of above
- 14) PSFQ stands for
a) Pump Slow Fetch Quick b) Pump Start Fetch Quick
c) Both a) and b) d) None of the above
- 15) Efficient and time synchronization protocols are necessary to reduce the _____ and _____
a) Latency error and jitters b) SNR and jitter
c) Cross connection and jitter d) None of the above
- 16) MAC stands for
a) Medium Access Control b) Medium Action Control
c) Medium Access Character d) None of the above
- 17) _____ MAC protocol is widely used in modern cellular communication systems.
a) TDMA b) FDMA c) CDMA d) All of the above
- 18) _____ is the basic task of all MAC protocols.
a) Collision avoidance b) Energy efficiency
c) Scalability d) None of the above
- 19) Main role of time synchronization in distributed networks is to
a) Ensure common time scale for all network nodes
b) Provide right temporal co-ordination among all nodes
c) Both a) and b)
d) None of the above
- 20) BS stands for
a) Base station b) Base service c) Best station d) None of the above

**B.E. (Electronics and Telecommunication Engineering) (Part – II) (New)
Examination, 2016
Elective – II : WIRELESS SENSOR NETWORKS**

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

2. Solve **any four** : **20**
- a) What are the various challenges in Wireless Sensor Networks ?
 - b) Write a note on Energy Consumption of Sensor Nodes.
 - c) Explain the concept of gateway.
 - d) Write a note on time synchronization.
 - e) Explain how to control the topology.
3. Solve **any two** of the following : **20**
- a) Explain optimization goals and figures of merit of network architecture.
 - b) Explain the concept of sensor tasking and control.
 - c) Explain the various enabling technologies for wireless sensor networks.
Mention the various applications of WSN.
4. Solve **any four** : **20**
- a) Explain the concept of low duty cycle in MAC protocol.
 - b) Write a note on Backscatter communication.
 - c) Explain the use of RFID in healthcare.
 - d) What are the various aspects of EMC ?
 - e) Explain any one connection based protocol.
5. Solve **any two** of the following : **20**
- a) Explain IEEE 802.15.4 MAC protocol.
 - b) Explain RFID Physical Layer Design Automation.
 - c) Explain the application of RFID in identification and data capture.

 Time : 3.00 p.m. to 6.00 p.m.

Total Marks : 100

Instructions : 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
 2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) Gaussian density is also known as
 - a) Estimation density
 - b) Parameter density
 - c) Normal density
 - d) All of the above
- 2) Which of the following are frequently nearly identical ?
 - a) Bayesian, HMM
 - b) HMM, Maximum Likelihood
 - c) Newton descent
 - d) Bayesian, Maximum Likelihood
- 3) In decision theory an expected loss is called a risk and $(\alpha_{ij} x)$ is called the
 - a) Conditional risk
 - b) Joint risk
 - c) Marginal risk
 - d) None of the above
- 4) Squared Mahalanobis distance from x to μ is given by
 - a) $r^2 = (x - \mu)^t \Sigma^{-1} (x - \mu)$
 - b) $r^2 = (x + \mu)^t \Sigma^{-1} (x - \mu)$
 - c) $r^2 = (x + \mu)^t \Sigma^{-1} (x + \mu)$
 - d) None of the above
- 5) Suppose we have an HMM, complete with transition probabilities a_{ij} and b_{jk} , determine the probability that a particular sequence of visible states V_T was generated by that model is known as
 - a) The decoding problem
 - b) The learning problem
 - c) The evaluation problem
 - d) None of the above
- 6) HMM have found greatest use in
 - a) Character recognition
 - b) Speech recognition
 - c) Gesture recognition
 - d) Both b) and c)
- 7) Classifier that places a pattern in one of only two categories is called
 - a) Dichotomizer
 - b) Trichomizer
 - c) Economizer
 - d) Chotomizer
- 8) A classifier that uses linear discriminant functions is called
 - a) Minimum-error-rate classifier
 - b) Linear machine
 - c) Hidden Markov model
 - d) All of the above

P.T.O.

- 9) The value of discriminant function $g(x) < 0$, in two-category classifier indicates that
 - a) Sample belongs to w_1
 - b) Sample belong to w_2
 - c) Sample on boundary
 - d) Either a) or b)
- 10) If a and b are vectors, the symmetry property is given as
 - a) $D(a, b) \geq 0$
 - b) $D(a, b) = 0$
 - c) $D(a, b) = D(b, a)$
 - d) All of the above
- 11) Parzen window method is used for
 - a) Estimating error rate
 - b) Estimating nearest neighbour
 - c) Estimating density
 - d) All of the above
- 12) If the sequence has the property that wherever two samples are in the same cluster at level K , they remain together at all higher levels, then sequence is said to be
 - a) Hierarchical clustered
 - b) On-line clustered
 - c) Tree-clustered
 - d) All of the above
- 13) A procedure in which means tend to move so as to minimize a squared-error criterion function is called
 - a) K-means clustering
 - b) Bayes learning
 - c) Hierarchical clustering
 - d) None of these
- 14) If the distance between two samples is significantly large, then they correspond to
 - a) Same cluster
 - b) Different cluster
 - c) Either a) or b)
 - d) None of these
- 15) The representation of hierarchical clustering in a tree form is called
 - a) Graph
 - b) Binary tree
 - c) Dendrogram
 - d) None of these
- 16) An act of taking in raw data and taking the action based on the 'Category' of the pattern is known as
 - a) Image Processing
 - b) Pattern Recognition
 - c) Signal Processing
 - d) None of the above
- 17) For the 'Salmon' and 'Sea bass' fish example length alone is a _____ factor.
 - a) Poor
 - b) Strong
 - c) Not practicable
 - d) None of the above
- 18) In K-means clustering, K refers to
 - a) The no. of sample points
 - b) The no. of clusters
 - c) Samples in the cluster
 - d) None of these
- 19) If X and Y are discrete Random Variables and they are Independent then
 - a) $f(x, y) = f_1(x)$
 - b) $f(x, y) = f_2(x)$
 - c) $f(x, y) = f_1(x) f_2(y)$
 - d) None of the above
- 20) The shape of the cluster is determined by
 - a) Mean vector
 - b) Covariance matrix
 - c) Both a) and b)
 - d) None of the above

Seat No.	
----------	--

B.E. (E & TC) (Part – II) (New) Examination, 2016
PATTERN RECOGNITION (Elective – II)

Day and Date : Thursday, 24-11-2016

Marks : 80

Time : 3.00 p.m. to 6.00 p.m.

SECTION – I

2. Attempt **any four** : **(4×6=24)**

- a) Mention and explain sources of classification error.
- b) Obtain an expression for linear discriminant function for two category case.
- c) Define a) Feature space b) Risk.
- d) Explain accuracy and computational complexity of classifier.
- e) Describe multivariate density.

3. Attempt **any two** : **(2×8=16)**

- a) The joint probability function of two random variables X and Y is given by

$$f(x, y) = \begin{cases} c(x^2 + 2y), & x = 0, 1, 2, y = 1, 2, 3, 4 \\ 0, & \text{otherwise} \end{cases}$$

Find : a) the value of c,

b) $P(X = 2, Y = 3)$,

c) $P(X \leq 1, Y > 2)$, and

d) marginal probability function of X and Y.

- b) Explain minimum error rate classification and minimax criteria.

- c) Explain Hidden Markov Models (HMM) and give HMM forward algorithm.

SECTION – II

4. Attempt **any four** : **(4×6=24)**

- a) Write a note on hierarchical clustering.
- b) Explain Partitional clustering.
- c) Explain statistical pattern recognition briefly.
- d) Explain genetic algorithm in brief.
- e) Explain K-nearest neighbour rule.

5. Attempt **any two** : **(2×8=16)**

- a) How linear classifiers are trained using relaxation procedure ?
- b) Explain Syntactic pattern recognition in brief.
- c) Explain scatter criteria for clustering.

B.E. (E & TC) (Part – II) (New) Examination, 2016
PATTERN RECOGNITION (Elective – II)

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Marks : 80

SECTION – I

2. Attempt **any four** : **(4×6=24)**

- a) Mention and explain sources of classification error.
- b) Obtain an expression for linear discriminant function for two category case.
- c) Define a) Feature space b) Risk.
- d) Explain accuracy and computational complexity of classifier.
- e) Describe multivariate density.

3. Attempt **any two** : **(2×8=16)**

- a) The joint probability function of two random variables X and Y is given by

$$f(x, y) = \begin{cases} c(x^2 + 2y), & x = 0, 1, 2, y = 1, 2, 3, 4 \\ 0, & \text{otherwise} \end{cases}$$

Find : a) the value of c,

b) P (X = 2, Y = 3),

c) P (X ≤ 1, Y > 2), and

d) marginal probability function of X and Y.

- b) Explain minimum error rate classification and minimax criteria.

- c) Explain Hidden Markov Models (HMM) and give HMM forward algorithm.

SECTION – II

4. Attempt **any four** : **(4×6=24)**

- a) Write a note on hierarchical clustering.
- b) Explain Partitional clustering.
- c) Explain statistical pattern recognition briefly.
- d) Explain genetic algorithm in brief.
- e) Explain K-nearest neighbour rule.

5. Attempt **any two** : **(2×8=16)**

- a) How linear classifiers are trained using relaxation procedure ?
- b) Explain Syntactic pattern recognition in brief.
- c) Explain scatter criteria for clustering.

B.E. (E & TC) (Part – II) (New) Examination, 2016
PATTERN RECOGNITION (Elective – II)

Day and Date : Thursday, 24-11-2016
Time : 3.00 p.m. to 6.00 p.m.

Total Marks : 100

Instructions : 1) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
2) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) Classifier that places a pattern in one of only two categories is called
 - a) Dichotomizer
 - b) Trichomizer
 - c) Economizer
 - d) Chotomizer
- 2) A classifier that uses linear discriminant functions is called
 - a) Minimum-error-rate classifier
 - b) Linear machine
 - c) Hidden Markov model
 - d) All of the above
- 3) Gaussian density is also known as
 - a) Estimation density
 - b) Parameter density
 - c) Normal density
 - d) All of the above
- 4) Which of the following are frequently nearly identical ?
 - a) Bayesian, HMM
 - b) HMM, Maximum Likelihood
 - c) Newton descent
 - d) Bayesian, Maximum Likelihood
- 5) The value of discriminant function $g(x) < 0$, in two-category classifier indicates that
 - a) Sample belongs to w_1
 - b) Sample belong to w_2
 - c) Sample on boundary
 - d) Either a) or b)
- 6) If a and b are vectors, the symmetry property is given as
 - a) $D(a, b) \geq 0$
 - b) $D(a, b) = 0$
 - c) $D(a, b) = D(b, a)$
 - d) All of the above
- 7) Suppose we have an HMM, complete with transition probabilities a_{ij} and b_{jk} , determine the probability that a particular sequence of visible states V_T was generated by that model is known as
 - a) The decoding problem
 - b) The learning problem
 - c) The evaluation problem
 - d) None of the above
- 8) HMM have found greatest use in
 - a) Character recognition
 - b) Speech recognition
 - c) Gesture recognition
 - d) Both b) and c)

P.T.O.

- 9) In decision theory an expected loss is called a risk and $(\alpha_{ij} x)$ is called the
- a) Conditional risk
 - b) Joint risk
 - c) Marginal risk
 - d) None of the above
- 10) Squared Mahalanobis distance from x to μ is given by
- a) $r^2 = (x - \mu)^t \Sigma^{-1}(x - \mu)$
 - b) $r^2 = (x + \mu)^t \Sigma^{-1}(x - \mu)$
 - c) $r^2 = (x + \mu)^t \Sigma^{-1}(x + \mu)$
 - d) None of the above
- 11) For the 'Salmon' and 'Sea bass' fish example length alone is a _____ factor.
- a) Poor
 - b) Strong
 - c) Not practicable
 - d) None of the above
- 12) In K-means clustering, K refers to
- a) The no. of sample points
 - b) The no. of clusters
 - c) Samples in the cluster
 - d) None of these
- 13) Parzen window method is used for
- a) Estimating error rate
 - b) Estimating nearest neighbour
 - c) Estimating density
 - d) All of the above
- 14) If the sequence has the property that wherever two samples are in the same cluster at level K, they remain together at all higher levels, then sequence is said to be
- a) Hierarchical clustered
 - b) On-line clustered
 - c) Tree-clustered
 - d) All of the above
- 15) If X and Y are discrete Random Variables and they are Independent then
- a) $f(x, y) = f_1(x)$
 - b) $f(x, y) = f_2(x)$
 - c) $f(x, y) = f_1(x) f_2(y)$
 - d) None of the above
- 16) The shape of the cluster is determined by
- a) Mean vector
 - b) Covariance matrix
 - c) Both a) and b)
 - d) None of the above
- 17) The representation of hierarchical clustering in a tree form is called
- a) Graph
 - b) Binary tree
 - c) Dendrogram
 - d) None of these
- 18) An act of taking in raw data and taking the action based on the 'Category' of the pattern is known as
- a) Image Processing
 - b) Pattern Recognition
 - c) Signal Processing
 - d) None of the above
- 19) A procedure in which means tend to move so as to minimize a squared-error criterion function is called
- a) K-means clustering
 - b) Bayes learning
 - c) Hierarchical clustering
 - d) None of these
- 20) If the distance between two samples is significantly large, then they correspond to
- a) Same cluster
 - b) Different cluster
 - c) Either a) or b)
 - d) None of these

- ### MCQ/Objective Type Questions

Marks : 20

(20×1=20)

- P.T.O.**

- 8) The TMS320C6X fixed point processors execute up to _____, _____ bit per instruction cycle.
a) 8,32 b) 32,8 c) 16,16 d) 16,8
- 9) The C6X pipeline requires _____ phases in decode stage.
a) 2 b) 24 c) 5 d) 6
- 10) _____ independent buses for dual data fetch, instruction fetch and nonintrusive I/O.
a) 4 b) 8 c) 6 d) 16
- 11) DSP processors can be used to implement _____ application.
a) Image processing b) Video processing
c) Signal processing d) All above
- 12) In TMS320C6X internal memory is organized as
a) Separate program and data b) Not separate program and data
c) Only program d) Only data
- 13) The data move (DMOV) instruction can use
a) Either direct and indirect addressing mode
b) Either direct or indirect addressing mode
c) Indirect addressing
d) All above
- 14) The result of operation performed in central ALU are stored into
a) ACC b) ACCB c) TREG0 d) PREG
- 15) SRAM and integrated input output peripherals in ADSP-21061 are
a) Single ported b) Dual ported
c) Single/dual ported d) Both a) and c)
- 16) The TMS 320C6X generation of DSPs is based on _____ architecture.
a) VelociTI b) Velocity c) Velocit d) None
- 17) The _____ permits execution of logical operation on data without affecting the contents of ACC.
a) Parallel logic unit b) Auxiliary ALU
c) Central ALU d) None
- 18) The 320c54 DSP are said to have advanced harvard architecture because
a) They have separate memory bus structure for data and program
b) They have instruction the enable data transfer between the program and data
c) They have same memory bus structure for data and program
d) The contents of program memory cannot copy into data memory or vice versa
- 19) The No. of 32 bit general purpose registers in C6X is
a) 4 b) 8 c) 16 d) 32
- 20) The multipliers multiply _____ X _____ numbers.
a) 16,16 b) 17,17 c) 24,24 d) 32,32

(Elective – II) DSP PROCESSORS AND APPLICATION (New)**

Day and Date : Thursday, 24-11-2016

Marks : 80

Time : 3.00 p.m. to 6.00 p.m.

Instructions : 1) *All questions are compulsory.*
2) *Assume suitable data if necessary.*

SECTION – I

2. Attempt **any four** : **(5×4=20)**

- 1) Compare between fixed point and floating point DSPs.
- 2) Explain different buses of TMS 320C54X with their functions.
- 3) Enlist the features of ADSP-21061.
- 4) Explain the various register used with the ARAU.
- 5) What is the use of floating point DSPs ?

3. Attempt **any two** : **(10×2=20)**

- 1) List relative demerits and merits of RISC and CISC processors.
- 2) Explain memory and IO interface features of ADSP 21061.
- 3) What are the various interrupts supported by 54X DSPs and explain in detail ?

SECTION – II

4. Attempt **any four** : **(5×4=20)**

- 1) Draw Cache Configuration Register (CCFG).
- 2) Explain internal memory organization in 6X DSPs.
- 3) Explain the operation of L2 cache controller.
- 4) Explain FIR implementation using TMS320C6X DSP processor.
- 5) Explain the function of EMIF in C6X.

5. Attempt **any two** : **(10×2=20)**

- 1) Discuss the implementation of FFT algorithms using TMS320C6X DSP processor.
- 2) Draw and explain TMS320C6X with peripherals.
- 3) Explain internal architecture of TMS320C6X processor.

- Instructions:** 1) **All questions are compulsory.**
2) **Assume** suitable data if necessary.
3) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
4) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) The TMS 320C6X generation of DSPs is based on _____ architecture.
a) VelociTI b) Velocity c) Velocit d) None
- 2) The _____ permits execution of logical operation on data without affecting the contents of ACC.
a) Parallel logic unit b) Auxiliary ALU
c) Central ALU d) None
- 3) The 320c54 DSP are said to have advanced harvard architecture because
a) They have separate memory bus structure for data and program
b) They have instruction the enable data transfer between the program and data
c) They have same memory bus structure for data and program
d) The contents of program memory cannot copy into data memory or vice versa
- 4) The No. of 32 bit general purpose registers in C6X is
a) 4 b) 8 c) 16 d) 32
- 5) The multipliers multiply _____ X _____ numbers.
a) 16,16 b) 17,17 c) 24,24 d) 32,32
- 6) The TMS320C6X is _____ processor.
a) Floating point b) Fixed point
c) Floating/fixed point d) All above
- 7) The AR ALU (ARAU) performs _____ arithmetic on _____ numbers.
a) Unsigned, 16 b) Singed, 16 c) Signed, 32 d) Unsigned, 32
- 8) The C6X pipeline requires _____ phases in fetch stage.
a) 2 b) 4 c) 5 d) 6

P.T.O.

- 9) Only data ADSP-21061 is _____ bit processor.
a) 8 b) 16 c) 32 d) 64
- 10) ADSP-21061 is
a) Harvard architecture b) Advanced Harvard architecture
c) Super Harvard architecture d) Both b) and c)
- 11) To use a fixed point DSP device efficiently, one must consider representing filter coefficients and signal samples using
a) Fixed point2's complement representation
b) Fixed point1's complement representation
c) Fixed point2's and 1's complement representation
d) None
- 12) The L2 cache of _____ K word is shared by both program and data memory space.
a) 4 b) 8 c) 16 d) 64
- 13) The TMS320C6X fixed point processors execute up to _____, _____ bit per instruction cycle.
a) 8,32 b) 32,8 c) 16,16 d) 16,8
- 14) The C6X pipeline requires _____ phases in decode stage.
a) 2 b) 24 c) 5 d) 6
- 15) _____ independent buses for dual data fetch, instruction fetch and nonintrusive I/O.
a) 4 b) 8 c) 6 d) 16
- 16) DSP processors can be used to implement _____ application.
a) Image processing b) Video processing
c) Signal processing d) All above
- 17) In TMS320C6X internal memory is organized as
a) Separate program and data b) Not separate program and data

P.T.O.

- 8) The 320c54 DSP are said to have advanced harvard architecture because
- They have separate memory bus structure for data and program
 - They have instruction the enable data transfer between the program and data
 - They have same memory bus structure for data and program
 - The contents of program memory cannot copy into data memory or vice versa
- 9) The No. of 32 bit general purpose registers in C6X is
- 4
 - 8
 - 16
 - 32
- 10) The multipliers multiply _____ X _____ numbers.
- 16,16
 - 17,17
 - 24,24
 - 32,32
- 11) The TMS320C6X is _____ processor.
- Floating point
 - Fixed point
 - Floating/fixed point
 - All above
- 12) The AR ALU (ARAU) performs _____ arithmetic on _____ numbers.
- Unsigned, 16
 - Singed, 16
 - Signed, 32
 - Unsigned, 32
- 13) The C6X pipeline requires _____ phases in fetch stage.
- 2
 - 4
 - 5
 - 6
- 14) Only data ADSP-21061 is _____ bit processor.
- 8
 - 16
 - 32
 - 64
- 15) ADSP-21061 is
- Harvard architecture
 - Advanced Harvard architecture
 - Super Harvard architecture
 - Both b) and c)
- 16) To use a fixed point DSP device efficiently, one must consider representing filter coefficients and signal samples using
- Fixed point2's complement representation
 - Fixed point1's complement representation
 - Fixed point2's and 1's complement representation
 - None
- 17) The L2 cache of _____ K word is shared by both program and data memory space.
- 4
 - 8
 - 16
 - 64
- 18) The TMS320C6X fixed point processors execute up to _____, _____ bit per instruction cycle.
- 8,32
 - 32,8
 - 16,16
 - 16,8
- 19) The C6X pipeline requires _____ phases in decode stage.
- 2
 - 24
 - 5
 - 6
- 20) _____ independent buses for dual data fetch, instruction fetch and nonintrusive I/O.
- 4
 - 8
 - 6
 - 16

**B.E. (Electronics and Telecommunication) (Part – II) Examination, 2016
(Elective – II) DSP PROCESSORS AND APPLICATION (New)**

Day and Date : Thursday, 24-11-2016

Marks : 80

Time : 3.00 p.m. to 6.00 p.m.

Instructions : 1) *All questions are compulsory.*
2) *Assume suitable data if necessary.*

SECTION – I

2. Attempt **any four** : **(5×4=20)**

- 1) Compare between fixed point and floating point DSPs.
- 2) Explain different buses of TMS 320C54X with their functions.
- 3) Enlist the features of ADSP-21061.
- 4) Explain the various register used with the ARAU.
- 5) What is the use of floating point DSPs ?

3. Attempt **any two** : **(10×2=20)**

- 1) List relative demerits and merits of RISC and CISC processors.
- 2) Explain memory and IO interface features of ADSP 21061.
- 3) What are the various interrupts supported by 54X DSPs and explain in detail ?

SECTION – II

4. Attempt **any four** : **(5×4=20)**

- 1) Draw Cache Configuration Register (CCFG).
- 2) Explain internal memory organization in 6X DSPs.
- 3) Explain the operation of L2 cache controller.
- 4) Explain FIR implementation using TMS320C6X DSP processor.
- 5) Explain the function of EMIF in C6X.

5. Attempt **any two** : **(10×2=20)**

- 1) Discuss the implementation of FFT algorithms using TMS320C6X DSP processor.
- 2) Draw and explain TMS320C6X with peripherals.
- 3) Explain internal architecture of TMS320C6X processor.

**B.E. (Electronics and Telecommunication) (Part – II) Examination, 2016
(Elective – II) DSP PROCESSORS AND APPLICATION (New)**

Day and Date : Thursday, 24-11-2016

Total Marks : 100

Time : 3.00 p.m. to 6.00 p.m.

- Instructions:** 1) **All questions are compulsory.**
2) **Assume** suitable data if necessary.
3) Q. No. 1 is **compulsory**. It should be solved in **first 30 minutes** in Answer Book Page No. 3. **Each** question carries **one** mark.
4) **Answer MCQ/Objective type questions on Page No. 3 only.**
Don't forget to mention, Q.P. Set (P/Q/R/S) on Top of Page.

MCQ/Objective Type Questions

Duration : 30 Minutes

Marks : 20

1. Choose the correct answer :

(20×1=20)

- 1) To use a fixed point DSP device efficiently, one must consider representing filter coefficients and signal samples using
 - a) Fixed point2's complement representation
 - b) Fixed point1's complement representation
 - c) Fixed point2's and 1's complement representation
 - d) None
- 2) The L2 cache of _____ K word is shared by both program and data memory space.
 - a) 4
 - b) 8
 - c) 16
 - d) 64
- 3) The TMS320C6X fixed point processors execute up to _____, _____ bit per instruction cycle.
 - a) 8,32
 - b) 32,8
 - c) 16,16
 - d) 16,8
- 4) The C6X pipeline requires _____ phases in decode stage.
 - a) 2
 - b) 24
 - c) 5
 - d) 6
- 5) _____ independent buses for dual data fetch, instruction fetch and nonintrusive I/O.
 - a) 4
 - b) 8
 - c) 6
 - d) 16
- 6) DSP processors can be used to implement _____ application.
 - a) Image processing
 - b) Video processing
 - c) Signal processing
 - d) All above
- 7) In TMS320C6X internal memory is organized as
 - a) Separate program and data
 - b) Not separate program and data
 - c) Only program
 - d) Only data

P.T.O.

- 8) The data move (DMOV) instruction can use
a) Either direct and indirect addressing mode
b) Either direct or indirect addressing mode
c) Indirect addressing
d) All above
- 9) The result of operation performed in central ALU are stored into
a) ACC b) ACCB c) TREG0 d) PREG
- 10) SRAM and integrated input output peripherals in ADSP-21061 are
a) Single ported b) Dual ported
c) Single/dual ported d) Both a) and c)
- 11) The TMS 320C6X generation of DSPs is based on _____ architecture.
a) VelociTI b) Velocity c) Velocit d) None
- 12) The _____ permits execution of logical operation on data without affecting the contents of ACC.
a) Parallel logic unit b) Auxiliary ALU
c) Central ALU d) None
- 13) The 320c54 DSP are said to have advanced harvard architecture because
a) They have separate memory bus structure for data and program
b) They have instruction the enable data transfer between the program and data
c) They have same memory bus structure for data and program
d) The contents of program memory cannot copy into data memory or vice versa
- 14) The No. of 32 bit general purpose registers in C6X is
a) 4 b) 8 c) 16 d) 32
- 15) The multipliers multiply _____ X _____ numbers.
a) 16,16 b) 17,17 c) 24,24 d) 32,32
- 16) The TMS320C6X is _____ processor.
a) Floating point b) Fixed point
c) Floating/fixed point d) All above
- 17) The AR ALU (ARAU) performs _____ arithmetic on _____ numbers.
a) Unsigned, 16 b) Singed, 16 c) Signed, 32 d) Unsigned, 32
- 18) The C6X pipeline requires _____ phases in fetch stage.
a) 2 b) 4 c) 5 d) 6
- 19) Only data ADSP-21061 is _____ bit processor.
a) 8 b) 16 c) 32 d) 64
- 20) ADSP-21061 is
a) Harvard architecture b) Advanced Harvard architecture
c) Super Harvard architecture d) Both b) and c)
